Biannually since 1994, the European Conference on Product and Process Modelling in the Building and Construction Industry has provided a review of research, given valuable future work outlooks, and provided a communication platform for future co-operative research and development at both European and global levels. This volume, of special interest to

Advanced Materials '93 Jun 19 2019 Computations, Glassy Materials, Microgravity and Non-Destructive Testing is a compilation of the papers presented during the Third IUMRS International Conference on Advanced Materials International Union of The Materials Research Societies that discussed the concepts and methods behind glassy materials. The book is divided into parts. Part 1 tackles the progresses in sol-gel science and technology; the reaction mechanisms of ormosils and effects of ultrasonic irradiation; and the preparation of different glasses and their properties. Part 2 covers topics such as the neural network system for the identification of materials; the use of computers for simulations of many-body systems; computer system for meeting the supercomputing needs of materials; quality control of materials information by knowledge base; and the development of knowledgebase system for computer-assisted alloy design. Part 3 deals with the properties of different materials, the concepts, and the techniques behind them, and Part 4 discusses the non-destructive evaluation. The text is recommended for chemists and engineers in the field of materials science, especially those who wish to know more about the progress in its field of research.

Standard Handbook of Architectural Engineering Aug 02 2020 This book/disk package offers architects, contractors, and engineers virtually all the structural, mechanical, electrical, lighting, and acoustical design data they may need to solve a huge range of architectural engineering problems with remarkable speed, accuracy, and ease. Packed with vital formulas, innovative design tools, and beautifully illustrated examples, it guides readers through the selection and sizing of virtually any functional component of a building, from shed to skyscraper, anywhere in the world. In addition, powerful calculation software lets users simply enter the name of the component to be designed and values are computed in seconds!

STEP Standard for the Exchange of Product Model Data Feb 08 2021 Die Normenreihe ISO 10303 (STEP) stellt die wesentliche Grundlage der Produktdatentechnologie dar. Mit der zunehmenden Verbreitung in den unterschiedlichsten Ingenieurdisziplinen sind heute Ansätze zur Integration von CA-Systemen ohne STEP undenkbar. Vor diesem Hintergrund stellt die Einführung von STEP für alle technischen Unternehmen sowie auch die Weiterentwicklung der

Produktdatennorm eine große Herausforderung dar. Das vorliegende Buch soll einen fundierten Einblick in die STEP Technologie ermöglichen. Thematische Schwerpunkte wie Leistungsumfang, Implementierung und Normung von STEP werden im Zusammenhang mit industriellen Anforderungen an die Produktdatentechnologie betrachtet und bewertet. Ausgehend von einer Betrachtung industrieller Kooperationsmodelle an den Produktentstehungsprozessen wird die Komplexität sowie der Integrationsbedarf von CA-Systemen und deren Produktdaten dargestellt. Es folgen ausführliche Erläuterungen zu den Inhalten der Normenreihe STEP. Dabei werden auf die Modellierungssprache EXPRESS, den Aufbau und die Inhalte der Datenmodelle sowie die Implementierungsmethoden eingegangen. Die Einbettung von STEP in relevante begleitende Standards wie CORBA, JAVA und SGML sowie unterstützende Technologien wie Internet/Intranet wird ausführlich erläutert. Weitere Schwerpunkte sind die Implementierung von STEP sowie die Einführung bzw. die Anwendung von STEP basierten Softwareprodukten. Beispiele aus der industriellen Einführung und Anwendung von STEP runden das Gesamtbild ab und stellen den Praxisbezug her.

Applications of Thermography for Energy Conservation in Industry Jan 19 2022 Infrared thermography has been developed as a tool to measure the temperature of various types of surfaces. Notable applications include thermal detection of buildings to detect heat losses. It was the intent of the NBS IR program to build on these technologies to assist energy conservation engineers to assess heat losses in industrial plants. Our intent in this project was to survey furnaces and heating systems in addition to electrical and mechanical systems to find areas suggesting energy conserving actions. This survey method described in this paper was carried out in fifteen industrial plants to develop a methodology and examine the feasibility of the approach. In addition to the qualitative survey quantitative data was gathered by calibrating the temperature of the 11 hot spots uncovered in the survey. This information was very useful in developing priorities and estimating the magnitude of the heat loss due to a given defect.

Proceedings of the 4th International Conference on Computer Engineering and Networks Jul 01 2020 This book aims to examine innovation in the fields of computer engineering and networking. The book covers important emerging topics in computer engineering and networking, and it will help researchers and engineers improve their knowledge of state-of-art in related areas. The book presents papers from the 4th International Conference on Computer Engineering and Networks (CENet2014) held July 19-20, 2014 in Shanghai, China.
