The Gun and the Pen Mar 31 2020 Ernest Hemingway, F. Scott Fitzgerald, and William Faulkner stand as the American voice of the Great War. But was it warfare that drove them to write? Not according to Keith Gandal, who argues that the authors' famous postwar novels were motivated not by their experiences of the horrors of war but rather by their failure to have those experiences. These 'quintessential' male American novelists of the 1920s were all, for different reasons, deemed unsuitable as candidates for full military service or command. As a result, Gandal contends, they felt themselves emasculated--not, as the usual story goes, due to their encounters with trench warfare, but because they got nowhere near the real action. Bringing to light previously unexamined Army records, including new information about the intelligence tests, *The Gun and the Pen* demonstrates that the authors' frustrated military ambitions took place in the forgotten context of the unprecedented U.S. mobilization for the Great War, a radical effort to transform the Army into a meritocratic institution, indifferent to ethnic and class difference (though not to racial difference). For these Lost Generation writers, the humiliating failure vis-?-vis the Army meant an embarrassment before women and an inability to compete successfully in a rising social order, against a new set of people. *The Gun and the Pen* restores these seminal novels to their proper historical context and offers a major revision of our understanding of America's postwar literature.

The Rise of the Human Digital Brain Aug 24 2019 Cover Design By: Rebecca Gibson Jones It is estimated that up to sixty-five percent of children entering grade school this year will end up working in careers that have yet to be created. This is a result, in part, of the rapid advances in technology that have occurred since Apple introduced the iPhone just ten years ago. This technology is not only impacting the way that we

learn or the jobs that we will hold in the future, but it is literally changing the way that we think. As modern technologies are introduced during formative periods of brain development, they are having an impact on traditionally linear patterns of thought. Today's youth no longer process information in the same linear fashion as past generations. This is creating confusion in educational settings that are specifically designed to meet the needs of linear thinkers. Administrators, educators, and parents must learn to better understand these changes in order to create models that will be viable for 21st century learners. We must work together to create systems that will both support and encourage children who literally think differently than those who teach them. *The Rise of the Human Digital Brain: How Multidirectional Thinking is Changing the Way We Learn* contains information about the history of education, the changes in the systems of education over the years, and the impact of technology on learning for 21st century students. It also contains the results of a unique study regarding the impact of iPad instruction on literacy attainment for struggling readers. The hope is that the information contained in this book will cause administrators, educators, parents, and developers of new technologies to take a moment to step back and envision a new model that will revolutionize education across the world. Praise for *The Rise of the Human Digital Brain*: "Beatriz Pacheco's experience as both a researcher and a practitioner in the field of education lends an authenticity to her writing that is both refreshing and enlightening. She has conducted one of the most comprehensive studies to date concerning the use of the iPad for direct instruction, and the results of her study have the potential to influence the teaching of literacy skills on the national level. I highly recommend this book." ~ Michael Gurian, New York Times bestselling author of *The Wonder of Boys* and *The Minds of Girls* "For much of human history adults have looked upon the youth of their era as flawed creatures who fail to measure up to nostalgic standards. Dr. Beatriz Pacheco's *Rise of the Human Digital Brain* guides us to recognize and to understand the elements that make rising generations of young people different from their predecessors. The digital brain prefers collaborative engagement over traditional hierarchy and linear thinking. Anyone with a smart phone has command of massive amounts of data and information, and coming generations will be more creative and more critical. Educational systems must change to meet the needs of a changing time. Any educator would benefit from this book." ~ Tori Murden McClure, President of Spalding University Author of *A Pearl in The Storm* "There is no doubt that the accelerated development of digital technology in our day has profoundly transformed the ways in which human beings interact and how we interpret reality. We live in a new paradigm that demands critical assessment of how we educate the new generations, especially in an era of multidimensional thinking. Beatriz Pacheco's well-researched work insightfully names key questions, poses challenges, and offers ways forward. This book promises to be a key tool in defining the what and the how of education during the rest of the 21st century." ~ Hosffman Ospino Associate Professor of Theology and Education Boston College *Articles on American Literature, 1968-1975* Apr 12 2021 Periodical writings about American authors, written between 1968 and 1975, are catalogued according to author under consideration, with additional lists for various genres and topical aspects of American literature.

