[A User's Guide to Postcolonial and Latino Borderland Fiction](#) Apr 12 2021 Why are so many people attracted to narrative fiction? How do authors in this genre reframe experiences, people, and environments anchored to the real world without duplicating "real life"? In which ways does fiction differ from reality? What might fictional narrative and reality have in common—if anything? By analyzing novels such as Arundhati Roy's *The God of Small Things*, Amitav Ghosh's *The Glass Palace*, Zadie Smith's *White Teeth*, and Hari Kunzru's *The Impressionist*, along with selected Latino comic books and short fiction, this book explores the peculiarities of the production and reception of postcolonial and Latino borderland fiction. Frederick Luis Aldama uses tools from disciplines such as film studies and cognitive science that allow the reader to establish how a fictional narrative is built, how it functions, and how it defines the boundaries of concepts that appear susceptible to limitless interpretations. Aldama emphasizes how postcolonial and Latino borderland narrative fiction authors and artists use narrative devices to create their aesthetic blueprints in ways that loosely guide their readers' imagination and emotion. In *A User's Guide to Postcolonial and Latino Borderland Fiction*, he argues that the study of ethnic-identified narrative fiction must acknowledge its active engagement with world narrative fictional genres, storytelling modes, and techniques, as well as the way such fictions work to move their audiences.

Strengthening the Rule of Law through the UN Security Council Aug 24 2019 The UN Security Council formally acknowledged an obligation to promote justice and the rule of law in 2003. This volume examines the extent to which the Council has honoured this commitment when exercising its powers under the UN Charter to maintain international peace and security. It discusses both how the concept of the rule of law regulates, or influences, Security Council activity and how the Council has in turn shaped the notion of the rule of law. It explores in particular how this relationship has affected the Security Council's three most prominent tools for the maintenance of international peace and security: peacekeeping, sanctions and force. In doing so, this volume identifies strategies for better promotion of the rule of law by the Security Council. This book will be of interest to scholars and students of international law, international relations, international development and peacekeeping.

God: A User's Guide Oct 19 2021 Jesus spent decades in India. - Ethiopians, not Jews, are the real chosen people. - A religion in Iran predicted the Virgin Birth, hundreds of years before Christ. - Abraham was an Iraqi. - Lenin was a Saint. - Worms have souls. - There's no such thing as the Holy Trinity. - All religions are the same. These are not conspiracy theories – but the genuine beliefs of the some of the world's major religions. In *God: A Users' Guide*, broadcaster Sean Moncrieff takes us through the history and development of the twenty largest religions in the world – in the process demonstrating that the truth is far more compelling than the fictional accounts. In the name of religion, millions have been killed, and millions have been saved. Political dynasties have been built on the back of religious belief, or been destroyed because of them. The history of religion is one of tyranny, betrayal, sacrifice, generosity and faith: where the same 'facts' have often brought believers to dramatically different conclusions. From religions which have a multiplicity of Gods, to religions which have no God at all, *God: A Users' Guide* demonstrates how the vast majority of the world's religions did not develop in isolation, but were influenced by already existing belief systems. We have far more in common than you might think.

Rules in Database Systems Sep 05 2020 This book is the proceedings of a workshop held at Heriot-Watt University in Edinburgh in August 1993. The central theme of the workshop was rules in database systems, and the papers presented covered a range of different aspects of database rule systems. These aspects are reflected in the sessions of the workshop, which are the same as the sections in this proceedings: Active Databases Architectures Incorporating Temporal Rules and Transactions Analysis and Debugging of Active Rules Integrating Graphs/Objects with Deduction Integrating Deductive and Active Rules Integrity Constraints Deductive Databases The incorporation of rules into database systems is an important area of research, as it is a major component in the integration of behavioural information with the structural data with which commercial databases have traditionally been associated. This integration of the behavioural aspects of an application with the data to which it applies in database systems leads to more straightforward application development and more efficient processing of data. Many novel applications seem to need database systems in which structural and behavioural information are fully integrated. Rules are only one means of expressing behavioural information, but it is clear that different types of rule can be used to capture directly different properties of an application which are cumbersome to support using conventional database architectures. In recent years there has been a surge of research activity focusing upon active database systems, and this volume opens with a collection of papers devoted specifically to this topic.

Treaty Interpretation Sep 25 2019 The rules of treaty interpretation codified in the 'Vienna Convention on the Law of Treaties' now apply to virtually all treaties, in an international context as well as within national legal systems, where treaties have an impact on a large and growing range of matters. The rules of treaty interpretation differ somewhat from typical rules for interpreting legal instruments and legislation within national legal systems. Lawyers, administrators, diplomats, and officials at international organisations are increasingly likely to encounter issues of treaty interpretation which require not only knowledge of the relevant rules of interpretation, but also how these rules have been, and are to be, applied in practice. Since the codified rules of treaty interpretation came into decree, there is a considerable body of case-law on their application. This case-law, combined with the history and analysis of the rules of treaty interpretation, provides a basis for understanding this most important task in the application of treaties internationally and within national systems of law. Any lawyer who ever has to consider international matters, and increasingly any lawyer whose work involves domestic legislation with any international connection, is at risk nowadays of encountering a treaty provision which requires interpretation, whether the treaty provision is explicitly in issue or is the source of the relevant domestic legislation. This fully updated new edition features case law from a broader range of jurisdictions, and an account of the work of the International Law Commission in its relation to interpretative declarations. This book provides a guide to interpreting treaties properly in accordance with the modern rules.
