Naked Economics Sep 26 2019 Warum zahlt der Mann, der im Flugzeug neben Ihnen sitzt, so viel mehr für seinen Sitzplatz (oder auch viel weniger), obwohl er doch dieselbe Strecke zurücklegt und dasselbe Essen serviert bekommt? Was haben Finanzmärkte und Investmentstrategien mit einer Diät gemeinsam? Welchen Platz und Nutzen haben staatliche Einflussnahmen in der ökonomischen Realität der freien Marktwirtschaft? Welche Rolle spielen die amerikanische Fed und verwandte Institutionen wie die Europäische Zentralbank in Bezug auf Inflation und Wirtschaftswachstum? Täglich begegnen uns solche und andere wirtschaftliche Phänomene und häufig stoßen wir an unsere Grenzen, wenn es darum geht, die aufgeworfenen Fragen zu beantworten. Dieses Buch führt Sie durch die wichtigsten Konzepte der Wirtschaft und stellt sie bar der mathematischen Komplexität auf so intuitive und unterhaltsame Weise dar, dass Sie es nicht mehr aus der Hand legen wollen. Ein Buch, das zugleich unterhält, lehrt und

provoziert.

Modernes C++: Concurrency meistern Mar 25 2022 Concurrency mit modernem C++ ist eine Reise durch die bestehende und die zukünftige Nebenläufigkeit in C++. Das Buch erklärt Ihnen die Details zu Nebenläufigkeit in modernem C++ und gibt Ihnen mehr als 100 lauffähige Programme. Damit können Sie die Theorie mit der Praxis verknüpfen um den optimalen Nutzen aus dem Buch zu ziehen. Nebenläufigkeit, Parallelität, Gleichzeitigkeit • C++11 und C++14 besitzen die elementaren Bausteine, um nebenläufige und parallele Programme zu schreiben. • Mit C++17 stehen die parallelen Algorithmen der Standard Template Library (STL) vor der Tür. Das heißt, dass die meisten der Algorithmen der STL sequentiell, parallel oder vektorisiert ausgeführt werden können. • Die Geschichte in C++ geht aber weiter. Dank C++20 können wir auf erweiterte Futures, Coroutinen, Transaktionen und noch viel mehr hoffen. Für C++

Entwickler, die ihr Niveau rund um Gleichzeitigkeit auf das nächste Niveau heben wollen. Gleichzeitigkeit ist neben Security und Verteilung eine der Schlüsselherausforderung der Softwareentwicklung der nächsten mindestens 10 Jahre.

Umweltökonomie und Umweltpolitik Oct 20 2021 Umweltökonomie - neue Aspekte Die rasanten Entwicklungen in der Umweltpolitik in den vergangenen Jahren führten zu umfangreichen Anpassungen in diesem beliebten Lehrbuch, die insbesondere die anwendungsorientierten Abschnitte betreffen. Hier wurden vor allem die Kapitel über die Umweltinstrumente (Auflagen, Steuern, Zertifikate), die Kosten-Nutzen-Analyse sowie die internationalen Umwelaspekte (bspw. Klimakonferenzen) grundlegend aktualisiert. Darüber hinaus enthält das Kapitel zur Ressourcenökonomie nun ebenfalls eine anwendungsbezogene Diskussion. Umweltökonomie - die Schwerpunkte - Spieltheoretische Grundlagen - Theorie externer Effekte - Auflagen - Steuern und Abgaben - Zertifikate - Verhandlungslösungen - Umwelthaftung - Umwelttechnischer Fortschritt - Internationale Aspekte des Umweltproblems - Umweltpolitik bei asymmetrischer Informationsverteilung - Kosten-Nutzen-Analyse - Ressourcenökonomie Zielgruppe Studierende der Volks- und Betriebswirtschaftslehre an Universitäten und Hochschulen sowie interessierte Praktiker in Wirtschaft, Politik und Verwaltung Prof. Dr. Eberhard Feess ist seit 2008 Professor für Managerial Economics an der Frankfurt School of Finance and Management. Zuvor hatte er Lehrstühle an der EBS, der Johann Wolfgang Goethe Universität Frankfurt und der RWTH Aachen. Prof. Dr. Andreas Seeliger lehrt seit 2011 Volks- und Energiewirtschaftslehre an der Dualen Hochschule Baden-Württemberg Mosbach. Zuvor war er bei Frontier Economics, der Trianel European Energy Trading sowie dem Energiewirtschaftlichen Institut an der Universität zu Köln beschäftigt.

