Financial Modernization and Regulation Jan 22 2022 Financial systems around the world are undergoing a process of modernization due to many different forces. Advances in information technology, product and market innovations, and recent regional financial crises have contributed to this movement. As a result, evolution in the financial sector is leading to larger, more complex financial organizations that render inadequate the supervisory and regulatory structures currently in place. While some changes in regulatory policies have already occurred, the adaptation of supervisory oversight and regulation in the face of these new developments is expected to continue for many years to come. This book collects papers originally presented in September 1998 at the Financial Modernization and Regulation Conference co-sponsored by the Federal Reserve Banks of Atlanta and San Francisco. Revised before publication, the papers seek to identify the reasons for changes in the financial services sector, and the implications these changes pose for financial supervision and regulation. Taken together, the papers offer valuable insights on 1) the forces behind financial modernization; 2) the

implications financial modernization poses for corporate structure, market discipline, and financial regulation; 3) how to price deposit insurance accurately to reflect banks' risk-taking; and 4) balancing private versus public interests and managing potentially conflicting public policy goals.

International Competitiveness in Financial Services May 14 2021 financial markets suggests that factors such as differences in capital requirements, limitations on size or on the range of financial activities in which firms can engage, government guarantee arrangements for deposits or payments, and reporting or disclosure requirements can have important effects on the efficiency of industrial and commercial firms and thus on the international competitive positions of major sectors of the U.S. economy. Regulatory and tax policies must therefore take into account effects on international competitive positions in addition to

domestic concerns. The articles in this issue analyze differences in market organization and regulation across countries and examine how efficiency in producing financial services is influenced by these differences. These articles were presented and discussed at a conference sponsored by the American Enterprise Institute in Washington, D.C., on May 31 and June 1, 1990. This conference on International Competitiveness in Financial Services brought to the attention of Washington policy officials these analyses by leading scholars in finance. Publication of these studies and critiques in the Journal of Financial Services Research is intended to stimulate further interest in research on these important issues.
