Understanding Oct 22 2019 It has long been a matter of concern to teachers in higher education why certain students 'get stuck' at particular points in the curriculum whilst others grasp concepts with comparative ease. This book examines the difficulties of student learning and offers advice on how to overcome them through course design, assessment practice and teaching methods. The Genesis of Technoscientific Revolutions Aug 20 2019 Research powers innovation and technoscientific advance, but it is due for a rethink, one consistent with its deeply holistic nature, requiring deeply human nurturing. Research is a deeply human endeavor that must be nurtured to achieve its full potential. As with tending a garden, care must be taken to organize, plant, feed, and weed—and the manner in which this nurturing is done must be consistent with the nature of what is being nurtured. In *The Genesis of Technoscientific Revolutions*, Venkatesh Narayanamurti and Jeffrey Tsao propose a new and holistic system, a rethinking of the nature and nurturing of research. They share lessons from their vast research experience in the physical sciences and engineering, as well as from perspectives drawn from the history and philosophy of science and technology, research policy and management, and the evolutionary biological, complexity, physical, and economic sciences. Narayanamurti and Tsao argue that research is a recursive, reciprocal process at many levels: between science and technology; between questions and answer finding; and between the

consolidation and challenging of conventional wisdom. These fundamental aspects of the nature of research should be reflected in how it is nurtured. To that end, Narayanamurti and Tsao propose aligning organization, funding, and governance with research; embracing a culture of holistic technoscientific exploration; and instructing people with care and accountability.

Throughout his life, Wittgenstein was obsessed with the problem of the nature of language and the relationship between language and the world. His intellectual journey, one of the most compelling in twentieth century thought, is the detailed adventure told by Gordon Hunnings in The World and Language in Wittgenstein's Philosophy. This book surveys Wittgenstein's elucidation of how the world is represented in language, including the posthumously published material of his middle period. Early in his career, Wittgenstein's answer to the problem explored the representational connection between language and the world through the analogy of propositions as logical

Changes in the Field of Transport Studies

Nov 22 2019 This liber amicorum honours Professor Jan Tissot van Patot as a scholar, referring in particular to his concern with transport economics. The significance of his work grew out of his influence within Netherlands Railways as, with the passage of the years, he dedicated himself increasingly to the vastly wider field of transport economics. I would emphasize, however, that his theoretical knowledge and views in wider contexts have also been of great value to Netherlands Railways, and I greatly appreciate this opportunity of referring to this aspect in a few personal words. It is characteristic both of his person and his attitude that his work was often the occasion for contacts of a more personal nature, contacts which were profoundly marked by his philosophy and convictions. Our relations date from more than thirty-seven years ago, when he asked me for a contribution for a magazine which he helped to edit at that time and which was concerned with the same field as I was. We became colleagues when he entered the service of NS, the Netherlands

Railways. His sphere of work at that time was such that he was consulted more and more frequently by others. His particular value to NS has been the increased dimension of transport policy and decision making he added to the company's existing policy and decision making. sustainability of Bangladesh's growth model based on exports of ready-made garments. To safeguard its comparative advantage in ready-made garments and diversify its exports basket, Bangladesh needs to increase its competitiveness. Improving logistics performance is an important lever with which to do so. *Moving Forward: Connectivity and Logistics to Sustain Bangladesh's Success* presents a comprehensive assessment of logistics performance and its main determinants. It analyzes freight demand at a spatially disaggregated level, quantifies logistics costs, including the costs of externalities, looks at the factors that determine the stock and quality of infrastructure, and examines the incentives to provide logistics services of a certain type and quality and to charge the observed prices. It also quantifies the potential impacts of removing transport and logistics inefficiencies on Bangladesh's exports and economic geography using a spatial general equilibrium model. Bangladesh's congested, unreliable, and unsophisticated logistics system imposes high costs on the economy. Making it efficient requires a holistic system-wide approach that is based on a comprehensive strategy; improves the quality, capacity, and management of infrastructure; improves the quality and integration of logistics services; and achieves seamless regional connectivity. *Moving Forward* will be of interest to policy makers, private sector practitioners, and academics
