Directed Energy Weapons Dec 29 2019 This book delves deeply into the real-world technologies behind the 'directed energy weapons' that many believe exist only within the confines of science fiction. On the contrary, directed energy weapons such as high energy lasers are very real, and this book provides a crash course in all the physical and mathematical concepts that make these weapons a reality. Written to serve both scientists researching the physical phenomena of laser effects, as well as engineers focusing on practical applications, the author provides worked examples demonstrating issues such as how to solve for heat diffusion equation for different boundary and initial conditions. Several sections are devoted to reviewing and dealing with solutions of diffusion equations utilizing the aid of the integral transform techniques. Ultimately this book examines the state-of-the-art in currently available high energy laser technologies, and suggests future directions for accelerating practical applications in the field."br>/div

Epic Win for Anonymous Jun 22 2019 Created by a 15-year-old wunderkind in 2003, it is the creative force behind "the Web's most infectious memes and catchphrases" (Wired). Today it has over 12 million monthly users, with enormous social influence to match. Epic Win is the first book to tell 4chan's story. Longtime blogger and 4chan expert Cole Stryker writes with a voice that is engrossingly informative and approachable. Whether examining the 4chan-provoked Jessi Slaughter saga and how cyber-bullying is part of our new reality, or explaining how Sarah Palin's email account was leaked, Epic Win for Anonymous proves 4chan's transformative cultural impact, and how it has influenced--and will continue to influence--society at large.

Consciousness Explained Feb 29 2020 "Brilliant...as audacious as its title....Mr. Dennett's exposition is nothing short of brilliant." --George Johnson, New York Times Book Review Consciousness Explained is a a full-scale exploration of human consciousness. In this landmark book, Daniel Dennett refutes the traditional, commonsense theory of

consciousness and presents a new model, based on a wealth of information from the fields of neuroscience, psychology, and artificial intelligence. Our current theories about conscious life-of people, animal, even robots--are transformed by the new perspectives found in this book.

Health Care Computing Oct 07 2020 Most health professionals have to use computers - at least some of the time. Frequently, those computers are personal computers -the generic name for the ones that are variously known as 'IBM compatible' or 'IBM clones' or just PCs. This separates them out from certain other makes such as the Apple Macintosh, the Amstrad dedicated word processor, the Atari, Amiga and a number of others. This book is about PCs. When you need information about your computer when you are busy, you don't want to have to wade through piles of manuals to find what you need. You often need a fairly straightforward piece of information - now. Computers can be infuriating. When they are up and running properly, they can save time and help you to be more productive. When something goes wrong, they can be extremely frustrating. Once you have called in someone else to fix your problem, it is often apparent that the answer to your problem was only a few keystrokes away. This book aims at supplying you with small chunks of information that can aid your productivity, get you out of awkward corners and help you to become more at home with your Pc. It has been my experience - as a health care lecturer and as a regular com puter user - that you need to develop a certain baseline of confidence in working with them.

Processing for Android Mar 31 2020 Learn how to use the Processing programming language and environment to create Android applications with ease. This book covers the basics of the Processing language, allowing users to effectively program interactive graphics in 2D and 3D. It also details the application of these techniques to different types of Android devices (smartphones, tablets, wearables and smartwatches). Processing for Android walks you through the steps of taking an initial idea to a final app. With this book, you will be able to write engaging apps with interactive visuals driven by motion and location information obtained from the device's sensors; including health data from the wearer, like step count and heart rate. An advantage of Processing for Android over more complex programming environments is the ability for users to focus on the interactions and visual output of their code rather than in the implementation details of the Android platform. This book goes through a comprehensive series of hand-on projects, ranging from simple sketches to more complex projects involving sensors and integration with larger apps. It also covers important aspects such as exporting your Processing projects as signed apps are ready to upload to the Google Play store and be share with the world! What You'll Learn Write apps and live

wallpapers for smartphones and tablets Design and implement interactive watch faces Create Virtual Reality experiences for Cardboard devices Integrate Processing sketches into larger apps and Android Studio Export projects as completed apps ready to distribute through Google Play Store Who This Book Is For Artists, designers, students, researchers, and hobbyists who are not necessarily Android experts, but are looking to write mobile apps that make creative use of interactive graphics, sensor data, and virtual reality.

