Offshore Energy and Marine Spatial Planning Dec 25 2019 The generation of offshore energy is a rapidly growing sector, competing for space in an already busy seascape. This book brings together the ecological, economic, and social implications of the spatial conflict this growth entails. Covering all energy-generation types (wind, wave, tidal, oil, and gas), it explores the direct and indirect impacts the growth of offshore energy generation has on both the marine environment and the existing uses of marine space. Chapters explore main issues associated with offshore energy, such as the displacement of existing activities and the negative impacts it can have on marine species and ecosystems. Chapters also discuss how the growth of offshore energy generation presents new opportunities for collaboration and co-location with other sectors, for example, the co-location of wild-capture fisheries and wind farms. The book integrates these issues and opportunities, and demonstrates the importance of holistic marine spatial planning for optimising the location of offshore energy-generation sites. It highlights the importance of stakeholder engagement in these planning processes and the role of integrated governance, with illustrative case studies from the United States, United Kingdom, northern Europe, and the Mediterranean. It also discusses trade-off analysis and decision theory and provides a range of tools and best practices to inform future planning processes.

[Hermeneutics as a Theory of Understanding, Volume 1](#) Apr 09 2021 Walk with Peter Pokorny in and around his beloved field of hermeneutics as he explores a number of basic issues in understanding--from language in general to the interpretation of the Bible in particular. Pokorny first addresses the world of language, showing the importance of understanding language thoroughly in terms of its vocabulary, syntax, and pragmatics, while keeping a keen eye open for metaphor and myth. Next he focuses on text, examining its graphic character, its misuse, and its silence--its frustrating inability to answer questions posed to it. The third stop on Pokorny's tour--methods of interpretation--looks at translation, rhetorical criticism, and historical methodologies of interpretation. Here he argues not only that the encounter between texts and readers is rife with problems in communication but also that these impediments can be overcome by returning again and again to the text until it makes clear its relevance to the present. In the final segment of his wide-ranging hermeneutical journey, Pokorny examines the nature of interpretation itself, celebrating especially its capacity to bridge the gap--or even the abyss--that divides the world of the text and the lived world of the reader, creating a dialogue between the two that can overcome the silence of the written word.

[The IMLI Manual on International Maritime Law](#) May 22 2022 This three-volume Manual on International Maritime Law presents a systematic analysis of the history and contemporary development of international maritime law by leading contributors from across the world. Prepared in cooperation with the International Maritime Law Institute, the International Maritime Organization's research and training institute, this a uniquely comprehensive study of this fundamental area of international law. Volume III is devoted to the marine environmental law and maritime security law. The first part of Volume III deals in depth with issues of most fundamental importance in the contemporary world, namely how to protect the marine environment from pollution from ships, land-based sources, seabed activities, and from or through air. In explaining these types of pollution, various conventions concluded under the auspices of the IMO (such as MARPOL 73/78 and the 1972 London Convention) and soft law documents are analysed. The volume also includes chapters on the conventions relating to pollution incident preparedness, response, cooperation, and the relevance of regional cooperation. It additionally discusses liability and compensation for pollution damage. The second part of volume III examines an issue of increasing importance in a world threatened by terrorism, piracy, and drug-trafficking. Chapters in this part cover the topics of piracy; stowaways; human trafficking; illicit drugs; terrorism; military uses of the sea; and new maritime security threats, such as the illegal dumping of hazardous wastes and toxic substances, as well as illegal, unreported, and unregulated fishing.

The Complete Pool Manual for Homeowners & Professionals Jul 24 2022 Dan Hardy has used every available resource in his 20-year career as a pool professional to add to his store of knowledge about making and keeping water safe. An untiring and dedicated 'Pool Doctor', he has become the 'go to' man for owners of some of the world's largest, most ornate, and expensive private swimming pools -- including that of award-winning actor Mr John Travolta and his wife, Kelly Preston. Dan started working on pools as a boy in his dad's firm. Not content with doing routine maintenance, he began learning all he could about chemicals, mechanics, and safety. In this book he may just be a lifesaver to pool owners who want to save money on maintenance but need to know how to handle poisons safely. Pool maintenance business owners will want to have this book on hand as an easy guide to repairing filtration and pumps and dealing with serious pool problems. And anyone who wishes to have such a career could have no better mentor than Dan Hardy.
