The Life of Nelson: The Embodiment of the Sea Power of Great Britain Jun 22 2019 Horatio Nelson is the most famous seaman in British history. Many books about him have appeared until today but the study of Alfred Thayer Mahan, published in 1897, is still one of the best written pieces and a standard work in the field of Nelson's biography research. It was part of Mahan's seapower studies and contains Nelson's impressive life story as well as Mahan's own view on naval strategy and warfare tactics. »It is essential to the completeness and rounding off of the author's discussion of the Influence of Sea Power, that he present a study, from his own point of view, of the one man who in himself summed up and embodied the greatness of the possibilities which Sea Power comprehends, - the man for whom genius and opportunity worked together, to make him the personification of the Navy of Great Britain.« Reprint of the original edition from 1897. Volume 1 of 2. Alfred Thayer Mahan (1840-1914) was a US Navy officer and author of influential marine history and strategy books. His work »The Influence of Sea Power upon History«, published in 1890, established the modern US Navy doctrine of maritime predominance: the higher the naval power of a country, the greater its global impact. Mahan's concepts of naval war tactics were adapted by many navies all over the world.

Textbooks on Israel-Palestine Aug 29 2022 How is the Israel/Palestine question narrated in Western academia? What ideas dominate the key textbooks on the subject and what is presented as 'truth'? This book answers these critical questions. It is widely known that Western support of Israel played a vital role in the realization of Zionist objectives in Palestine. But academic support of Israel in the West has been a neglected issue, with Western academic knowledge being regarded as impartial and objective. This book reveals that this understanding of Western academic knowledge is wrong when it comes to the Israel/Palestine question. Rather, knowledge has been biased, misleading, and dogmatic and Western college students are subscribing to 'factual histories' based on theories at best, if not fiction. The book is the first empirical investigation able to document this partial reporting of history. Seyed Hadi Borhani examines the most popular college-level textbooks used to teach the history of the Israel/Palestine in Western universities, combining 'textbook analysis' (to determine how the dominant academic texts report the question) and a 'context analysis' (to identify who 'manufactures' the dominant knowledge). The book provides a historical map of how the Israel-Palestine conflict is understood in the West. The book can be used as a critique for students and professors to use alongside textbooks and is a vital and much-needed intervention into the state of affairs in Western academia.
