Contracts Mar 22 2022 This concise paperback, which will be a valuable supplementary text to any traditional contracts

casebook, combines cases and actual contracts to bring a real-world practical perspective to the first-year contracts classroom. *Contracts: A Transactional Approach* fills the long-felt need by professors, students, and practitioners for a teaching approach to contracts that focuses on practical and transactional skills. *Contracts: A Transactional Approach* introduces business contracts and transactions to the first-year contracts class in a unique fashion: Actually executed agreements between sophisticated parties give students exposure to the sort of agreements they will encounter in practice as either a litigator or a transactional attorney. Agreements are lightly edited and are presented as whole documents unbroken by discussion to force the student to read and analyze contracts in their entirety. Focus points and, where appropriate, practitioner comments before each agreement help focus the student's attention on important concepts. The authors begin with the simplest agreement and iteratively build on the same lessons. The discussion is tailored to basic provisions and their interaction with contract law, enabling students to build familiarity with once seemingly foreign contractual provisions and concepts. Lessons focus on the building block provisions (e.g., recitals, representations, warranties, indemnities, limitations of liability, restrictive covenants, liquidated damages) typically found in sophisticated contracts, including the judicial treatment of those provisions. Practitioner comments from experts in the field provide insight and advice on relevant topics to give a real world and practical perspective and to drive home the relevance of these concepts to students. This book teaches students how to read and understand contracts (and to anticipate how judges may read and understand contracts) so that the student can better draft contracts. Drafting tips are sprinkled throughout the book.

Contracts in Context Jun 13 2021 This new casebook focuses on the transactional nature of contracts. In addition to describing the law of contracts and how the law is applied in litigation, *Contracts in Context: From Transaction to Litigation* explores why parties enter into contracts, how written contracts are customarily structured, and why and how parties use contract design and terms to achieve their goals. It explores how parties “contract around” default requirements of the law, in addition to satisfying mandatory aspects of the law, through contracts. The book describes the role of both the transactional lawyer and litigator in working with contracts. It presents much of the material in expository fashion rather than only or

primarily through cases. It then challenges students to apply that law through transactional and litigation practice and simulation problems. Professors and students will benefit from: Material presented not only on contract law, but also on contract design and terms, so that students understand how contracts and contract law support private ordering by parties Many examples of contract language to demonstrate why and how parties customize contracts to further their goals Discussion of the role of the transactional lawyer in working with contracts so that students can begin to develop important transactional skills and wrestle with some of the professional dilemmas transactional lawyers frequently face Material presented through expository text to give students a more comprehensive and clearer view of what limits the law imposes on their private ordering through contracts and which requirements can be contracted around A large set of problems, many of which involve tasks assigned to new transactional lawyers and litigators, to allow students to learn the material through active participation and critical thinking
