to resist outwardly directed loads imposed on the foundation of a structure, anchor plates play an important role in the design of structures (including seawalls, transmission towers, tunnels, buried pipelines, and retaining walls). Design and Construction of Soil Anchor Plates focuses on the various theories based on the design and construction techniques of anchor plates in soil mechanics. The focus of this reference is on design methods, theories, and procedures for constructing permanent or temporary ground anchors and anchored systems. Topics include: General Requirements of Vertical Anchor Plates and Design Criteria, Estimation of Ultimate Capacity in Vertical

Anchor Plates, General Requirements of Vertical Anchor Plates and Design Criteria, Type and Length of Inclined Anchor Plates, Early Theories on Anchor Plates in Multi-Layers Soil, and Basic Theories on Passive Pressure in Vertical Anchor Plates. With this reference, researchers and designers will find a valuable guide to the various theories, techniques, and equations for anchor design. The Intentional Life Series Jun 02 2020 This set includes all three books of the Intentional Life Series: Soul Passion, Soul Mission, and Soul Vision. Throughout the Ages, humanity has pursued the "meaning of life." However, most of us live decidedly arbitrary lives, muddling through from day to day. In the Intentional Life Series, Dr. Ramesh Richard, who has been called

the layman's Ravi Zacharias, articulates how a meaningful life must be a truly intentional life comprised of passion, mission, and vision. He believes that in order for us to embody our true selves and become what we were designed to be, we must reevaluate that passion, mission, and vision and conform them to God's will. In Soul Passion, Richard argues that even though many of us know there must be something more to life, we stumble about with undirected goals and undiscovered passion. He motivates readers to ask themselves what their passion is -- where they have placed their heart, love, trust, and sufficiency. Discovering your soul passion is the foundation for living a biblically well-built and profitable life. In Soul Mission, Richard explores what it means to have a mission for your life that is in response to God's universal purpose. Readers will find themselves deeply challenged to evaluate why they're here and find assistance with developing their own soul mission. In Soul Vision, Richard closes the trilogy by orienting his

readers to the future, through guidance from the Divine Visionary.

Drainage Infrastructure and Culverts Jul 16 2021 Drainage infrastructure systems (culvert, storm sewer, outfall and related drainage elements) are mostly buried underground and are in need of special attention in terms of proactive/preventive asset management strategy. Drainage infrastructure systems represent an integral portion of roadway assets that routinely require inspection, maintenance, repair and renewal. Further challenges are the wide geospatial distribution of these infrastructure assets and environmental exposure. There has been considerable research conducted on culverts, but mostly looked at the problem from a traditional structural/geotechnical perspective. Asset management procedures for culverts and drainage infrastructure systems are complex issues, and can benefit a great deal from an optimal asset management program that draws from programs pertaining to buried pipes. The first and most important step in an asset

management initiative is the establishment of mechanism for asset inventory and asset conditions in a format compatible with the routine procedures of field operators and inspectors. The first objective of this research project was to develop field protocols and operational business rules for inventory data collection and management and inspection of drainage infrastructures in terms of types of data to be collected, frequency of inspection, and analysis and reporting mechanisms. After review of these protocols by the project oversight committee, a pilot study was conducted to verify efficiency of their implementation. The condition assessment protocol introduced is useful in evaluating the overall condition of culverts and can be used for decision making regarding the repair, renewal or replacement of culverts. For the second objective of this project, investigators examined the inventory and inspection protocols employed by Ohio Department of Transportation (ODOT)

and developed a decision support platform, which establishes a link between the inspection results and appropriate repair, renewal and replacement procedures. After applying the recommended procedures, the transportation agencies can better track the conditions of culverts thereby reducing the risks of culvert failures.
