50 Characteristics for Completing the Puzzle of Life Sep 01 2020 As far back as I can remember, I had a ball of some kind in my hand. Little League was my first experience with a coach, and through the years I found that all my good coaches had one thing in common: They all knew how to motivate their teams. As a twelve-year-old I began to learn more about the most important coach of all: Almighty God. I accepted His Son as my personal savior that year and began to read the Bible. I found throughout my playing days and years of coaching that Gods word uses many of the same motivational words that my former coaches used, which I also use today as a coach. I never dreamed of becoming an author, but one day while walking to school I felt Gods presence. He spoke to me as I walked, and He led me to write about these all important words and how they have influenced my life and the lives of many of my students and athletes.

Mentoring His Way Feb 06 2021 This is one of a three-volume series called, Mentoring His Way - Disciple Twelve based on the "Twelve Characteristics of

a Godly Life." In this first book, we learn about the four "Spiritual Characteristics of a Godly Life." I am a Believer I know Jesus Christ as my personal Lord and Savior The first spiritual characteristic of living a Godly life is about your assurance of knowing Christ as your personal Lord and Savior. To conform to the image of Christ, you need to have no doubts that He is in your life and that you are assured of your relationship with Him and that you have eternal life. I am Empowered I am controlled and empowered by the Holy Spirit The second spiritual characteristic of a Godly life is understanding the power we have available to live the Christian life. Each day we choose to gratify the desires of the flesh or the will of the Spirit. Our spirit is satisfied only when we are totally surrendered to the control of God the Holy Spirit. I am Victorious I have Christ's authority over all the enemy's power The third spiritual characteristic of a Godly life is to apply Christ's power over Satan. People struggle with temptation every day. We can have real victory over sin by exercising Christ's authority over all of Satan's influence. Because we have Christ in us, He gives us the power and authority over the enemy to stop his attacks. I am a Warrior I put on all of God's armor in order to defeat Satan The fourth spiritual characteristic of a Godly life is learning how to put on the full armor of God for warfare against our enemy. God promised a way to keep temptation from becoming so strong that we could not stand up against it. He gave us six pieces of armor and instructions for their use. This gives Christians the ability to walk in the Spirit instead of walking in the flesh. Volume Two covers the "Personal Characteristics of a Godly Life" Volume Three covers the "Lifestyle Characteristics of a Godly Life"

Quality of Life and Other Characteristics of the Elderly Patients With Hip Fracture Jul 23 2022 Quality of Life and Other Characteristics of the Elderly Patients With Hip Fracture Introduction. This study is the first part of the larger study with the aim to assess the quality of life and mortality in elderly patients one year after hip fracture. The baseline data will set the ground for the forthcoming follow up studies in 6 and 12 months after the hip fracture. In Latvia, the quality of life has not been evaluated among the elderly patients after a hip fracture and there is also no information how it changes over the time. Purpose. The aim of this study is to explore the quality of life and other characteristics of elderly patients (> 65 years) after hip fracture. Methods. Participants were patients with a traumatic hip fracture, older than 65 years. Data were collected at the hospital stage. The general quality of life was assessed by World Health Organization Quality of Life Questionnaire (WHOQoL- BREF) and health-related quality of life was assessed by Hip dysfunction and Osteoarthritis Outcome Score (HOOS). For both assessments 100 indicate that there are no problems and 0 indicate extreme problems. Spearman's correlations analysis was performed to assess the relation between subscales of WHOQoL-BREF and HOOS and QoL assessment and satisfaction with state of health. Results. 40 patients with hip fracture at the hospital stage participated in the study. Mean age was 80.08 years (min 65 years and max 93 years). 30 participants were women and 10 participants were men. HOOS scores were (mean scores, (SD)): for pain subscale - 88.4 (18.1), for symptom subscale - 87.6 (15.3), ADL subscale -75.0 (20.2), for sport and recreation -57.8 (28.4), for hip related QoL subscale - 92.1 (17.0). WHOQoL-Bref score were (mean score, (SD))

