The Cursing Mommy's Book of Days Dec 04 2020 Based on his widely read columns for The New Yorker, Ian Frazier's uproarious first novel, *The Cursing Mommy's Book of Days*, centers on a profoundly memorable character, sprung from an impressively fertile imagination. Structured as a daybook of sorts, the book follows the Cursing Mommy—beleaguered wife of Larry and mother of two boys, twelve and eight—as she tries (more or less) valiantly to offer tips on how to do various tasks around the home, only to end up on the ground, cursing, surrounded by broken glass. Her voice is somewhere between Phyllis Diller's and Sylvia Plath's: a hilariously desperate housewife with a taste for swearing and large glasses of red wine, who speaks to the frustrations of everyday life. Frazier has demonstrated an astonishing ability to operate with ease in a variety of registers: from *On the Rez*, an investigation into the lives of modern day Oglala Sioux written with a mix of humor, compassion, and imagination, to *Dating Your Mom*, a sidesplitting collection of humorous essays that imagines, among other things, how and why you might begin a romance with your mother. Here, Frazier tackles another genre with his usual grace and aplomb, as well as an extra helping of his trademark wicked wit. *The Cursing Mommy's* failures and weaknesses are our own—and Frazier gives them a loving, satirical spin that is uniquely his own.

**Ad Hoc Networks** Apr 20 2022 This book constitutes the thoroughly refereed proceedings of the fourth International Conference on Ad Hoc Networks, ADHOCNETS 2012, held in Paris, France, in October 2012. The 18 revised full papers presented were carefully selected and reviewed from 43 submissions. These – and 6 invited papers now cover and even broader scope, referring to many types of autonomous wireless networks designed and deployed for a specific task or function, such as wireless sensor networks, vehicular networks, and home networks. They are organized in topical sections on MAC and PHY layers, localization and position-based protocols in WSNs, resource allocations and cognitive radio, key, service and caching management, network architectures and frameworks, and mobility and disconnection management.

**Environmental Information in Instructions for Use of Consumer Products** Nov 03 2020 The European Union has highlighted the issue of environmentally sound use of products in the context of Integrated Product Policy, IPP. Accordingly, consumers should have easy access to understandable, relevant and credible environmental information. Information about product characteristics is available in different forms and sources, but in many cases, relevant environmental information is not available on the product itself. The study described in this report was initiated in order to produce information on the state of user instructions regarding environmental information. User manuals of passenger cars and refrigerators were focused on, examining the advice which could diminish the harmful environmental effects of the use of these products. Other studied products included such durable products as textiles and furniture as well as such consumables as cleaning chemicals and recyclable paper products. The study raised many ideas about actions that could promote the status and 'eco-development' of instructions for use.

*Emergency Hospitals For Covid-19: Construction And Operation Manual* Jan 17 2022 The COVID-19 outbreak in Wuhan, Hubei, saw great numbers of patients overwhelming the admission capacity of designated infectious diseases hospitals, which in turn led to insufficient medical supplies fulfilling treatment needs. Hence, Zall Foundation proposed the construction of COVID-19 Emergency Hospitals to effectively respond to the surging number of COVID-19 cases. This involved the conversion of existing hospitals that have insufficient, or do not have admission capacities for infectious diseases patients, into emergency hospitals that solely focus on receiving suspected and confirmed COVID-19 cases. From January 30, 2020, Zall Foundation, along with professional medical institutions, reconstructed seven existing professional medical institutions into COVID-19 Emergency Hospitals in less than 10 days. In total, 4,583 wards were provided after renovation, where 2,833 confirmed and suspected COVID-19 patients were cured. The COVID-19 Emergency Hospitals have played an important role in China's epidemic prevention and control by efficiently easing the problems of insufficient ward beds and inadequate admission capacities of infectious diseases hospitals. Based on the experience of construction and operation of the emergency hospitals which are designed in strict adherence to relevant medical standards and regulations, this manual has been compiled by the Zall Foundation. It aims to provide useful reference to the reconstruction of existing hospitals and practice of expanding medical

resources for all other regions around the world, to effectively contribute to pandemic control. The manual has been translated into more than 20 languages.
