Applied Multivariate Statistics for the Social Sciences, Fifth Edition Aug 26 2022 This best-selling text is written for those who use, rather than develop statistical methods. Dr. Stevens focuses on a conceptual understanding of the material rather than on proving results. Helpful narrative and numerous examples enhance understanding and a chapter on matrix algebra serves as a review. Annotated printouts from SPSS and SAS indicate what the numbers mean and encourage interpretation of the results. In addition to demonstrating how to use these packages, the author stresses the importance of checking the data, assessing

the assumptions, and ensuring adequate sample size by providing guidelines so that the results can be generalized. The book is noted for its extensive applied coverage of MANOVA, its emphasis on statistical power, and numerous exercises including answers to half. The new edition features: New chapters on Hierarchical Linear Modeling (Ch. 15) and Structural Equation Modeling (Ch. 16) New exercises that feature recent journal articles to demonstrate the actual use of multiple regression (Ch. 3), MANOVA (Ch. 5), and repeated measures (Ch. 13) A new appendix on the analysis of correlated observations (Ch. 6) Expanded discussions on obtaining non-orthogonal contrasts in repeated measures designs with SPSS and how to make the identification of cell ID easier in log linear analysis in 4 or 5 way designs Updated versions of SPSS (15.0) and SAS (8.0) are used throughout the text and introduced in chapter 1 A book website with data sets and more. Ideal for courses on multivariate statistics found in psychology, education, sociology, and business departments, the book also appeals to practicing researchers with little or no training in multivariate methods. Prerequisites include a course on factorial ANOVA and covariance. Working knowledge of matrix algebra is not assumed.

Textbook Of Occupational Medicine Practice (Fifth Edition) Nov 17 2021 Following the success of the fourth edition, which was highly commended in the primary health care category for the 2018 British Medical Association (BMA) Medical Book Awards, this fifth edition has been substantially revised and updated to reflect significant changes in health care practice and to incorporate the explosion of information since the advent of the fourth industrial revolution and the COVID-19 pandemic. As before, the book covers target organ systems that can be affected by hazardous exposures in traditional industries and modern

workplaces, both of which coexist in different parts of the world and present unique occupational health challenges for the medical practitioner. To this end, this reference textbook focuses on the clinical presentations, investigations, and medical and work-centric management of affected individuals. We have retained consideration of some special issues relevant to occupational medicine practice in this new edition and included a new section relating to the multidisciplinary nature of occupational health practice. The main emphasis continues to be prevention of disease and early detection of health effects caused by work exposures. This edition of the book has been updated to include new information and references. We have kept some of the previous case studies and illustrations, and introduced several new ones, some of which reflect the changes of practice due to the COVID-19 pandemic — for example, in risk communication, recognition and management of the risks of health care and frontline work. We have again asked international experts in occupational medicine and cross-disciplinary medical specialties to jointly author many of the chapters. Some of the authors are from Asia, and others from Europe, the United States, United Kingdom and Australia. All the authors have either clinical and/or academic experience in, or related to occupational medicine practice. The book is targeted at all those who are interested in the interaction between work and health, and how occupational diseases and work-related disorders may present and be managed. It will be of interest to medical practitioners, especially those in primary care and doctors intending to pursue a career in occupational medicine. It would also be relevant for allied health and safety professionals wanting to know more about health effects resulting from occupational exposures. Other groups who may find this edition useful as a ready reference are medical students, occupational health nurses, or clinical specialists in diverse fields such as dermatology, respiratory medicine, infectious diseases or toxicology.
