## **Evaluating Research Articles from Start to Finish** Jun 18 2019

Describes how to critique various types of study including: case studies, surveys, correlation studies, regression analysis studies, factor-analytic studies, discriminant analysis studies, factorial studies, and quasi-experimental studies.

## Precision Medicine Powered by pHealth and Connected Health Jul 20

2019 This volume presents the proceedings of the 3rd ICBHI which took place in Thessaloniki on 18-21 November, 2017. The area of biomedical and health informatics is exploding at all scales. The developments in the areas of medical devices, eHealth and personalized health as enabling factors for the evolution of precision medicine are quickly developing and demand the development of new scaling tools, integration frameworks and methodologies.

*Fall Prevention and Protection* Nov 16 2021 This book covers a wealth of knowledge from experts and informed stakeholders on the best ways to understand, prevent, and control fall-related risk exposures. Featured are subjects on: (1) a public health view of fall problems and strategic goals; (2) the sciences behind human falls and injury risk; (3) research on slips, trips and falls; (4) practical applications of prevention and protection tools and methods in industrial sectors and home/communities; (5) fall incident investigation and reconstruction; and (6) knowledge gaps, emerging issues, and recommendations for fall protection research and fall mitigation.

## **Why the case of Enron falls into the Principal Agent framework**

Oct 03 2020 Seminar paper from the year 2006 in the subject Economics - Job market economics, grade: 2,3, University of Kassel, 30 entries in the

bibliography, language: English, abstract: It is claimed that lucrative executive compensation packages have led to irresponsible risk taking and a decline in shareholder value. This research paper is an economic approach to analyse the relationship between principals and agents, whereby the focus lies on executive remuneration incentives. The paper uses the example of Enron's corporate failure to build a case for the principal-agent framework and analyses executive payment schemes. Aspects on the origins and possible solutions for the principal-agent relationship are looked into. The paper concludes that Enron's compensation scheme has led to its failure.

[Stepping On: Building Confidence and Reducing Falls](#) Jul 24 2022 The Stepping On program is a community-based falls-prevention program that shows participants how to reduce falls, increase confidence and maintain personal independence. Originally developed in Australia, based on research and scientifically proven to work, the Stepping On program is now internationally recognised as best practice in falls prevention. The Stepping On manual is aimed at health professionals who work in the area of falls prevention with older people. It offers a step-by-step guide to running the seven-week group program, essential background information and resources, and handouts for group participants. This new edition has been thoroughly revised and redesigned to incorporate the latest research in falls prevention.

*How to Read and Critique Research* Apr 28 2020 Do you find research challenging to read? Do you struggle to get to grips with a research paper? Understanding, critiquing and using research is a key requirement of students studying nursing and healthcare. This book will equip you with the skills you need to understand research and use it in your practice and academic assignments. The approach used in this book is unique: each chapter focuses on a published research paper - one you might be asked to read for a seminar or include in your academic work. In clear, straightforward language, the authors take you through each paper step by step, using it as a basis for exploring the underpinning research method or design, and how it has been reported. Key features: · Each chapter focuses on a different research method by working through a relevant research paper · Identifies the main skills you need for your course: understanding research methods and critiquing articles · Written specifically for nursing and healthcare students by experienced nursing and health care lecturers · Develops your confidence in understanding research by helping you to apply your knowledge to real research papers.

WHO Falls Prevention for Active Ageing model provides an action plan for making progress in reducing the prevalence of falls in the older adult population. By building on the three pillars of falls prevention, the model proposes specific strategies for: 1. Building awareness of the importance of falls prevention and treatment; 2. Improving the assessment of individual, environmental, and societal factors that increase the likelihood of falls; and 3. For facilitating the design and implementation of culturally appropriate, evidence-based interventions that will significantly reduce the number of falls among older persons. The model provides strategies and solutions that will require the engagement of multiple sectors of society. It is dependent on and consistent with the vision articulated in the WHO Active Ageing Policy Framework. Although not all of the awareness, assessment, and intervention strategies identified in the model apply equally well in all regions of the world, there are significant evidence-based strategies that can be effectively implemented in all regions and cultures. The degree to which progress will be made depends on to the success in integrating falls prevention strategies into the overall health and social care agendas globally. In order to do this effectively, it is necessary to identify and implement culturally appropriate, evidence-based policies and procedures. This requires multi-sectoral, collaborations, strong commitment to public and professional education, interaction based on evidence drawn from a variety of traditional, complementary, and alternative sources. Although the understanding of the evidence-base is growing, there is much that is not yet understood. Thus, there is an urgent need for continued research in all areas of falls prevention and treatment in order to better understand the scope of the problem worldwide. In particular, more evidence of the cost-effectiveness of interconnections is needed to develop strategies that are most likely to be effective in specific setting and population sub-groups.

