decisions and get more from technology.

Management of Technology and Innovation in

Japan Jul 19 2019 What Makes this Book

Unique? No crystal ball is required to safely predict, that in the future - even more than in the past - mastered innovativeness will be a primary criterion distinguishing successful from unsuccessful companies. At the latest since Michael Porter's study on the competitiveness of nations, the same criterion holds even for the evaluation of entire countries and national economies. Despite the innumerable number of publications and recommendations on innovation, competitive innovativeness is still a rare competency. The latest publication of UNICE - the European Industry - organization representing 20 million large, midsize and small companies - speaks a clear language: Europe qualifies to roughly 60% (70%) of the innovation strength of the US (Japan). The record unemployment in many EU countries does not contradict this message. A main reason

may be given by the fact that becoming an innovative organization means increased openness towards the new and more tolerance towards risks and failures, both challenging the inherently difficult management art of cultural change. Further, lacking innovativeness is often related to legal and fiscal barriers which rather hinder than foster innovative activities. Yet another reason to explain Europe's notorious innovation gap refers to insufficient financial R&D resources on the company as well as on the national level. As a result, for example, hiring decisions on the level of the European Commission are taken to increase R&D expenditures in the European Union from roughly 2% to 3% of GNP.

PC Mag Jul 31 2020 PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the latest products and services. Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology.