for physical health subscale - 64,73 (18,06), for psychological health subscale - 58,02 (15,83), for social relationships subscale u2013 70,0 (15,42), for environment subscale u2013 72,97 (12,20) Quality of life assesment were (mean score, (SD))- 71,25 (SD19,24). Satisfation with state of health were (mean score, (SD))- 56,25 (SD22,47).The statistically significant moderate correlation was between Quality of life assesment and all WHOQOL-BREF subscales. The statistically significant weak correlation was between Quality of life assesment and HOOS subscales pain, symptoms, ADL and subscale recreation /sports. The statistically significant weak correlation was between HOOS Hip related Quality of life subscale and WHOQOL-BREF assesment satisfation with state of health.Conclusion. The data will set the ground for forthcoming follow up studies in 6 and 12 months after the hip fracture.

The Intrinsic Value of Nature Feb 24 2020 What is intrinsic value? What is the origin of value? Are people always superior to nature? This book is a philosophical analysis of the human relationship to the non-human world. It is a pioneering study of the philosophy of nature-conservation in relation to the discussion of intrinsic value. Vilkka develops a naturalistic or naturocentric theory of value that is based on ethical extensionism and pluralism. Vilkka analyzes natural values and environmental attitudes: zoocentrism, biocentrism, and ecocentrism. This book forms a taxonomy for nature having intrinsic value. The theory of intrinsic value is based on naturocentric and naturogenic values. The book questions the thesis of weak anthropocentrism that denies the existence of naturogenic values. In Vilkka's theory, animals and nature are the origin of value. She defends the existence of zoogenic and biogenic values in the non-human world and discusses the possibility of ecogenic value, nature as a whole having value independent of human or animal minds. Vilkka analyzes the goodness and rights of nature, the problem of priorities, and ecological humanism. A naturocentric recommendation is that the well-being of animals and nature should have priority over human values at least in some real decision contexts. Ecological humanism recommends an attitude of respect for people, animals, and nature. The book includes an extensive glossary, index, and bibliography.

The Conquest of Life Mar 27 2020

Characteristics of Christ's Teaching Dec 24 2019

EBOOK: Characteristics of Effective Early Learning: Helping young children become learners for life Apr 20 2022 The key argument of *The Characteristics of Effective Early Learning* is that how children learn is as important as what they learn. This book helps you understand how to support the learning and development of young children through promoting the characteristics of effective early learning: play and exploring, active learning, and creating and thinking critically. The book: Investigates how children engage in learning through playing and exploring, and are motivated through active learning Explores how children become creative and critical thinkers able to review their own learning and thinking, imaginatively solving problems and excited by their own Examines appropriate approaches to observation, assesment and planning Supports practitioners in reporting on how children demonstrate these characteristics for the revised EYFS profile Rich in practical examples and case studies, this is an essential read for early

years students and practitioners who want to find out more about how to promote the characteristics of effective early learning in their practice. Contributors: Di Chilvers, Clare Crowther, Kim Porter, Sue Rogers, Judith Stevens, Nancy Stewart, David Whitebread "This is such a useful addition to other publications which clarify, enrich and expand on messages in the revised Early Years Foundation stage. A range of early years experts offer valuable insights on important topics linked to young children learning. The contributors write authoritatively drawing on historical studies as well as more current research. Authentic case studies vividly illustrate theoretical points. Helen sets the stage beautifully, providing a rationale, structure and sequence to a book which truly and lovingly celebrates the processes of children's unfolding development." Marion Dowling, Early Years Specialist and Vice President of Early Education "An insightful and engaging read for students and professionals within the Early Years sector that brings alive the concepts of effective learning that underpin the Early Years Foundation Stage. The book provides an excellent synthesis of developmental and pedagogic research enabling readers to make connections between theory and practice. One of the great strengths of the book is the way in which young children are celebrated as active and powerful agents in their own learning. The book allows readers to reflect on how adults can build on this to ensure that the potential for learning within each child is fully supported through effective pedagogies as well as in more formal planning and assessment. The contributing authors bring a variety of perspectives and knowledge that combine to illuminate the principles behind effective early years practice and explore how these can be translated into meaningful and supportive experiences for children." Dr Mary Wild, Principal Lecturer, School of Education, Oxford Brookes University, UK "What a wonderful sub-title 'Helping young children to become learners for life'. It is so refreshing to find, (among the plethora of new publications on child development) a book that really sees all children as 'rich children' and describes them as capable and confident learners. All the authors share their knowledge in a highly accessible manner which means I can recommend this book to both our practitioners and students undertaking first degrees and post qualifying courses. The authors clearly identify the qualities and attributes of highly effective learners. They share the view that young children come into Early Childhood Education settings hungry to make sense of relationships and the world they are growing up in. They powerfully describe the kind of skilled educators that children deserve; educators who can harness children's energy, engage with their interests and extend their critical thinking." Dr Margy Whalley, Director of the Pen Green Centre for Children and Families and the Pen Green Research Base