Economics and Ageing Sep 30 2022 This upper level textbook provides a coherent introduction to the economic implications of individual and

population ageing. Placing economic considerations into a wider social sciences context, this is ideal reading not only for advanced undergraduate and masters students in economics, health economics and the economics of ageing, but also policy makers, students, professionals and practitioners in gerontology, sociology, health-related sciences and social care. This volume introduces the different conceptualisations of age and definitions of 'old age', as well as the main theories of individual ageing as developed in the disciplines of biology, psychology and sociology. It covers the economic theories of fertility, mortality and migration and describes the four main frameworks that can be used to study economics and ageing, namely the life cycle, the overlapping generations, the perpetual youth and the dynastic models.

Green Food Jun 15 2021 Colorful bracelets, funky brooches, and beautiful handmade beads: young crafters learn to make all these and much more with this fantastic step-by-step guide. In 12 exciting projects with simple steps and detailed instructions, budding fashionistas create their own stylish accessories to give as gifts or add a touch of personal flair to any ensemble. Following the successful "Art Smart" series, "Craft Smart" presents a fresh, fun approach to four creative skills: knitting, jewelry-making, papercrafting, and crafting with recycled objects. Each book contains 12 original projects to make, using a range of readily available materials. There are projects for boys and girls, carefully chosen to appeal to readers of all abilities. A special "techniques and materials" section encourages young crafters to try out their own ideas while learning valuable practical skills.

Foundations I develops the choice, price, and general equilibrium theory topics typically found in first-year theory sequences, but in deeper and more complete mathematical form than most standard texts provide. The objective is to take the reader from acquaintance with these foundational topics to something closer to mastery of the models and results connected to them. Provides a rigorous treatment of some of the basic tools of economic modeling and reasoning, along with an assessment of the strengths and weaknesses of these tools Complements standard texts Covers choice, preference, and utility; structural properties of preferences and utility functions; basics of consumer demand; revealed preference and Afriat's Theorem; choice under uncertainty; dynamic choice; social choice and efficiency; competitive and profit-maximizing firms; expenditure minimization; demand theory (duality methods); producer and consumer surplus; aggregation; general equilibrium; efficiency and the core; GET, time, and uncertainty; and other topics Features a free web-based student's guide, which gives solutions to approximately half the problems, and a limited-access instructor's manual, which provides solutions to the rest of the problems Contains appendixes that review most of the specific mathematics employed in the book, including a from-first-principles treatment of dynamic programming

Earth Care Manual May 27 2022 The long-awaited exploration of permaculture specifically for cooler Northern Hemisphere climates is finally here! Already regarded as the definitive book on the subject, The Earth Care Manual is accessible to the curious novice as much as it is essential for the knowledgeable practitioner. Permaculture started out in the 1970s as a sustainable alternative to modern agriculture, taking its inspiration from natural ecosystems. It has always placed an emphasis on gardening, but since then it has expanded to include many other aspects, from community design to energy use. It can be seen as an overall framework that puts a diversity of green ideas into perspective. Its aims are low work, high output, and genuine sustainability.

Urban Services to Ecosystems May 03 2020 The aim of this book is to bring together multidisciplinary research in the field of green infrastructure design, construction and ecology. The main core of the volume is constituted by contributions dealing with green infrastructure, vegetation science, nature-based solutions and sustainable urban development. The green infrastructure and its ecosystem services, indeed, are gaining space in both political agendas and academic research. However, the attention is focused on the services that nature is giving for free to and for human health and survival. What if we start to see things from another perspective? Our actions shall converge for instance to turn man-made environment like cities from heterotrophic to autotrophic ecosystems. From landscape ecology to urban and building design, like bricks of a wall, from the small scale to the bigger landscape scale via ecological networks and corridors, we should start answering these questions: what are the services that are we offering to Nature? What are we improving? How to implement our actions? This book contains three Open Access chapters, which are licensed under the terms of the Creative Commons Attribution 4.0 International License (CC BY 4.0).

