When Technocultures Collide Mar 24 2022 When Technocultures Collide provides rich and diverse studies of collision courses between technologically inspired subcultures and the corporate and governmental entities they seek to undermine. The adventures and exploits of computer hackers, phone phreaks, urban explorers, calculator and computer collectors, "CrackBerry" users, whistle-blowers, Yuppies, zinsters, roulette cheats, chess geeks, and a range of losers and tinkerers feature prominently in this volume. Gary Genosko analyzes these practices for their remarkable diversity and their innovation and leaps of imagination. He assesses the results of a number of operations, including the Canadian stories of Mafiaboy, Jeff Chapman of Infiltration, and BlackBerry users. The author provides critical accounts of highly specialized attributes, such as the prospects of deterritorialized computer mice and big toe computing, the role of electrical grid hacks in urban technopolitics, and whether info-addiction and depression contribute to tactical resistance. Beyond resistance, however, the goal of this work is to find examples of technocultural autonomy in the minor and marginal cultural productions of small cultures, ethico-poetic diversions, and sustainable withdrawals with genuine therapeutic potential to surpass accumulation, debt, and competition. The dangers and joys of these struggles for autonomy are underlined in studies of RIM's BlackBerry and Julian Assange's WikiLeaks website.

FUNDAMENTAL MODELS IN FINANCIAL THEORY Jun 14 2021 This book provides an innovative, integrated, and methodical approach to understanding complex financial models, integrating topics usually presented separately into a comprehensive whole. The book brings together financial models and high-level mathematics, reviewing the mathematical background necessary for understanding these models organically and in context. It begins with underlying assumptions and progresses logically through increasingly complex models to operative conclusions. Readers who have mastered the material will gain the tools needed to put theory into practice and incorporate financial models into real-life investment, financial, and business scenarios. Modern finance's most bothersome shortcoming is that the two basic models for building an optimal investment portfolio, Markowitz's mean-variance model and Sharpe and Treynor's Capital Asset Pricing Model (CAPM), fall short when we try to apply them using Excel Solver. This book explores these two models in detail, and for the first time in a textbook the Black-Litterman model for building an optimal portfolio constructed from a small number of assets (developed at Goldman Sachs) is thoroughly presented. The model's integration of personal views and its application using Excel templates are demonstrated. The book also offers innovative presentations of the Modigliani-Miller model and the Consumption-Based Capital Asset Pricing Model (CCAPM). Problems at the end of each chapter invite the reader to put the models into immediate use. *Fundamental Models in Financial Theory* is suitable for classroom use or as a reference for finance practitioners.

The Black Banners Declassified Feb 20 2022 A new, fully uncensored edition of the definitive insider's account of the War on Terror 'A former FBI agent's memoir on the War on Terror is declassified after 9 years' Time 'One of the most valuable and detailed accounts of its subject to appear in the past decade' Economist The ultimate insider's account of the battle against terrorism, Ali Soufan's revelatory account of his history-making decade as the FBI's lead investigator into al-Qaeda shaped our understanding of counter-terror operations - and led to hard questions being asked of American and British leaders. When *The Black Banners* was first published in 2011, significant portions of the text were redacted. After a CIA review those restrictions have been lifted, and the result is this explosive new edition, *The Black Banners (Declassified)*. Alongside a new foreword by Soufan, the declassified documents uncover shocking details on the use of torture on terror suspects, how these 'enhanced interrogation techniques' failed to secure reliable intelligence, and in fact actively derailed the fight against al-Qaeda. By contrast we see Soufan at work using empathy and intelligent questioning - not force or violence - to extract some of the most important confessions in the war. Taking us from the interrogation rooms where Soufan would share food and films with the suspects so he could bond with them, to the hideouts of bin Laden, Ali Soufan reveals with intimate, first-hand knowledge the unbelievable truth about America's security agencies, 9/11, and the global 'War on Terror'.