Thermodynamic Dissipation Theory of the Origin and Evolution of Life Jul 19 2019 How did life on Earth arise? This question has captured the imagination of curious minds ever since the dawn of humanity. Countless myths have been told, but a plausible scientific explanation has resisted 160 years of vigorous research since Darwin. Now, for the first time in this book, physicist Karo Michaelian reviews a bold new theory founded on non-equilibrium thermodynamic principles. As with all irreversible processes, life could only arise, proliferate, and evolve by dissipating an external generalized chemical potential. Michaelian identifies this external

potential as the ultraviolet (UV-C) photon potential arriving at Earth's surface during the Archean and the fundamental molecules of life as "self-organized" microscopic dissipative structures, i.e. pigments in the UV-C. The theory is drawing a lot of attention because of its ability to explain many of the salient characteristics of the fundamental molecules of life and because it provides a reason for the evolution of a complex biosphere. Large amounts of empirical data from epochs all the way back to the beginning of life and from some of Michaelian's own experiments all support the new theory. The implications are serious for many contemporary paradigms concerning life and evolution. Even the cherished Darwinian paradigm, with its implicit metaphysical "will to survive," selection only at the level of the organism, and the inescapable tautology in "survival of the survivors" (irrespective of Popper's recanting) must be reformulated on thermodynamic principles, and the way to accomplish this is presented in the book. Michaelian concludes that life similar, and not so similar, to our own should exist everywhere in the Universe wherever there exists the organic elements, UV-C light, and a dissipative solvent medium. In fact, he suggests that we have already discovered extraterrestrial life on other planets of our own solar system, and even within the galactic interstellar clouds of gas and dust, but have yet to recognize it as such under the old paradigms. A program for best searching for this extraterrestrial life at the different stages of its dissipation development is detailed within the book. Karo Michaelian has Ph.D. in physics from the University of Alberta, Canada and has worked at various research institutes throughout the world in topics ranging from nuclear physics and nanoparticles to complex systems and non-equilibrium thermodynamics. His book makes fascinating reading in understandable language for the serious amateur but also contains much detail, including mathematical derivation of thermodynamic principles, for the professional who wants an in-depth understanding. The book contains 422 pages with 140 images and diagrams and 414 references. A detailed historical sketch of origin and evolution of life research is presented and critically analyzed, including; Ideas from Antiquity, Darwinian Theory, the Miller Experiments, the RNA World, Panspermia, and Gaia Theory. The thermodynamic foundations of the new theory are developed in the first 6 chapters and the corroborating evidence presented in the next 12. Another 2 chapters discuss contemporary paradigms in need of reform, and the last discusses dissipative life in other parts of the Universe. Mathematical demonstrations are left to boxes that can be skipped without much loss of continuity of argument. Analogies help to make the theory understandable to those who may not have formal training in mathematics or who lack an understanding of non-equilibrium thermodynamics.

