The Inverted Classroom Model Sep 25 2019 Only two years after its first run, the Inverted Classroom Conference has become a familiar event at Marburg University. Most conference participants not only knew about this digital teaching and learning scenario but were experienced users and developers. While during its predecessors most participants wanted to familiarize themselves with the central components of the Inverted Classroom Model, the focus of the 3rd German Inverted Classroom Conference in 2014, to which this conference volume is dedicated, was not only a discussion of variants of the model but also, for the first time, the inclusion of long-term evaluations and aspects of student behavior. This shift of emphasis is reflected in the contributions to this volume. Even though all central aspects of the ICM - content production and delivery, testing, and the in-class phase - are still addressed, we can now find recommendations concerning digital material acquisition, in-class tuition, the role of student tutors as well as first long-term studies about ICM effects. In general then, the focus was much wider than that of the first two ICM-conferences: from a new and originally non-familiar teaching and learning scenario to more general aspects of digitization of teaching and learning in the 21st century.

Second-Trimester Abortion Nov 19 2021 Irvin M. Cushner, MD, MPH It is both remarkable and, at the same time, a sign of this era of rapid change that one can refer back to the "infancy" of a field which has existed for barely more than a decade. Yet, one now reads of the "maturing" of the family planning and abortion fields, both of which were incorporated into our society and integrated into our health care system within the past ten years. Indeed, in the very year that this book is being prepared, we note the tenth anniversaries of several significant events of 1970: 1) the enactment of Title X of the Public Health Service Act, establishing a Federal program in family planning; 2) the first issuance by a major health-related organization (the APHA) of a policy statement advocating repeal of all abortion laws; and 3) the enactment, by New York State, of an abortion law whose only restriction was that it be performed by a licensed physician and the subsequent action, the first by any local health department (New York City), to assure both its implementation and its quality. They were, indeed, eventful days. These three events seemed to presage a then-unprecedented acceptance of fertility regulation as a right and as a needed service.

England Feb 29 2020 It provides the first up-to-date and comprehensive picture of the state of regionalism in England. Charting the regionalisation of England that has occurred over recent years, the book: examines the background to the 'English Question'; outlines factors leading to regionalisation in England; presents a new region by region analysis of the social, economic and political conditions; considers the arguments for regional government. Policy makers, practitioners, academics, students, journalists and others who need to understand and keep up to date with the development of governance of the English regions will find this book to be an indispensable resource.

Models of the First-term Reenlistment Decision Oct 07 2020 "Uses data on 4,000 first-term Army, Navy, and Air Force enlisted personnel to construct a model of reenlistment based on survey measures of the value of regular military compensation (RMC), bonuses, in-kind and in-cash allowances, and negative aspects of the service environment. Concludes that reenlistment rates would rise significantly if RMC were increased, but that changes in the other factors would have negligible effect. Reenlistment rates were higher among personnel who received higher bonus payments, among females and nonwhites, and among those who received the dependent quarters allowance in kind instead of in cash. Rates were lower among those who underestimated the value of their compensation, who had completed high school education or more, whose test scores indicated high mental ability, and who served in the Air Force. Although rises in RMC are effective, the authors concluded that shifting to all-cash compensation would entail dislocations that could outweigh the beneficial effects on reenlistment."--Rand abstracts.
