Text comprises the state-of-the-art developments in the field of two wheelers. Detailed explanation on the actual assemblies helps the students to cognize the technology systematically. Although the emphasis has been given to the two wheeler technology, considering the requirement of various syllabi, the last chapter is solely dedicated to three wheeler technology. Chapter-end review questions help students in preparing them for examination by self-assessment method. Primarily designed for the undergraduate and diploma students of automobile engineering, the lucid and simple presentation of the book makes it useful for the commoner, who has keen interest in this area. Legal, Institutional, and Economic Indicators of Forest Conservation and Sustainable Management Sep 25 2019 "This review looks at the Nation's legal, institutional, and economic capacity to promote

forest conservation and sustainable resource management. It focuses on 20 indicators of Criterion Seven of the so-called Montreal Process and involves an extensive search and synthesis of information from a variety of sources. It identifies ways to fill information gaps and improve the usefulness of several indicators. It concludes that there is substantial information about the application of such capacities, although that application is widely dispersed among agencies and private interests; which in turn has led to differing interpretations of the indicators. Individual chapters identify a need to further develop the conceptual foundation on which many of the indicators are predicated. While many uncertainties in the type and accuracy of information are brought to light, the review clearly indicates that legal, institutional, and economic capacities to promote sustainability are large and widely available in both the public and private sectors."--P. vi.