Characteristics of Men, Manners, and Sentiments; Or, The Voyage of Life Oct 26 2022

Inside the Human Body: Characteristics of Cells Science Literacy Grade 5 Children's Biology Books Sep 13 2021 Let's go microscopic inside your body! In this book, you will be learning about the characteristics of the cell, which is the basic unit of life. Learn to identify the structure as well as function of the different cell parts like the cell membrane, cytoplasm, mitochondria and ribosomes. Realize that healthy cells are key to a healthy you. Get a copy of this book and start reading today.

The Special Characteristics of Tornadoes, with Practical Directions for the Protection of Life and Property Jul 31 2020

Cell Structure, Processes, and Reproduction Aug 24 2022 Describes the characteristics of cells and their specialized functions.

Sports for Life Mar 07 2021 Determination, preparation, character, perseverance and attitude. These, along with many other virtues are the characteristics of success when it comes to sports. Can these same characteristics offer an opportunity at success in all aspects of life? Absolutely! This collection of narratives along with the voices of sports, past and present, known and unknown can offer you a greater understanding and perspective on sports, life and success. Used as a daily reader or as an easy read, this book will inspire you to find your motivation, your inspiration and understand the reality of who ultimately controls the most important aspects of your success. You!

21st Century Maritime Silk Road: A Peaceful Way Forward Oct 22 2019 This book focuses on understanding the characteristics of the marine environment; overall characteristic of the marine resources (especially the marine new energy) and their current utilization; important routes, channels, and ports; and the Maritime Silk Road from the perspective of international law. It also discusses the significance and opportunities of the Maritime Silk Road initiative, analyzes the challenges involved in the construction of the Maritime Silk Road and provides corresponding countermeasures. Based on the above research, this book also proposes to construct a comprehensive application platform for the Maritime Silk Road that will be a practical tool for decision-making. This book is one of the series publications on the 21st century Maritime Silk Road (shortened as "Maritime Silk Road"). This series publications cover the characteristics of the marine environment and marine new energy, remote islands and reefs construction, climate change, early warning of wave disasters, legal escort, marine environment and energy big data construction, etc. contributing to the safe and efficient construction of the Maritime Silk Road. It aims to improve our knowledge of the ocean, thus to improve the capacity for marine construction, enhance the viability of remote islands and reefs, ease the energy crisis and protect the ecological environment, improve the quality of life of residents along the Maritime Silk Road, and protect the rights, interests of the countries and regions participating in the construction of the Maritime Silk Road. It will be a valuable reference for decision-makers, researchers, and marine engineers working in the related fields.

Characteristics of Christ's teaching drawn from the Sermon on the Mount Sep 20 2019

A Guinea Pig's History of Biology Oct 14 2021 Over The Last Century We Have Gone From Ignorance As To Why Some Diseases Run In Families To The Availability Of Simple Genetic Tests That Can Be Bought On The Internet. And From Announcements Of The Death Of Darwinism To The Triumph Of The Modern Theory Of Evolution. All This Is Thanks To The Fruit Fly, The Guinea Pig, The Zebra Fish And A Handful Of Other Organisms, Which Have Helped Us Unravel One Of Life S Greatest Mysteries Inheritance. Jim Endersby'S Strikingly Original Book Tells The History Of Modern Biology Through The Stories Of The Animals And Plants That Made It Possible, Showing Hw The Guinea-Pig And Its Colleagues Have Played A Pivotal Role In Our Gradual

Understanding Of What Genes Are And What They Do. By Spending Years Laboriously Breeding These Animals And Plants, Observing The Consequences And Extrapolating Sometimes Quite Wildly From These Observations, Scientists Have Gradually Come To Understand How Inheritance Shapes Generations To Come. In Telling Their Stories, Endersby Reveals The Development Of Perhaps The Most Significant Science Of Our Times. Endersby Traces His Story From Darwin Hand-Pollinating Passion Flowers In His Back-Garden In An Effort To Find Out Whether His Decision To Marry His Cousin Had Harmed Their Children, To Today S High-Tech Laboratories, Full Of Shoals Of Shimmering Zebra Fish, Whose Bodies Are Transparent Until They Are Mature, Allowing Scientists To Watch Every Step As A Single Fertilised Cell Multiplies To Become The Millions Of Specialised Cells That Make Up A New Fish. Each Story Has Piece By Piece Revealed How Dna Determines The Characteristics Of The Adult Organism. Not Every Organism Was As Cooperative As The Fruit Fly Or Zebra Fish, Some Provided Scientists With Misleading Answers Or Encouraged Them To Ask The Wrong Questions. Entertaining, Surprising And Enlightening By Turns, This Unusual And Original View Of The Science Of Life Also Challenges Us To Consider The Ethical Dilemmas That Biology Presents Today When We Have The Capacity As Never Before To Change The Very Nature Of Living Things.

