first to analyze the partnership between the Navy, industry, and science forged by World War II and responsible for producing submarines in the United States in the period from 1940 through 1961. The naval-industrial complex was not the result of a single historical event. Neither was it a political-economic entity. Instead it was made up of many unique and distinct components, all of which developed simultaneously; each reflected the development, significance, and construction of a particular vessel or technology within its historical context. Together these components emerged from World War II as a network of distinct relationships linked together by the motives of national defense, mutual growth, and profit. None of the major players in the drama planned or predetermined the naval-industrial complex, and it did not conform to the views of any individual or confirm the value of a particular system of management. Instead it grew naturally in response to the political environment, strategic circumstances, and perceived national need, its character defined gradually not only by the demands of international conflict but also by the scores of talented people interested in the problems and possibilities of submarine warfare. Their combined efforts during this short period of time produced remarkable advances in nuclear propulsion, submerged speed, quieting, underwater sound, and weaponry, as well as a greater appreciation within the Navy and the shipbuilding industry for the ocean

Gambling Problems in Youth Sep 02 2020

Howard J. Shaffer, Ph. D. More than 20 years ago, I first noted that young people in North America were growing up in a context of legalized gambling for their entire lifetime. By the 1980s, for young people, gambling had become an average and expectable part of the social landscape. Amid legal opportunities to gamble in all but two of the United States and with illicit opportunities to gamble in every

state, gambling is now ubiquitous in America. With few social sa- tions to limit a young person's interest in gambling—like their adult co- terparts—young people now gamble in larger numbers and for seemingly higher stakes. Gradually, gambling-related problems became more visible for young people and the culture slowly but increasingly took notice. By the late 1990s, every sector of American and Canadian society had started to c- sider the effects of legalized gambling on youth. For different reasons, r- resentatives of the gambling and health care industries led the movement to prevent youthful gambling and reconcile existing problems whenever p- sible. Scientists also recognized that there was much to be learned by stu- ing young gamblers. Toward the end of the 20th century, there was a rapid increase in gambling research focusing on developmental issues; half of what is known about gambling emerged during the 1990s. This volume represents an important event in the continuing growth of a field.

Building American Submarines, 1914-1940 Dec 05 2020 In this volume, Gary E. Weir assesses the Navy's efforts between 1914 and 1940 to develop effective submarines. In particular, the author describes the work of the Navy and private industry that allowed the relatively primitive submersible of the First World War period to be replaced by the fleet submarine that fought in the Second World War. Building American Submarines argues that there was a fundamental shift in the relationship between the Navy and its submarine suppliers during this period. After being completely dependent upon private industry in 1914, the Navy - not industry - controlled the design and construction process by the eve of the Second World War.. As a result, the Navy was able to acquire high-quality submarines to fulfill the nation's strategic requirements. When we entered the Second World War, these new submarines were ready to undertake prolonged and effective antishipping operations in distant waters. That

capability was of enormous importance in the ensuing triumph of American sea power over Imperial Japan. In tracing these developments, the author provides insights into the goals of the naval submarine leaders, the evolution of the American submarine industry, the influence of German undersea technology, and strategic requirements foreseen by naval planners. The Navy's historians hope that this case study of the problems and successes involved in a major weapons acquisition program will be of particular interest to naval personnel involved in that process today, as well as to representatives of the industrial firms that supply the needs of the modern Navy. *Richard Petty* May 30 2020 "A biography of American NASCAR driver Richard Petty"-- Provided by publisher.

To My Dearest Wife, Lide Apr 28 2020 A personal account of Commodore Perry's landmark expedition to Japan and life in the antebellum navy George B. Gideon Jr. served as second assistant engineer aboard the USS Powhatan from 1852 to 1856. From his position on the steam frigate, Gideon traveled to Singapore, Labuan, Borneo, Hong Kong, and many other Asian lands. During his time at sea, Gideon penned dozens of letters to his wife, Lide, back home in Philadelphia. Recently discovered in the attic of his great-great-grandniece, were fifty-one letters penned by Gideon providing thorough and insightful commentary throughout the voyage. Through these correspondences, Gideon laboriously documents the details of his daily life on board, from the food they ate to the technical aspects of his work, as well as observations concerning the historical events unfolding around him, such as Chinese piracy, the Taiping Rebellion, the Crimean War, and the devastation of Shimoda. *To My Dearest Wife, Lide: Letters from George B. Gideon Jr. during Commodore Perry's Expedition to Japan, 1853-1855* is a rare first-person account of the landmark American naval expedition to Japan to establish commercial relations between the two countries. Gideon's letters have been

meticulously transcribed and annotated by the editors and are an invaluable primary historical source. Gideon's letters are candid and revealing, delving into the rampant dysfunction in the navy of the 1850s—sickness and disease, alcohol abuse, and poor leadership, among other challenges. Gideon also unabashedly shares his own cynical views of the navy's role in supporting American economic interests in Japan. This firsthand account of the political mission of the Perry expedition is a unique contribution to naval and military history and gives readers a better view of life aboard a navy ship.
