With weather growing fiercer and electrical grids more overloaded, it's likely to get worse. You can keep your home functioning and safe in a power outage – this book will tell you what your options are. Not just the raucous, industrial-looking generators you may be thinking of, but generators that come in compact sound-proofed boxes and sit ready to turn on immediately and run without any intervention for days if necessary – or for a week or two with just a little routine attention. Or ways to modify a solar or wind power system to serve as a backup. Whether your budget is less than \$1,000 or upwards of \$30,000, whether you need to power just a few essentials or an entire large house or small business, whether you live in the country, suburbs, or city – the answers are here. Home Generator Guide 2013 will tell you how to meet your needs with

power from natural gas, propane, gasoline, diesel fuel, sun, or wind. There's a tremendous range of alternatives. This book tells you what you need to understand them and make an intelligent choice. While it doesn't go into the specifics of particular models or contractors, it tells you how to find them. It lays stress on economics and where you can save money – and where there are hidden pitfalls. Note that Home Generator Guide 2013 is written for readers in North America and a few other places where power is governed by variations on the U.S. National Electrical Code (NEC) or Canadian Electrical Code (CEC). Managing eBook Metadata in Academic Libraries Nov 23 2019 *Managing eBook Metadata in Academic Libraries: Taming the Tiger* tackles the topic of ebooks in academic libraries, a trend that has been welcomed by students, faculty, researchers, and library staff. However, at the same time, the reality of acquiring ebooks, making them discoverable, and managing them presents library staff with many new challenges. Traditional methods of cataloging and managing library resources are no longer relevant where the purchasing of ebooks in packages and demand driven acquisitions are the predominant models for acquiring new content. Most academic libraries have a complex metadata environment wherein multiple systems draw upon the same metadata for different purposes. This complexity makes the need for standards-based interoperable metadata more important than ever. In addition to complexity, the nature of the metadata environment itself typically varies slightly from library to library making it difficult to recommend a single set of practices and procedures which would be relevant to, and effective in, all academic libraries. Considering all of these factors together, it is not surprising when academic libraries find it difficult to create and manage the metadata for their ebook collections. This book is written as a guide for metadata librarians, other technical services librarians, and ancillary library staff who manage ebook collections to help them understand the requirements for ebook metadata in their specific library context, to create a vision for ebook metadata management, and to develop a plan which addresses the relevant issues in metadata management at all stages of the lifecycle of ebooks in academic libraries from selection, to deselection or preservation. Explores the reasons behind creating records for our resources and challenges libraries to think about what that means for their context Discusses the complex nature of academic libraries and the electronic resources

they require Encourages librarians to find their own way to manage metadata

Slow Death by Rubber Duck Fully Expanded and Updated Jan 18 2022 The landmark book about the toxicity of everyday life, updated, revised and re-issued for its 10th anniversary, along with the experiments from Smith and Lourie's second book, *Toxin Toxout*. It's amazing how little can change in a decade. In 2009, a book transformed the way we see our frying pans, thermometers and tuna sandwiches. Daily life was bathing us in countless toxins that accumulated in our tissues, were passed on to our children and damaged our health. To expose the extent of this toxification, environmentalists Rick Smith and Bruce Lourie offered themselves to science and undertook a series of over a dozen experiments to briefly raise their personal levels of mercury, BPA, Teflon and other pollutants. The ease with which ordinary activities caused dangerous levels to build in their bodies was a wake-up call, and readers all over the world responded. But did government regulators and corporations? Ten years later, there is good news. But not much. Concise, shocking, practical and hopeful, this new combined edition of one of the most important books ever published about green living will put the nasty stuff back where it belongs: on the national agenda and out of our bodies.
