[Comparing the development of two communication technology companies using financial statement analysis](#) Sep 14 2021 Bachelor Thesis from the year 2017 in the subject Business economics - General, grade: 1.7, Fachhochschule Bonn-Rhein-Sieg, language: English, abstract: The general aim of this present thesis is to gain insight into the economic situation of both companies from published annual reports and then into the development of Huawei and Ericsson within six years, since other sources of financial data are not available to outsiders, and the analysis of the consolidated financial statements of Huawei and Ericsson, which was prepared in accordance with IFRS, within the six year period, gives insights into the economic situation of the two companies. To be more precise, the objectives of this essay are to analyze the financial statements of those two communication technology companies using various financial indicators in order to evaluate both balance sheets' structures, liquidity situations and performances, then to perform a comparison between those two companies in order to study the development of both companies during the last six years and to find out how Huawei overtook its rival Ericsson and whether this success and continuous growth is still sustainable in the current global economic recession and financial crisis as well as in the future. This thesis's main task is to compare the analytic results of the two firms from 2011 to 2016 in order to find out to what extent Huawei has surpassed Ericsson, using the instruments of financial statement analysis. First, using the principle of Küting and Weber, we reformulated the financial statements of the two companies to make them more comparable, and then we calculated the necessary key ratios extracted from annual financial reporting so that we can make comparison and outline the company's status in three aspects, i.e. structure, liquidity, and performance. At last, after comparison of ratios of the two companies conclusions were drawn.

The Story Underlying the Numbers Oct 03 2020 Very often it is observed that when faced with financial statements of a firm, students and even practitioners are at a loss as to where to begin with analysis. They simply compute every ratio they have studied and interpret them in a standalone manner. They are unable to thread them together to spin a meaningful story that can completely or at least substantially explain what might be probably happening at the firm. Unless the individual studying the financial statements - whether an investor, management personnel, third party analyst, or any other party of interest - is able to identify underlying issues and come up with probable causes, decision making with regard to investment or pulling out or with regard to resolving the problem, will remain flawed. This book is aimed at students and working executives who have a basic prior understanding of the three primary financial statements - the balance sheet, the income statement and the cash flow statement - as well as familiarity with basic financial ratios. The book uses a logical, top-down approach to unravel the underlying story of the firm. Once the first-level is unravelled, the second layer to be peeled will be determined by the user given her perspective and objective.