Inclusive Learning 365 Jan 22 2022 Designed to be read one day – and page – at a time, this book from four inclusive learning experts offers 365 strategies for implementing technology to design inclusive experiences. Educators across the world are working to design individualized instruction that empowers every student to become experts at learning. Technology and instructional interventions designed to support students with disabilities often eventually become mainstream and used by the masses. These practices provide a pathway for designing inclusive, equitable and accessible educational experiences that meet the needs of every individual learner. This engaging book includes daily strategies accompanied by examples of tools that can be implemented immediately to design meaningful instruction. Topics covered include role-playing games for social-emotional learning, building literacy through captioned video, coding to teach early literacy, text-to-speech for math and reading, and much more! Each daily strategy includes: • Explanation of how to use the strategy to design inclusive educational experiences. • Examples of tools that can be used to implement the strategy. • Alternative ways to use the strategy to extend student learning. • Images illustrating the strategy or tool. • Identification of relevant ISTE Standards for

Educators and ISTE Standards for Students. Related resources. The heart of the book is the shift in mindset that occurs by exploring a different practical, inclusive strategy each day and infusing these strategies into everyday practice.

Human-Computer Systems Interaction: Backgrounds and Applications 3 Apr 12 2021 This book contains an interesting and state-of the art collection of papers on the recent progress in Human-Computer System Interaction (H-CSI). It contributes the profound description of the actual status of the H-CSI field and also provides a solid base for further development and research in the discussed area. The contents of the book are divided into the following parts: I. General human-system interaction problems; II. Health monitoring and disabled people helping systems and III. Various information processing systems. This book is intended for a wide audience of readers who are not necessarily experts in computer science, machine learning or knowledge engineering, but are interested in Human-Computer Systems Interaction. The level of particular papers and specific spreading-out into particular parts is a reason why this volume makes fascinating reading. This gives the reader a much deeper insight than he/she might glean from research papers or talks at conferences. It touches on all deep issues that currently preoccupy the entire field of H-CSI.

Culture, Aesthetics and Affect in Ubiquitous Media Sep 29 2022 This book argues that ubiquitous media and user-created content establish a new perception of the world that can be called 'particulate vision', involving a different relation to reality that better represents the atomization of contemporary experience especially apparent in social media. Drawing on extensive original research including detailed ethnographic investigation of camera phone practices in Hong Kong, as well as visual analysis identifying the patterns, regularities and genres of such work, it shows how new distributed forms of creativity and subjectivity now work to shift our perceptions of the everyday. The book analyses the specific features of these new developments – the components of what can be called a 'general aesthesia' – and it focuses on the originality and innovation of amateur practices, developing a model for making sense of the huge proliferation of images in contemporary culture, discovering rhythms and tempo in this work and showing why it matters.

Thermal Infrared Characterization of Ground Targets and Backgrounds Mar 12 2021 This new edition updates the technologies that deal with the characterization of the thermal infrared radiation contrast between ground targets and backgrounds. Samples have been updated to comply with the current status of technology in sensor systems and countermeasures. New topics on mine detection and polarization have been included, and the section covering multispectral camouflage of personnel has been extended. The basic principles and meteorological parameters are presented, followed by calibration procedures, signature measurements, and data analyses.

Human – Computer Systems Interaction: Backgrounds and Applications 2 Aug 17 2021 This volume of the book contains a collection of chapters selected from the papers which originally (in shortened form) have been presented at the 3rd International Conference on Human-Systems Interaction held in Rzeszow, Poland, in 2010. The chapters are divided into five sections concerning: IV. Environment monitoring and robotic systems, V. Diagnostic systems, VI. Educational Systems, and VII. General Problems. The novel concepts and realizations of humanoid robots, talking robots and orthopedic surgical robots, as well as those of direct brain-computer interface are examples of particularly interesting topics presented in Sec. VI. In Sec. V the problems of skin cancer recognition, colonoscopy diagnosis, and brain strokes diagnosis as well as more general problems of ontology design for medical diagnostic knowledge are presented. Example of an industrial diagnostic system and a concept of new algorithm for edges detection in computer-analyzed images are also presented in this Section. Among the educational systems, in Sec. VII the remote teaching and testing methods in higher education, a neurophysiological approach to aiding the learning process, an entrepreneurship education system and a magnetic levitation laboratory systems are presented. Sec. VII contains papers devoted to selected general human-computer systems interaction problems. Among them the problems of rules formulation for automatic reasoning, creation of ontologies, Boolean recommenders in decision systems and languages for proteins structural similarity description can be mentioned. The chapters included into both, I and II volumes of the book illustrate a large variety of problems arising and methods used in the rapidly developing Human-System Interaction research domain.
