[Operation Squarepeg](#) Aug 01 2020 ? In late January 1944 a force of New Zealand soldiers and Allied specialists undertook a daring behind the lines reconnaissance of the Japanese-held Green Islands of Papua New Guinea. The New Zealand Army's largest amphibious operation of World War II followed two weeks later. The Japanese contested the invasion with air power and inflicted heavy damage on the American cruiser USS St. Louis. After landing, the New Zealanders pushed inland and encountered fanatical Japanese defenders entrenched in thick jungle. Allied engineers—including the famed Seabees—then built airfields, roads and shipping facilities. The seizure of the Green Islands completed the encirclement of the main Japanese base in the South Pacific at Rabaul. A memorable but overlooked action of the Pacific War, "Operation Squarepeg" involved a diverse force of Allied sailors, soldiers and airmen that included Charles Lindbergh and future U.S. president Richard Nixon.

[Automobile Electrical and Electronic Systems](#) Jun 23 2022 Understanding vehicle electrical and electronic systems is core to the work of every motor vehicle mechanic and technician. This classic text ensures that students and practicing engineers alike keep abreast of advancing technology within the framework of the latest FE course requirements. The new edition includes updated and new material throughout, covering recent developments such as microelectronic systems, testing equipment, engine management systems and car entertainment and comfort systems. New self-assessment material includes multiple choice questions on each of the key topics covered. With over 600 clear diagrams and figures the new edition will continue to be the book of choice for many students taking IMI technical certificates and NVQ level qualifications, C&G courses, HNC/D courses, and their international equivalents, and is also ideal for use as a reference book by service department personnel.

[Energy at the End of the World](#) Oct 15 2021 Making local energy futures, from marine energy to hydrogen fuel, at the edge of the world. The islands of Orkney, off the northern coast of Scotland, are closer to the Arctic Circle than to London. Surrounded by fierce seas and shrouded by clouds and mist, the islands seem to mark the edge of the known world. And yet they are a center for energy technology innovation, from marine energy to hydrogen fuel networks, attracting the interest of venture capitalists and local communities. In this book, Laura Watts tells a story of making energy futures at the edge of the world. Orkney, Watts tells us, has been making technology for six thousand years, from arrowheads and stone circles to wave and tide energy prototypes. Artifacts and traces of all the ages—Stone, Bronze, Iron, Viking, Silicon—are visible everywhere. The islanders turned to energy innovation when forced to contend with an energy infrastructure they had outgrown. Today, Orkney is home to the European Marine Energy Centre, established in 2003. There are about forty open-sea marine energy test facilities in the world, many of which draw on Orkney expertise. The islands generate more renewable energy than they use, are growing hydrogen fuel and electric car networks, and have hundreds of locally owned micro wind turbines and a decade-old smart grid. Mixing storytelling and ethnography, empiricism and lyricism, Watts tells an Orkney energy saga—an account of how the islands are creating their own low-carbon future in the face of the seemingly impossible. The Orkney Islands, Watts shows, are playing a long game, making energy futures for another six thousand years.

[Popular Science](#) Sep 14 2021 Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

[Shipbuilding and ship repair workers around the world](#) Sep 26 2022 Seaborne trade is the backbone of the world economy. About 90 percent of world trade is transported by ships. Since World War II, shipbuilding has gone through major changes. While the global construction volume increased enormously, British initial dominance was first undermined by Japanese competition from the 1950s, but then Japan was in turn overtaken by South Korea in the 1990s, only to be outcompeted by the People's Republic of China since the 2008 crisis. Labour processes and employment relations have changed dramatically during these shifts. In twenty-four case studies, covering all continents, this volume reconstructs the development of the world's shipbuilding and ship repairs industries, and the workers' responses to these historical transformations.