For Good Measure Jul 16 2021 The 2009 Commission on the Measurement of Economic Performance and Social Progress ("Stiglitz-Sen-Fitoussi" Commission) concluded that we should move away from over-reliance on GDP when assessing a country's health, towards a broader dashboard of indicators that would reflect concerns such as the distribution of well-being and sustainability in all of its dimensions. This book includes contributions from members of the OECD-hosted High Level Expert Group on the Measurement of Economic Performance and Social Progress, the successor of the Stiglitz-Sen-Fitoussi Commission, and their co-authors on the latest research in this field. These contributions look at key issues raised by the 2009 Commission that deserved more attention, such as how to better include the environment and sustainability in our measurement system, and how to improve the measurement of different types of inequalities, of economic insecurity, of subjective well-being and of trust. A companion volume *Beyond GDP: Measuring What Counts for Economic and Social Performance* presents an overview by the co-chairs of the High Level Expert Group, Joseph E. Stiglitz, Jean-Paul Fitoussi and Martine Durand of the progress accomplished since the 2009 report, of the work conducted by the Group over the past five years, and of what still needs to be done.

Social Progress in Britain Apr 24 2022 In his landmark 1942 report on social insurance Sir William Beveridge talked about the 'five giants on the road to reconstruction' — the giants of Want, Disease, Ignorance, Squalor, and Idleness. Social Progress in Britain investigates how much progress Britain has made in tackling the challenges of material deprivation, ill-health, educational standards, lack of housing, and unemployment in the decades since Beveridge wrote. It also asks how progress in Britain compares with that of peer countries — Canada, France, Germany, Italy, Japan, Sweden and the USA. Has Britain been slipping behind? What has been the impact of the increased economic inequality which Britain experienced in the 1980s — has rising economic inequality been mirrored by increasing inequalities in other areas of life too? Have there been increasing inequalities of opportunity between social classes, men and women, and different ethnic groups? And what have been the implications for Britain's sense of social cohesion?

Nurturing the Souls of Our Children Nov 07 2020 The Sin of Obedience is one of the few works of fiction or non-fiction that looks profoundly and with deep personal reflection into the training of a Catholic priest. The novel, rich and accurate in detail, is the story of a young prodigy torn with between the rigid religious traditions and convictions of his mother and the more-humanity-oriented respect for freedom of his father. Building on his own experiences, including being the subject of sexual abuse by a seminary teacher, the author unfolds a picture of religious life in which the cornerstones of celibacy and a vow of obedience have forced seminarians and priests to make difficult and often impossible decisions in their own personal lives. This well-crafted story enables the reader to go along with a young boy, seminarian and priest on his idealistic pursuit and mission and the consequences he has to face as a result.

trust which would become the Gatsby Charitable Foundation. Gatsby's purpose was ambitious: to make the world a better place by taking on some of the social, economic and scientific challenges that face humanity. In recent years, Gatsby has spent around 50m annually on charitable activities, and by its 50th anniversary in 2017 it will have spent over 1bn on programmes that range from reducing poverty in Africa to raising the standard of technical education, investigating how plants fight disease, and finding out how the brain works. But despite Gatsby's wide reach and the level of its donations, it has always functioned discreetly and out of the public eye. Georgina Ferry's in-depth account reveals its achievements and invites us to question how the super-rich - and even the moderately affluent - might spend their money more wisely and for the common good.

New Directions in Assessing Historical Thinking Feb 08 2021 New technologies have radically transformed our relationship to information in general and to little bits of information in particular. The assessment of history learning, which for a century has valued those little bits as the centerpiece of its practice, now faces not only an unprecedented glut but a disconnect with what is valued in history education. More complex processes—historical thinking, historical consciousness or historical sense making—demand more complex assessments. At the same time, advances in scholarship on assessment open up new possibilities. For this volume, Kadriye Ercikan and Peter Seixas have assembled an international array of experts who have, collectively, moved the fields of history education and assessment forward. Their various approaches negotiate the sometimes-conflicting demands of theoretical sophistication, empirically demonstrated validity and practical efficiency. Key issues include articulating the cognitive goals of history education, the relationship between content and procedural knowledge, the impact of students' language literacy on history assessments, and methods of validation in both large scale and classroom assessments. *New Directions in Assessing Historical Thinking* is a critical, research-oriented resource that will advance the conceptualization, design and validation of the next generation of history assessments.
