The Sustainable City XV Nov 23 2019 Consisting of presented papers from the 15th International Conference on Urban Regeneration and Sustainability, the included works address various aspects of the urban environment and provide solutions leading towards sustainability. Urban areas result in a series of environmental challenges varying from the consumption of natural resources and the subsequent generation of waste and pollution, contributing to the development of social and economic imbalances. As cities continue to grow all over the world, these problems tend to become more acute and require the development of new solutions. The challenge of planning sustainable contemporary cities lies in considering the dynamics of urban systems, exchange of energy and matter, and the function and maintenance of ordered structures directly or indirectly supplied and maintained by natural systems. The task of researchers is to improve the capacity to manage human activities, pursuing welfare and prosperity in the urban environment. Any investigation or planning on a city ought to consider the relationships between the parts and their connections with the living world. The dynamics of its networks (flows of energy matter, people, goods, information and other resources) are fundamental for an understanding of the evolving nature of today's cities. Large cities represent a fertile ground for architects, engineers, city planners, social and political scientists, and other professionals able to conceive new ideas and time them according to technological advances and human requirements. Coastal areas and coastal cities are an important area covered in this volume as they have some specific features. Their strategic location facilitates transportation and the development of related activities, but this requires the existence of large ports, with the corresponding increase in maritime and road traffic and all its inherent negative effects. This requires the development of well-planned and managed urban environments, not only for reasons of efficiency and economics but also to avoid inflicting environmental degradation that causes the deterioration of natural resources, quality of life and human health. These research papers put a focus on sustainability across the multidisciplinary components of urban planning, the challenges presented by the increasing size of cities, the number of resources required and the complexity of modern society.

Studies on the educational quality of schools Aug 25 2022 The priority program 'The educational quality of schools' has been established seven years ago by the German Research Foundation (DFG). The projects in this program investigated conditions inside and outside of school and their impact on the development of mathematical, scientific, and cross-curricular competencies. In this book major findings of the program are presented. The projects not only give an overview of their research questioning methods and findings, but also of approaches and materials that have been developed to support learning and teaching in mathematics and science class rooms. The studies reported here identify factors for weaknesses in the educational outcomes that became apparent in the international comparisons like TIMSS and PISA. The projects, however, provide empirically substantiated units on approaches that can help to improve the educational quality of schools. [Publisher, ed].

Mental Models in Cognitive Science Jun 11 2021 One of the most influential developments in the cognitive sciences in the last 20 years is Phil Johnson-Laird's theory of mental models. This theory aims to provide a detailed account of both reasoning and inference, on the one hand, and language processing on the other. Mental models theory can therefore be regarded as a step toward the much-sought-after unified theory of cognition. This book, to be published on the occasion of Phil Johnson-Laird's sixtieth birthday, provides an overview of the current state of mental models research. It also reflects Phil's influence on the development of cognitive science at a more personal level. The authors include some of Phil's most distinguished collaborators and the majority of his former graduate students, many of whom are now eminent psychologists in their own right. The book contains contributions from North America, Britain, and the rest of Europe, and covers all the main strands of mental models theory.

School Mental Health Jul 20 2019 The realisation that most mental disorders have their onset before the age of twenty-five has focused psychiatric research towards adolescent mental health. This book provides vivid examples of school mental health innovations from eighteen countries, addressing mental health promotion and interventions. These initiatives and innovations enable readers from different regions and disciplines to apply strategies to help students achieve and maintain mental health, enhance their learning outcomes and access services, worldwide. Through case studies of existing programs, such as the integrated system of care approach in the USA, the school-based pathway to care framework in Canada, the therapeutic school consultation approach in Turkey and the REACH model in Singapore, it highlights challenges and solutions to building initiatives, even when resources are scarce. This will be essential reading for educators, health providers, policy makers, researchers and other stakeholders engaged in helping students achieve mental health and enhance their learning outcomes.

Teaching and Learning in a Digital World May 30 2020 This book gathers the Proceedings of the 20th International Conference on Interactive Collaborative Learning (ICL2017), held in Budapest, Hungary on 27-29 September 2017. The authors are currently witnessing a significant transformation in the development of education. The impact of globalisation on all areas of human life, the exponential acceleration of technological developments and global markets, and the need for flexibility and agility are essential and challenging elements of this process that have to be tackled in general, but especially in engineering education. To face these current real-world challenges, higher education has to find innovative ways to quickly respond to them. Since its inception in 1998, this conference has been devoted to new approaches in learning with a focus on collaborative learning. Today the ICL conferences offer a forum for exchange concerning relevant trends and research results, and for sharing practical experience gained while developing and testing elements of new technologies and pedagogies in the learning context.

Teaching Beginning Guitar Class May 10 2021 As guitar instruction increases in popularity in secondary schools, many band, choir, and orchestra teachers are asked to teach guitar. In one helpfully concise volume, Teaching Beginning Guitar Class: A Practical Guide provides all of the practical tools that are necessary to teach guitar in the classroom, especially for music instructors who are not guitar specialists. Formatted to follow the school year from summer planning to opening weeks of the fall semester to a week-to-week timeline for the full school year, Teaching Beginning Guitar Class encompasses all possible needs for a non-guitar playing music instructor navigating the world of guitar instruction in a classroom setting. In twelve expertly organized chapters, author and veteran guitar teacher Bill Swick gives hard and fast guides for instruction, providing reassurance alongside invaluable tips for novice guitar educators. This book addresses questions such as 'I Do Not Play Guitar, Why Do I have to Teach Guitar?'; 'What is the Classroom Lifespan of a Guitar?'; and 'New Students in January?' while also providing practical solutions including basic setup, how to select the correct method book, and equipment maintenance.