The Explosion of Life Forms Sep 25 2022 One of the essential characteristics of living beings is the explosion of variety in their forms that is intrinsically linked to the diversity of the environments they have adapted to. This book, the result of collaboration between international specialists, analyzes the multiplicity of these morphologies. It explores the origin of forms, their role in defining living things, and the relationship between form and function. It exposes the role of genes and epigenetics and examines the forms of bacteria, protists and plants. *The Explosion of Life Forms* also studies the memory of animals and their sensory processes, the forms of robots (built in the image of living things), and medical technologies aimed at restoring damaged living forms. Finally, this work questions a common principle of construction in the diversity of forms, as well as the idea of an abandonment of the form, a possible hidden defect of some modern philosophies.

The Life, Times, and Characteristics of John Bunyan Jun 10 2021 This is a reproduction of the original artefact. Generally these books are created from careful scans of the original. This allows us to preserve the book accurately and present it in the way the author intended. Since the original versions are generally quite old, there may occasionally be certain imperfections within these reproductions. We're happy to make these classics available again for future generations to enjoy!

A Closer Look at Living Things Feb 18 2022 Life comes in all shapes and forms, and living entities dwell in all types of habitats. There are seven characteristics that all life forms share—the ability to move, to sense, to respire, to consume nutrition, to grow, to reproduce, and to excrete waste matter. Complete with annotated illustrations that clarify complex structures and life processes, this volume surveys the parts, characteristics, and classifications of various living things and explores the evolution of life in general.

Euthanasia and Other Medical Decisions Concerning the End of Life Jun 17 2019

Life and Labor Jul 11 2021 This Is A New Release Of The Original 1888 Edition.

Kingdoms and Domains Jan 17 2022 Now published by Academic Press and revised from the author's previous *Five Kingdoms* 3rd edition, this extraordinary, all inclusive catalogue of the world's living organisms describes the diversity of the major groups, or phyla, of nature's most inclusive taxa. Developed after consultation with specialists, this modern classification scheme is consistent both with the fossil record and with recent molecular, morphological and metabolic data. Generously illustrated, now in full color, *Kingdoms and Domains* is remarkably easy to read. It accesses the full range of life forms that still inhabit our planet and logically and explicitly classifies them according to their evolutionary relationships. Definitive characteristics of each phylum are professionally described in ways that, unlike most scientific literature, profoundly respect the needs of educators, students and nature lovers. This work is meant to be of interest to all evolutionists as well as to conservationists, ecologists, genomicists, geographers, microbiologists, museum curators, oceanographers, paleontologists and especially nature lovers whether artists, gardeners or environmental activists. *Kingdoms and Domains* is a unique and indispensable reference for anyone intrigued by a planetary phenomenon: the spectacular diversity of life, both microscopic and macroscopic, as we know it only on Earth today. • New Foreword by Edward O. Wilson • The latest concepts of molecular systematics, symbiogenesis, and the evolutionary importance of microbes • Newly expanded chapter openings that define each kingdom and place its members in context in geological time and ecological space • Definitions of terms in the glossary and throughout the book • Ecostrips, illustrations that place organisms in their most likely environments such as deep sea vents, tropical forests, deserts or hot sulfur springs • A new table that compares features of the most inclusive taxa • Application of a logical, authoritative, inclusive and coherent overall classification scheme based on evolutionary principles

