Applied Conjoint Analysis Feb 19 2022 Conjoint analysis is probably the most significant development in marketing research in the past few decades. It can be described as a set of techniques ideally suited to studying customers' decision-making processes and determining tradeoffs. Though this book is oriented towards methods and applications of conjoint analysis in marketing, conjoint methods are also applicable for other business and social sciences. After an introduction to the basic ideas of conjoint analysis the book describes the steps involved in designing a ratings-based conjoint study, it covers various methods for estimating partworth functions from preference ratings data, and dedicates a chapter on methods of design and analysis of conjoint-based choice experiments, where choice is measured directly. Chapter 5 describes several methods for handling a large number of attributes. Chapters 6 through 8 discuss the use of conjoint analysis for specific applications like product and service design or product line decisions, product positioning and market segmentation decisions, and pricing decisions. Chapter 9 collates miscellaneous applications of marketing mix including marketing resource allocation or store location decisions. Finally, Chapter 10 reviews more recent developments in experimental design and data analysis and presents an assessment of future developments.

Marketing Intelligent Systems Using Soft Computing Mar 28 2020 Dr. Jay Liebowitz Orkand Endowed Chair in Management and Technology University of Maryland University College Graduate School of Management & Technology 3501 University Boulevard East Adelphi, Maryland 20783-8030 USA jliebowitz@umuc.edu When I first heard the general topic of this book, Marketing Intelligent Systems or what I'll refer to as Marketing Intelligence, it sounded quite intriguing. Certainly, the marketing field is laden with numeric and symbolic data, ripe for various types of mining—data, text, multimedia, and web mining. It's an open laboratory for applying numerous forms of intelligentsia—neural networks, data mining, expert systems, intelligent agents, genetic algorithms, support vector machines, hidden Markov models, fuzzy logic, hybrid intelligent systems, and other techniques. I always felt that the marketing and finance domains are wonderful application areas for intelligent systems, and this book demonstrates the synergy between marketing and intelligent systems, especially soft computing. Interactive advertising is a complementary field to marketing where intelligent systems can play a role. I had the pleasure of working on a summer faculty fellowship with R/GA in New York City—they have been ranked as the top interactive advertising agency worldwide. I quickly learned that interactive advertising also takes advantage of data visualization and intelligent systems technologies to help inform the Chief Marketing Officer of various companies. Having improved ways to present information for strategic decision making through use of these technologies is a great benefit.

Surround Sound als Komponente für das immersive Filmerlebnis Jul 24 2022 Studienarbeit aus dem Jahr 2018 im Fachbereich Medien / Kommunikation - Rundfunk und Unterhaltung, Note: 1,3, Hochschule RheinMain, Sprache: Deutsch, Abstract: Ob 3D-Filme oder Virtual Reality Spiele sowie Videos, es ist nicht von der Hand zu weisen, dass das immersive Erlebnis in der Unterhaltungsindustrie sich über eine stetig steigende Beliebtheit und eine damit verbundene Lukrativität für Unternehmen freuen darf. Die zuvor genannten Technologien sind zurzeit deshalb so beliebt, da sie im audiovisuellen Bereich große visuelle Fortschritte erbracht und neue konsumentenfreundliche Unterhaltungsmöglichkeiten eröffnet haben. Mit der Immersion wird das Empfinden des Konsumenten bekräftigt, nicht nur bloßer Beobachter, sondern Bestandteil des Films oder des Spiels zu sein. Wie jedoch auch bei den herkömmlichen audiovisuellen Produkten spielt der Ton eine tragende Rolle, um das Filmerlebnis zu vervollständigen. So soll geprüft werden, in welchem Maße und durch welche Mittel Ton ein immersives Unterhaltungserlebnis erzeugen und intensivieren kann und in wieweit es konsumentenfreundliche Lösungen gibt.
