Essential Legal English in Context Oct 26 2019 An essential handbook for international lawyers and students Focusing on vocabulary, Essential Legal English in Context introduces the US legal system and its terminology. Designed especially for foreign-trained lawyers and students whose first language is not English, the book is a must-read for those who want to expand their US legal vocabulary and basic understanding of US government. Ross uses a unique approach by selecting legal terms that arise solely within the context of the levels and branches of US government, including terminology related to current political issues such as partisanship. Inspired by her students' questions over her years of teaching, she includes a vast collection of legal vocabulary, concepts, idioms, and phrasal verbs and unpacks concepts embedded in US case law, such as how the US constitutional separation of powers may affect a court's interpretation of the law. The handbook differentiates basic terms in civil and criminal cases and compares terms that may seem similar because of close spellings but in fact have different meanings. For instance, what is the distinction between "taking the stand" and "taking a stand?" What is the difference between "treaties" and "treatises"? Featuring illustrations and hands-on exercises, Essential Legal English in Context is a valuable self-study resource for those who want to improve their legal English terminology before entering a US law school, studying US law or government, or working as a seconded attorney to a US law firm. Instructors can use the handbook in an introductory US legal English course.

[Achieving Balance through Efficiency Jun 26 2022](#) Those starting a career in teaching will put in an incredible amount of energy into their practice in order to learn their craft and become respected professionals. In many cases, however, this energy is not enough to survive as a teacher. Currently, 1 in 5 new teachers will leave the profession after five years. The purpose of this book is to improve the "survivability" of early career teachers by focusing on one key area: Efficiency or what is referred to as Time Management. This book will examine how teachers can become more efficient in their lesson and unit planning, classroom organization, assessment of their students, how they interact with parents, and even when they search and interview for a job. Special emphasis is placed on one of the most challenging aspects of teaching, classroom behavioral management. The underlying basis for this book is a deep belief that successfully managing time will allow teachers to create a positive balance between one's professional and personal lives. It is all too common to see time-stressed and sleep exhausted teachers lose sight of the reasons they entered teaching, eventually falling out of love with their subject and those they teach. This book will tackle head on the demands that teachers face by posing many detailed, practical solutions to time management problems in a variety of different contexts. These solutions will not only come from the author's own experience preparing New York City science students for over 25 years, but from researchers and veteran teachers and administrators who have published their findings and advice in leading educational journals. It is time to stop procrastinating, and draw upon your inner grit to create order, routines, and systems that can be used successfully in your teaching profession.

Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles Mar 24 2022 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence-based pedagogies in higher education, at something a level approaching large-scale impact. By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation, we aim to change the conversation and focus on how we work and learn together - i.e. extending the implementation and knowledge of co-design methods. In this first edition of our Research Topic on Active Learning, we highlight two (of the three) types of publications we wish to promote. First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community. These types of studies constitute the "practice pull" that we see as a necessary counterbalance to "knowledge push" in a more productive pedagogical innovation ecosystem based on research-practitioner partnerships. Second are studies empirically examining the implementations of evidence-based designs in naturalistic settings and under naturalistic conditions. Interestingly, the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as "in-betweens" straddling the two worlds. As a result, these publications represent both the rigours of research and the pragmatism of reflective practice. In forthcoming editions, we will add to this collection a third type of publication -- design profiles. These will present practitioner-developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners, instructional designers and researchers alike. We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner-researcher interactions that promote co-design in pedagogical innovation.
