The Constitutional Foundations of Judicial Review Oct 27 2022

Recent years have witnessed a vibrant debate concerning the constitutional basis of judicial review, which reflects a broader discourse about the role of the courts, and their relationship with the other institutions of government, within the constitutional order. This book comprehensively analyses the foundations of judicial review. It subjects the traditional justification, based on the doctrine of ultra vires, to critical scrutiny and fundamental reformulation, and it addresses the theoretical challenges posed by the impact of the Human Rights Act 1998 on administrative law and by the extension of judicial review to prerogative and non-statutory powers. It also explores the relationship between the theoretical basis of administrative law and its practical capacity to safeguard individuals against maladministration. The book seeks to develop a constitutional rationale for judicial review which finds its legitimacy in core principles such as the rule of law, the separation of powers and the sovereignty of Parliament. It presents a detailed analysis of the interface between constitutional and administrative law, and will be of interest to all public lawyers.

Adsorption on Mesoporous Metal-Organic Frameworks in Solution for Clean Energy, Environment and Healthcare Sep 02 2020 Adsorption and desorption in solution play significant roles in separations, detoxification of waste streams, in purification, chromatography, heterogeneous catalysis, metabolism of medicinal drugs, and beyond. Metal-Organic Frameworks (MOFs) are well-ordered 3-dimensional hybrid organic-inorganic polymers which contain metal cations and the structure-building organic "linker" units. Mesoporous MOFs with pore sizes 2-50 nm are particularly suitable for adsorption and adsorption-based separations of large molecules of organic and bio-organic compounds. Thousands of organic compounds and, in particular, aromatic and heterocyclic compounds are widely used as feedstock for industrial chemical synthesis, as fine chemicals, major components of liquid fossil fuels, dyestuffs, industrial solvents, agricultural chemicals, medicinal drugs, pharmaceuticals and personal care products (PPCPs), and active pharmaceutical ingredients (APIs). There is a strong interest towards synthesis, characterization and studies of both known and newly synthesized mesoporous MOFs for adsorption in solution to achieve the high adsorption capacity, selectivity, and the possibility of multiple regeneration of "spent" sorbent. This book covers experimental fundamental research on using mesoporous MOFs in emerging applications of major industrial, environmental and academic importance, especially purification of water and liquid fossil fuels and in advanced biomedical technologies.

Theory of Solution-Focused Practice Nov 04 2020 This book is the result of a collaboration between a number of authors working as a European Brief Therapy Association (EBTA) task-group. This is the 2020 state of the art version of understanding and learning Solution-Focused Practice. It is applicable to various fields of practice, such as therapy, coaching, supervision, social change, educational work, leadership, and other contexts where a detailed understanding of how to manage and promote change in social systems and communities is of intended. The book presents a coherent theory of solution-focused practice for those who want to understand the rationale, together with a comprehensive description of solution-focused practice that can be used in daily practice or training and for developmental purposes. Theory here is defined as a process theory describing how the solution-focused practice is done, together with explanations of how and why the change process is initiated. This book is also a statement of what solution-focused practice is and what are the sound reasons to use it.
