Intro to Meteorology & Astronomy Parent Lesson Plan Aug 24 2019 Introduction to Meteorology and Astronomy Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Semester 1: Meteorology The Earth was created to be the dwelling place of man. It is a complex world and its weather patterns affect our lives every day. Whether you live near the equator, a polar region, or somewhere in between, knowledge of the weather is important. The Weather Book will teach you: why our exact distance from the sun allows life on earth, how the weather on the other side of the earth affects you, how clouds form and how to identify the different types, what the difference is between a cold and warm front, why you can often see lightning long before you can hear thunder, how to build your own weather station, how to survive in dangerous weather, what the greenhouse effect and the ozone hole are, what Noah's flood and the Ice Age have in common, how weatherpersons forecast hurricanes and tornadoes, how to read a weather map, and what our responsibility is to the environment. Learning about the weather is fun! It will change the way you look at the clouds in the sky. Now you'll have more of an understanding about what is going on miles above your head. And when you hear a weather report on television, you will understand so much more about the world around you!. Semester 2: Astronomy One

thing we have in common with the ancients is that all of the human race has gazed at the night sky, and the bright morning, and wondered, "What's out there?" Our universe is so vast and awe-inspiring that to learn about it is to learn about ourselves. The Astronomy Book will teach you: what long-ago astronomers thought about other worlds, solar system facts, how constellations relate to astrology, the history of space exploration, black holes-do they exist?, the origin and age of the moon, why Mars doesn't support life, the composition of stars, supernova remnants, and the myth of star birth, asteroid legends and the extinction of the dinosaurs, are there planets outside our solar system, and could they be home to intelligent life?, what are UFOs?, and the age of comets and meteor showers. Learning about the universe is huge fun! In the almost infinite expanse above us, we can examine planets, galaxies, and phenomena so beautiful and complex that we never outgrow a childlike wonder. We see our own reflection in the moon, the stars, and in comet trails. The more we learn, the less we fear!

Concepts of Mathematics & Physics Parent Lesson Plan Apr 12 2021 Concepts of Mathematics and Physics Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Semester 1: Mathematics Numbers surround us. Just try to make it through a day without using any. It's impossible: telephone numbers, calendars, volume settings, shoe sizes, speed limits, weights, street numbers, microwave timers, TV channels, and the list goes on and on. The many advancements and branches of mathematics were developed through the centuries as people encountered problems and relied upon math to solve them. It's amazing how ten simple digits can be used in an endless number of ways to benefit man. The development of these ten digits and their many uses is the fascinating story in Exploring the World of Mathematics. Semester 2: Physics Physics is a branch of science that many people consider to be too complicated to understand. John Hudson Tiner puts this myth to rest as he explains the fascinating world of physics in a way that students can comprehend. Did you know that a feather and

a lump of lead will fall at the same rate in a vacuum? Learn about the history of physics from Aristotle to Galileo to Isaac Newton to the latest advances. Discover how the laws of motion and gravity affect everything from the normal activities of everyday life to launching rockets into space. Learn about the effects of inertia firsthand during fun and informative experiments. Exploring the World of Physics is a great tool for students who want to have a deeper understanding of the important and interesting ways that physics affects our lives.

Survey of Science History & Concepts Parent Lesson Plan Nov 27 2019 Survey of Science History & Concepts Course Description Students will study four areas of science: Scientific Mathematics, Physics, Biology, and Chemistry. Students will gain an appreciation for how each subject has affected our lives, and for the people God revealed wisdom to as they sought to understand Creation. Each content area is thoroughly explored, giving students a good foundation in each discipline. Semester 1: Math and Physics Numbers surround us. Just try to make it through a day without using any. Learn about the effects of inertia first hand during fun and informative experiments. Exploring the World of Physics is a great tool for student who want to have a deeper understanding of the important and interesting ways that physics affects our lives. Semester 2: Biology and Chemistry The field of biology focuses on living things, from the smallest microscopic protozoa to the largest mammal. In this book you will read and explore the life of plants, insects, spiders and other arachnids, life in water, reptiles, birds, and mammals, highlighting God's amazing creation. You will learn about biological classification, how seeds spread around the world, long-term storage of energy, how biologists learned how the stomach digested food, the plant that gave George de Mestral the idea of Velcro, and so much more. For most of history, biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar-looking features into families. Starting in the 1990's, biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like visual structures, these reveal the underlying design of creation. Exploring the World of Biology is a fascinating look at life-from the smallest proteins and spores, to the complex life systems of humans and animals. Chemistry is an amazing branch of science that affects us every day, yet few people realize it, or even give it much thought. Without chemistry, there would be nothing made of plastic, there would be no rubber tires, no tin cans, no televisions, no microwave ovens, or something as simple as wax paper. This book presents an exciting and intriguing tour through the realm of chemistry as each chapter unfolds with facts and stories about the discoveries of discoverers. Find out why pure gold is not used for jewelry or coins. Join Humphry Davy as he made many chemical discoveries, and learn how they shortened his life. See how people in the 1870s could jump over the top of the Washington Monument. Exploring the World of Chemistry brings science to life and is a wonderful learning tool with many illustrations and biographical information.