urban areas, as well as providing flooding control in monsoonal climates such as Korea, or combined sewer systems such as Germany. The importance of these systems in cities has grown, as water managers seek to provide a range of decentralised solutions to supply constraints of current water supply systems, whilst reducing the impact of urban development on the natural environment, and increasing resilience to the impacts of climate change. Rainwater tank systems are now often implemented under integrated urban water management (IUWM) and water sensitive urban design (WSUD) philosophies, which take a holistic view of the urban water cycle. Rainwater Tank Systems for Urban Water Supply is based on a comprehensive, multi-million dollar research program that was undertaken in South East Queensland (SEQ) Australia in response to the Millennium drought when the water supply level in the regions drinking water dams dropped to 17% in July 2007 and the area came close to running out of water. In particular, the book provides insights and detailed analysis of design, modelling, implementation, operation, energy usage, economics, management, health risk, social perceptions and implications for water quality/quantity of roof water runoff. The approaches and methodologies included in Rainwater Tank Systems for Urban Water Supply inform and validate research programs, and provide insights on the expected performance and potential pitfalls of the adoption of rainwater tanks systems including: actual harvested yield and resulting mains water savings, optimal sizing for rainwater storages and roof collection systems, expected water quality and implications for managing public health risks, modelling tools available for decision support, operation and management approaches of a decentralised asset at the household scale and community acceptance. The book is suitable for use at undergraduate and post graduate levels and is of particular interest to water professionals across the globe, who are involved in the strategic water planning for a town, city or a region. It is a valuable resource for developers, civil designers, water planners, architects and plumbers seeking to implement sustainable water servicing approaches for residential, industrial and commercial developments.

Edible Forest Gardens, Volume II Apr 13 2021 Edible Forest Gardens is a groundbreaking two-volume work that spells out and explores the key concepts of forest ecology and applies them to the needs of natural gardeners in temperate climates. Volume II, Dave Jacke and Eric Toensmeier move on to practical considerations: concrete ways to design, establish, and maintain your own forest garden. Along the way they present case studies and examples, as well as tables, illustrations, and a uniquely valuable "plant matrix" that lists hundreds of the best edible and useful species.

Optimization of Stochastic Discrete Systems and Control on Complex Networks May 15 2021 This book presents the latest findings on stochastic dynamic programming models and on solving optimal control problems in networks. It includes the authors' new findings on determining the optimal solution of discrete optimal control problems in networks and on solving game variants of Markov decision problems in the context of computational networks. First, the book studies the finite state space of Markov processes and reviews the existing methods and algorithms for determining the main characteristics in Markov chains, before proposing new approaches based on dynamic programming and combinatorial methods. Chapter two is dedicated to infinite horizon stochastic discrete optimal control models and Markov decision problems with average and expected total discounted optimization criteria, while Chapter three develops a special game-theoretical approach to Markov decision processes and stochastic discrete optimal control problems. In closing, the book's final chapter is devoted to finite horizon stochastic control problems and Markov decision processes. The algorithms developed represent a valuable contribution to the important field of computational network theory.

A Systems Approach for River and River Basin Restoration Jun 03 2020 Communities increasingly find that the water quality, water levels, or some other resource indicator in their river basins do not meet their expectations. This discrepancy between the desired and actual state of

the resource leads to efforts in river basin restoration. River basins are complex systems, and too often, restoration efforts are ineffective due to a lack of understanding of the purpose of the system, defined by the system structure and function. The river basin structure includes stocks (e.g., water level or quality), inflows (e.g., precipitation or fertilization), outflows (e.g., evaporation or runoff), and positive and negative feedback loops with delays in responsiveness, all of which function to change or stabilize the state of the system (e.g., the stock of interest, such as water level or quality). External drivers on this structure, together with goals and rules, contribute to how a river basin functions. This book reviews several new research projects to identify and rank the twelve most effective leverage points to address discrepancies between the desired and actual state of the river basin system. This book demonstrates that river basin restoration is most likely to succeed when we change paradigms rather than try to change the system elements, as the paradigm will establish the system goals, structure, rules, delays, and parameters.