Slip & Fall Practice Mar 08 2021 Receive expert guidance from the leading authority on proving notice and breach, investigating the accident scene, determining the coefficient of friction, dealing with experts, preparing for trial and more.

Research and Practice for Fall Injury Control in the Workplace: Proceedings of International Conference on Fall Prevention and Protection Jun 23 2022

Falls represent a serious hazard to workers in many industries. Workers who perform tasks at elevation—workers in the construction, structural metal working, and tree trimming industries, for example—are at risk of falls from heights, with frequently grave or even fatal consequences. Many more workers, in nearly every industry, are subject to falls to floors, walkways or ground surfaces. These falls, characterized as fall on the same level, are responsible for well over half of nonfatal injuries that result in days away from work. The etiology of falls as injury-producing events is multi-factorial, and encompasses multiple mechanisms of exposure. Working at heights involves completely different fall risks than those found on workplace surfaces and floors. The different exposures represent serious safety risks in both cases, resulting in fatal and serious nonfatal injury. To address the various causes of multi-factorial events such as these, there needs to be wide-ranging and multidisciplinary injury-mitigation approaches provided to practitioners based on a wide variety of research methods. To advance our knowledge of occupational fall injuries, the International Conference on Fall Prevention and Protection (ICFPP), held in May of 2010, was convened to provide a forum for researchers from NIOSH, its stakeholders, and the community of fall-prevention specialists and experts to present research findings, recommendations and expert advice on the latest tools and methods to reduce the incidence of injury from falls. At the conference, a wide variety of research approaches and methods were presented, and these approaches reflected the multidisciplinary orientation of the different stakeholders in attendance, as well as the individual interests and expertise of participating researchers. This document represents a wealth of knowledge from experts and informed stakeholders on the best way to understand,

prevent, and control fall-related risk exposures. It is anticipated that these presentations will serve to bring together the communities of interest that attempt to prevent and ameliorate fall-related injuries, and will spur efforts that will continue in the form of joint and supported research investigations, research consortia, and informed dialogue in support of a common goal. NIOSH hopes to continue to sponsor forums for the presentation of methods and findings related to occupational fall injury protection and prevention in the future.

**README FIRST for a User's Guide to Qualitative Methods** Aug 21 2019 The Third Edition of this README FIRST for a User's Guide to Qualitative Methods offers those new to qualitative inquiry a clear and practical handbook to doing qualitative research, the fit of questions to methods, and the tasks of getting started. In their direct and friendly style, Lyn Richards and Janice Morse help researchers reflect on why they are working qualitatively, choose an appropriate method, and confidently approach research design, data making, coding, analyzing and finally writing up their results.

**Fall Prevention Programming** Mar 20 2022 Fall Prevention

Programming 2nd edition presents a unique approach to fall prevention for health care professionals and community support providers who work

with older persons in community, residential and acute care settings. The content focuses on the practical application of current research on fall and fall-related injury prevention. This book a valuable resource for all who work with older adults and is the required text for the Canadian Fall Prevention Curriculum course on how to design, implement and evaluate a fall prevention program - available at: [continuingstudies.uvic.ca/CFPC](http://continuingstudies.uvic.ca/CFPC)  
The learning objectives for this book are: - To increase your understanding of the scope and nature of the problem of falls among older persons in your region and work setting - To build on your knowledge of fall risk identification and assessment and the application of this knowledge to select appropriate interventions - To build on your knowledge of fall prevention interventions to reflect the practical application of evidence-based strategies - To increase your understanding of how to implement a successful and sustainable program and how to apply a program planning model for the design and implementation of a fall prevention program - To increase your ability to evaluate the effectiveness of a fall prevention program