Abiogenesis Aug 12 2021 Abiogenesis has become a maturing field of study as an alternative to the creationist or intelligent design theory of the origin of life on earth. Abiogenesis, Biopoiesis or OoL (Origins of Life), is the natural process of life arising from non-living matter, such as simple organic compounds. It is thought to have occurred on Earth between 3.8 and 4.1 billion years ago. Abiogenesis is studied through a combination of laboratory experiments and extrapolation from the characteristics of modern organisms, and aims to determine how pre-life chemical reactions gave rise to life on Earth. The study of abiogenesis involves geophysical, chemical, and biological considerations, with more recent approaches attempting a synthesis of all three. Many approaches investigate how self-replicating molecules, or their components, came into existence. It is generally thought that current life on Earth is descended from an RNA world, although RNA-based life may not have been the first life to have existed. The classic Miller-Urey experiment and similar research demonstrated that most amino acids, the basic chemical constituents of the proteins used in all living organisms, can be synthesized from inorganic compounds under conditions intended to replicate those of the early Earth. Various external sources of energy that may have triggered these reactions have been proposed, including

lightning and radiation. Other approaches ("metabolism-first" hypotheses) focus on understanding how catalysis in chemical systems on the early Earth might have provided the precursor molecules necessary for self-replication. Complex organic molecules have been found in the Solar System and in interstellar space, and these molecules may have provided starting material for the development of life on Earth. The panspermia hypothesis alternatively suggests that microscopic life was distributed to the early Earth by meteoroids, asteroids and other small Solar System bodies and that life may exist throughout the Universe. Given the revised and more accurate models of "The Drake Equation" and the knowledge gained on the Tardigrade species, it is very probable that some simple form of life has been deposited on earth via asteroids, meteorites or some similar phenomena. It is speculated that the biochemistry of life may have begun shortly after the Big Bang, 13.8 billion years ago, during a habitable epoch when the age of the universe was only 10 to 17 million years. The panspermia hypothesis therefore answers questions of where, not how, life came to be; it only postulates that life may have originated in a locale outside the Earth. Currently, Earth remains the only place in the Universe observed to harbor life, and fossil evidence from the Earth supplies most studies of abiogenesis. Precambrian stromatolites were found in the Siyeh Formation of The Glacier National Park. A paper in the scientific journal "Nature" 2002 suggested that these 3.5 Ga (billion years) old geological formations contain fossilized cyanobacteriamicrobes. This suggests they are evidence of one of the earliest known life forms on Earth. The age of the Earth is about 4.54 billion years; the earliest undisputed evidence of life on Earth dates from at least 3.5 billion years ago, and possibly as early as the Eoarchean Era, after a geological crust started to solidify following the earlier molten Hadean Eon. Microbial mat fossils have been found in 3.48 billion-year-old sandstone in Western Australia. Other early physical evidence of biogenic substances includes graphite discovered in 3.7 billion-year-old metasedimentary rocks in southwestern Greenland, as well as "remains of biotic life" found in 4.1 billion-year-old rocks in Western Australia. According to one of the researchers, "If life arose relatively quickly on Earth ... then it could be common in the universe." This book discusses the various methods and Evidence for the development of life on Earth by natural means.

The Special Characteristics of Tornadoes Apr 08 2021

15 Characteristics of Effective Pastors Aug 20 2019 The church finds itself in a period of great diversification and multiple expressions. In the midst of great change, we have become confused about what really makes for healthy and authentic pastoral leadership. What are the basic and common characteristics necessary for pastors to be effective? How can lay people understand the pastoral call more fully and partner better with pastors for the health of their church? Here Mannoia and Walkemeyer examine the foundations of pastoral effectiveness and bring together nine experienced pastoral leaders to discuss the basic characteristics that exist in effective pastors. Regardless of context or personality, ineffectiveness in pastors and subsequent ill health in churches is often not the result of a lack of calling, but instead is the result of misappropriated efforts to find success. Let's help those who are called to be good stewards of their

call. And let's help churches have a chance to be healthy under the leadership of effective pastors!

