The book is different from other Baby Care books as it explains in a unique and stepwise manner the various phases of a mother's life with the newborn, i.e., the first few weeks when a baby routine has to be planned, then the first three to six months, the food habits and ways of feeding, the sleeping patterns and duration, baby diapers, types of baby diapers and their correct usage, bathing the baby, keeping him/her in a clean and hygienic surrounding, etc. It also deals elaborately how to clean the baby's hair, skin, nose, ears, trim his/her nails, the application of oil or cream on the baby's body by a light massage, etc., in a detailed and systematic manner. Well, that's not all. The book also provides valuable information regarding Premature Baby Care, i.e., care of the child which is born before the due period of nine months, his/her feeding habits, growth chart, health problems and various other needs with special tips from specialists and pediatricians. How to deal with the common health problems, such as flu, teething fever, common cold, nappy rash, loose motions or constipation, vomiting and asthma. Managing Newborn Problems Dec 09 2020 Every year throughout the world, about four million babies die before they reach one month old, most during the critical first week of life. Most of these deaths are a result of the poor health and nutritional status of the mother, combined with problems such as tetanus or asphyxia, trauma, low birth weight, or preterm birth. However, many of the conditions which result in perinatal death are preventable or treatable without the need for expensive technology. Against this background, this publication contains guidance on evidence-based standards for high quality care provision during the newborn period, considering the needs of mother and baby. It has been produced to assist countries with limited resources to reduce neonatal mortality. The information is arranged under four main headings: clinical assessment, findings and management; principles of newborn baby care; procedures; record keeping and essential equipment, supplies and drugs.

Pregnancy, Childbirth, Postpartum, and Newborn Care Sep 29 2022 This guide provides a full range of updated, evidence-based norms and standards that will enable health care providers to give high quality care

during pregnancy, delivery and in the postpartum period, considering the needs of the mother and her newborn baby. All recommendations are for skilled attendants working at the primary level of health care, either at the facility or in the community. They apply to all women attending antenatal care, in delivery, postpartum or post abortion care, or who come for emergency care, and to all newborns at birth and during the first week of life (or later) for routine and emergency care. This guide is a guide for clinical decision-making. It facilitates the collection; analysis, classification and use of relevant information by suggesting key questions, essential observations and/or examinations, and recommending appropriate research-based interventions. It promotes the early detection of complications and the initiation of early and appropriate treatment, including time referral, if necessary. Correct use of this guide should help reduce high maternal and perinatal mortality and morbidity rates prevalent in many parts of the developing world, thereby making pregnancy and childbirth safer.
