Nanomedicine Nov 14 2021 Nanomedicine may be defined as the application of nanotechnology to detect and to treat disease. The ability to shape and control matter at the nanoscale presents the opportunity to prevent or to cure disease at its source—at the level of molecular interactions. By delivering nanoparticles into cells, the molecular pathways and interactions that control cell function can be directly influenced, either to restore proper balance or to kill rogue cells, for example, cancer cells. However, our body's natural defences are constantly monitoring for foreign invaders, and our immune system readily attacks nanoparticles. Thus, in pursuing nanotherapeutic treatments, we engage in biological warfare, and the challenge to the nanotechnologist is not only to engineer particles with a specific set of physiochemical characteristics but to also avoid the white blood cell, sentinels which will destroy or remove the particles. In this chapter, I review the basic principles which control nanoparticle dynamics in solution, that is, under conditions appropriate to the body, and highlight the key elements of nanoparticle-cell interactions through examination of a naturally evolved nanoparticle which is highly efficient in controlling cells—the virion, or virus particle.

The Sentinels and Other Stories Dec 03 2020 From The Sentinels: Dunn: There—there was a large glass case in the center of the foyer ... it ... it contained a miniature of the wind farm, as you know. And it—someone had written something on top of it. Some kind of a message. In blood. Detective Shaw: I see. Thank you. Now tell me: what did this message say? Dunn: It ... I don't remember exactly. It was mostly gibberish. Something about 'the Wind' and 'the Way, ' and going in to 'Them.' Something about how 'They' had attached themselves to the turbines—whatever 'They' were. And finally, just a long scrawl, followed by a warning, all in caps, GET OUT OF HERE AS FAST AS YOU CAN. Detective Shaw: I see. And I guess it needs to be asked: Did you? Or did you continue to field the 911 operator's questions? Dunn: No. I dropped the phone as fast as I could and ran out the side door, the one Bobby had gone out. And the first thing I saw was Bobby's pale-blue windbreaker, just thrown aside in the dirt, and further out, his T-shirt, white against the sage. Detective Shaw: It's like he was burning up. Was it hot out? What was the temperature, you think? Dunn: It was cold! No, like I said, it was if the clothes were suffocating him, cutting off his circulation. All I know it that when I reached the T-shirt I saw his belt further out, and beyond that, his shoes, just lying amidst the cheat-grass. That's when I knew something truly terrible had happened, was happening, and that if I didn't find him quickly, he might genuinely hurt himself; though I'd scarcely had the thought when I noticed someone crumpled face down in the sage—not Bobby, this man was fully dressed—and ran to him. Detective Shaw: The other turbine technician. Dunn: Oh, are we done with the ignorant act? Detective Shaw: It was a slip; I'm starting to think about lunch. Okay, and, seeing this, what did you do? Dunn: He wasn't breathing and so I rolled him over. And ... Detective Shaw: Yes? And what? Dunn: Jesus, gods, you know what! Detective Shaw: What did you see when you rolled him over, Dr. Dunn? Dunn: I saw that he had no face. That it ... that it had just spiraled in, like the hole in the boat. That there was a gaping funnel where his eyes and nose and upper lip should have been—mottled red and black, pink and gray—just twisted cartilage and brain tissue. And then his body spasmed, as though by a reflex, and the funnel seemed to burp, spitting up blood. Detective Shaw: Jesus. Dunn: After which, dear God, I can't say, because I was running away as fast as I could; past Bobby's shoes and toward the wind turbine (the one

with the truck parked at its base), as well as past a few dozen new funnels in the ground—which grew in size as I approached from an inch or two across to ones the size of manhole covers. Until I came to the turbine and—stopped dead in my tracks. Because there was Bobby kneeling prone in the dirt, like a Muslim, I suppose, or a Buddhist, but completely nude—bowing before the turbine, the hatch of which was open, seeming almost to pray. Detective Shaw: But ... but all right, in spite of his behavior. Dunn: No, Mr. Shaw, not 'all right.' Because when he sat up again, I saw that his back was ... It was riddled with those same spiral funnels. There were even some in his arms. But—that wasn't all. Because, after he'd stood with some difficulty and turned to face me (he must have sensed my presence; that or saw my shadow), I realized something else. And that was that his eyes had gone completely white—rather they had rolled back in his skull enough so that only the whites were visible—at which moment he spoke and said, calmly, "The turbines, don't look at them. They eat your eyes."

Sentinel for Health Apr 07 2021 In the only history of its kind, Etheridge traces the development of the Centers for Disease Control from its inception as a malaria control unit during World War II through the mid-1980s. The eradication of smallpox, the struggle to identify an effective polio vaccine, the unraveling of the secrets of Legionnaires' disease, and the shock over the identification of the HIV virus are all chronicled here. Drawing on hundreds of interviews and source documents, Etheridge vividly recreates the vital decision-making incidents that shaped both the growth of this institution as well as the state of public health in this country for the last five decades. We follow the development of the institution as it was transformed by the will and the imagination of remarkable individuals such as Dr. Joseph Mountin, one of the first heads of the CDC. Often characterized as abrasive and impatient, Mountin pushed the CDC to become a vital player in eradicating the threat of communicable disease in the United States. Others such as Dr. Alexander Langmuir brought the expertise necessary to establish epidemiology as one of the primary functions of the CDC. Created to serve the states and to answer any call for help whether routine or extraordinary, the CDC is now widely recognized as one of the world's premier public health institutions.

Biopolymer Grafting: Applications Dec 23 2019 Biopolymer Grafting: Applications presents the latest research and developments in the practical application of these methods in industry, both to enable polymer scientists and engineers to keep up with the latest research trends, as well as to propose ideas for further research and application. Research into bio-based polymers has become increasingly prevalent. However, due to challenges related to the properties of these materials compared to synthetic polymers—such as their resistance to chemicals or weather—uptake has not dramatically increased yet. As a result, improvements in surface modification of bio-polymers through graft copolymerization are enormously important, because they will widen the scope of their applications. Relevant industries for application of these methods include automotive, construction, food, packaging, agriculture, textiles and paper. This book provides an overview of the developments made in the area of biopolymer-based graft polymers. Advantages, disadvantages and suggestions for future works are discussed, assisting materials scientists and researchers in mapping out the future of these new "green" materials through value addition to enhance their use. Helps researchers and product developers understand the applications and limitations of biopolymer copolymers or copolymers of natural polymers Offers a roadmap to future applications development in a range of different industries, including automotive, biomedical and packaging Increases familiarity with a range of biopolymer grafting processes, enabling materials scientists and engineers to improve material properties and widen the range of potential biopolymer applications