The Characteristics of I Am Mar 19 2022 This book is designed to positively impact the way you think and feel about yourself by using the Word of God. By speaking these confessions over your life everyday you will begin to see yourself as God the Father sees you; therefore changing your life forever.

Sika Deer: Life History Plasticity and Management Jan 05 2021 This book provides complete and up-to-date information on sika deer biology and its management, focusing on their life history with an integrated approach of population dynamics, morphology, genetics, and evolution. The expanding distribution of sika and its increase in population in Japan and other countries are causing damage to agriculture and forestry, impacting ecosystems and affecting other species. We are facing conflicting deer issues regarding the conservation of resource values and pest control of sika deer. This contributed volume compiles new findings focusing on the ecological plasticity of the sika deer. It aims to clarify the ecological characteristics of the deer by integrating studies of different approaches and provides a perspective for their management. The book consists of six parts. Part I introduces the ecological and management background behind the history of sika deer. The following four parts discuss movement ecology (Part II), impact on vegetation and bottom-up effect on sika deer (Part III), impact on ecosystem and its resilience (Part IV), and comparison of life-history characteristics between sika deer and other ungulate species (Part V). The last part (Part VI) covers the science-based management of sika deer. Contributed by recognized experts and young researchers of sika deer, this book appeals to researchers and professionals in wildlife biology and wildlife management, evolution, population dynamics, morphology, genetics, and reproductive physiology.

Adolf Portmann Jun 22 2022 This edited volume is the first specialized book in English about the Swiss zoologist and anthropologist Adolf Portmann (1897–1982). It provides a clarification and update of Portmann's theoretical approach to the phenomenon of life, characterized by terms such as "inwardness" and "self-presentation." Portmann's concepts of secondary altriciality and the social uterus have become foundational in philosophical anthropology, providing a benchmark of the difference between humans and animals. In its content, this book brings together two approaches: historical and philosophical analysis of Portmann's studies in the life sciences and application of Portmann's thought in the fields of biology, anthropology, and biosemiotics. Significant attention is also paid to the methodological implications of his intended reform of biology. Besides contributions from contemporary biologists, philosophers, and historians of science, this volume also includes a translation of an original essay by Portmann and a previously unpublished manuscript from his most remarkable English-speaking interpreter, philosopher Marjorie Grene. Portmann's conception of life is unique in its focus on the phenomenal appearance of organisms. Confronted with the enormous amount of scientific knowledge being produced today, it is even clearer than it was during Portmann's lifetime that although biologists employ physical and chemical methods, biology itself is not (only) physics and chemistry. These exact methods must be applied according to what has meaning for living beings. If biology seeks to

understand organisms as autonomous agents, it needs to take display and the interpretation of appearances as basic characteristics of life. The topic of this book is significantly relevant to the disciplines of theoretical biology, philosophy, philosophical anthropology, and biosemiotics. The recent epigenetic turn in biology, acknowledging the interconnections between organismal development, morphology and communication, presents an opportunity to revisit Portmann's work and to reconsider and update his primary ideas in the contemporary context.

How to Be Successful in Business and in Life Nov 15 2021 While the exact meaning of success naturally differs from person to person, there are a number of universal indicators of success especially fitting in the case of life's two most important arenas: one's personal life, and in the business world. Whether you're just getting started in your quest for ultimate success or you're seeking to kick things up a notch and amass unprecedented levels of personal accomplishment; your success in business and in life depends on how you implement a specific set of seven key characteristics. This book is going to show you exactly how successful people utilize these seven key traits, and how you can adopt and implement these characteristics in your life too.