Communications Standard Dictionary Mar 31 2020 Communications * Standard Dictionary is a comprehensive compilation of terms and definitions used in communications and related fields. Communications is defined as the branch of science and technology concerned with the process of representing, transferring, and interpreting the meaning as signed to data by and among persons, places, or machines. Communication is defined as the transfer of information between a source (transmitter, light source) and a sink (receiver, photodetector) over one or more channels in accordance with a protocol, and in a manner suitable for interpretation or comprehension by the receiver; or as a method or means of conveying information of any kind from one person or place to another. In short, communications is a branch of science and technology, whereas communication pertains to the actual transfer of information. Thus, the word communication should be used as a modifier, as in communication center, communication deception, and communication line, just as in the field of electronics one speaks of electronic devices and electronic circuits.

The Stargazer's Guide to the Night Sky: Explore the night sky, identify stars, constellations, and even planets. Stargaze

with a telescope, binoculars, or even your naked eye. Allow Dr. Jason Lisle, a research scientist with a masters and PhD in astrophysics, to guide you in examining the beauty of God's Creation with 150 full color star-charts. Learn the best ways and optimal times to observe planets and stars with easy to use illustrations. Create or expand the hobby of stargazing; an outdoor, educational hobby to enjoy with friends or family. Our Created Moon DVD: In this illustrated presentation, Dr. Don DeYoung looks at four of the most popular ideas evolutionists have to offer regarding the moon's origin, and logically concludes that this "lesser light" could only have been placed in its orbit by an all-knowing, all-powerful Creator. Created Cosmos DVD: Our universe is truly an amazing thing. The vastness of space boggles the mind, and the beauty of diversity we find there points to a Creator. The Psalmist wrote, "When I consider Your heavens, the work of Your fingers, the moon and the stars, which You have ordained, what is man that You are mindful of him, and the Son of man that You visit him?" Take a tour through the universe during this awe-inspiring presentation.

Science Spectrum Sep 05 2020

Invisible Universe Jun 26 2022 The 5 class sessions, of 45-60 minutes each, deepen student understanding of the electromagnetic spectrum, enabling students to detect and consider wavelengths other than visible light. Activities feature energy stations, including infrared (TV remote); microwave (pager); ultraviolet (black light) and other devices. Students come up with their own tests to see what blocks each wavelength, and what does not. They learn how these other wavelengths can be used to "see" things we cannot see with our eyes.

Applied Science: Studies of God's Design in Nature Parent Lesson Planner Jan 10 2021 Applied Science: Studies of God's Design in Nature Course Description This is the suggested course sequence that allows one core area of science to be studied per semester. You can change the sequence of the semesters per the needs or interests of your student; materials for each semester are independent of one another to allow flexibility. Made in Heaven Science shamelessly steals from God's creation, yet refuses to give God the glory! Discover how the glow of a cat's eyes innovates road reflectors, the naturally sticky inspirations for Velcro and barbed wire, as well as a fly's ear, the lizard's foot, the moth's eye, and other natural examples are inspiring improvements and new technologies in our lives. Engineers and inventors have long examined God's creation to understand and copy complex, proven mechanics of design in the science known as biomimicry. Much of this inspiration is increasingly drawn from amazing aspects of nature, including insects to plants to man, in search of wisdom and insight. We are surrounded daily by scientific advancements that have become everyday items, simply because man is copying from God's incredible creation, without acknowledging the Creator. Champions of Invention The great minds of the past are still with us today, in many ways. Individuals who explored the natural world hundreds and thousands of years ago have given us a treasure of knowledge in all the sciences. In this exciting series from educator/author John Hudson Tiner, short biographies of the world's most gifted thinkers will inspire the leaders of tomorrow. Study the life of the "forgotten" inventor, Joseph Henry, whose exploration of electricity set the standard for later innovators. Find out how a personal tragedy paved the way for Samuel F.B. Morse to put aside his painting and develop the telegraph. These valuable learning guides will give students accurate accounts of lives from the halls of science, and explain what those scientists believed about the world around them. Discovery of Design From the frontiers of scientific discovery, researchers are now taking design elements from the natural world and creating extraordinary breakthroughs that benefit our health, our quality of life, and our ability to communicate, and even help us work more efficiently. An exciting look at cutting-edge scientific advances, Discovery of Design highlights incredible examples that include: How things like batteries, human organ repair, microlenses, automotive engineering, paint, and even credit card security all have links to natural designs Innovations like solar panels in space unfurled using technology gleaned from beech tree leaves, and optic research rooted in the photonic properties of opal gemstones Current and future research from the fields of stealth technology, communications, cosmetics, nanotechnology, surveillance, and more! Take a fantastic journey into the intersection of science and God's blueprints for life — discovering answers to some of the most intricate challenges we face in a multi-purpose educational supplement.