Improving Life Oct 02 2020 The purpose of this book is to present a way that a person may always have improvement in the quality of life through bringing attention to living the characteristics of the "Fruit of the Spirit" established in Galatians 5:22-23. "But the fruit of the Spirit is love, joy, peace, patience, kindness, goodness, faithfulness, gentleness and self-control. Against such things there is no law." There are suggested ideas for implementing the traits of the Fruit of the Spirit in daily life. Charts are provided to record progress on this implementation for personal reflection and/or small group discussion. A person leans on faith in moments of crisis. If a person consciously makes the characteristics of the "fruit of the spirit" an ongoing response to all situations in life, he will become stronger in his faith and get the best out of life. There is unlimited power when a person has a faith that results in these qualities. Improvement in a person's life can be outward; that is, seen by others. It can also be experienced by the way a person thinks or psychological improvement in a person's personal outlook on life. This can happen, even if there is limited physical improvement; although many studies support the fact that an optimistic outlook has a definite positive impact on physical healing. Faith implies a positive attitude that believes one will always improve, even if very small, until the day one dies. In summary, every person can continually improve his or her life by living by the qualities of the "Fruit of the Spirit" love, joy, peace, patience, kindness, goodness, faithfulness, gentleness and self-control. When you make these qualities a part of everyday life, life becomes the best it can be. This book is an explanation of each characteristic with the challenge and opportunity to implement each as a part of a person's experience. There is also an original oil painting by Dr. Jarvis to represent each characteristic.

The Quality of Life in Asia Nov 03 2020 This book studies and compares quality of life in 29 countries/societies in Asia: Afghanistan, Bangladesh, Bhutan, Brunei, Cambodia, China, Hong Kong, India, Indonesia, Japan, Kazakhstan, Kyrgyzstan, Korea (South), Laos, Malaysia, Maldives, Mongolia,

Myanmar, Nepal, Pakistan, the Philippines, Singapore, Sri Lanka, Taiwan, Tajikistan, Thailand, Turkmenistan, Uzbekistan, and Vietnam. We utilize the AsiaBarometer Surveys conducted annually from 2003 through 2008. We focus on the notion of subjective quality of life and conceptualize it as two levels, global and domain. After we explain about the AsiaBarometer Survey Project, we explore current country profile, demographics, lifestyles, value priorities, specific life domain assessment and overall quality of life. We then estimate the independent effects of demographics, lifestyles, value priorities, life domain assessment on the overall quality of life within each society. As well as comparing the results between nations, we look for key generalized characteristics of life quality for the entire and sub-regions of Asia.

The Life, Times, and Characteristics of John Bunyan, Author of the Pilgrim's Progress Apr 27 2020

Mentoring His Way Volume 2 Dec 16 2021 This is the second of a three-volume series called, Mentoring His Way - Disciple Twelve based on the "Twelve Characteristics of a Godly Life." In this second book, we learn about the four "Personal Characteristics of a Godly Life." Being Physically Pure - I belong to God and honor Him with every part of my body. The first personal characteristic of living a Godly life is about how we are to use our bodies. To exemplify the person of Christ, we need to control our bodies by putting them under the control of the Holy Spirit. The body manifests the values of the spirit and soul. Our values and character are developed deep within our soul. Our character is manifested through the body by our behavior. When the body is under the control of the Holy Spirit, it is an obedient servant. Being Love Motivated - I love my family more than I love myself. The second personal characteristic of a Godly life is understanding the importance of the family. In no other place is it more important to remember that our purpose as Christians is to conform to the image of Christ. To have a Godly life, we need to make love our motive in all relationships, especially relationships within our family. Love needs to be the golden thread that holds our families together. Being Extremely Valued - I know and love who I am in Christ. I am extremely valued. The third personal characteristic of a Godly life is about the person - primarily our self-image. As others emulate our lives, it is important that we exemplify a positive attitude about who we are in Christ. To do this, we must first know how special we are to our Heavenly Father, because of our relationship in Christ. Being Christ-actualized - I am Christ-actualized rather than self-actualized. The fourth personal characteristic of a Godly life is learning how to apply motivation. Motivation is the inner drive in each of us that keeps us continuously striving toward the attainment of the goals we have set until such attainment is achieved. Having a Godly Life means that we are motivated to become like Christ. Volume One covers the "Spiritual Characteristics of a Godly Life." Volume Three covers the "Lifestyle Characteristics of a Godly Life."
