Early Detection of Prostate Cancer, An Issue of Urologic Clinics.

Jun 22 2019 PSA screening remains highly controversial due to several important disadvantages. More PSA is produced with prostatic enlargement and in other benign conditions such as urinary tract infections. False positive tests can then lead to unnecessary diagnostic workup with invasive prostate biopsy. Another major problem with screening programs in general is overdiagnosis of cancers that would not have caused harm during the patient's lifetime. For example, many prostate cancers have a relatively indolent behavior so may not require diagnosis or treatment in a patient with limited life expectancy. All forms of prostate cancer treatment have potential urinary and sexual side effects, so reducing overdiagnosis and overtreatment are critical public health issues. Because screening has many proven benefits but also significant harms, there are widely disparate guidelines on prostate cancer screening from major organizations worldwide. This issue of the Urologic Clinics will provide insights into the many different prostate cancer guidelines and related policy issues.

manufacturing is a world of its own which bears on almost all other disciplines. This book is not necessarily a “how to” material that teaches one how to manufacture a product, but rather an aid to help learners gain a more complete understanding of “what is in it” and “what happens in the field”. Thus, this book will provide more comprehensive information about manufacturing. It is intended to introduce every interested person to what manufacturing is, its diverse components, and the various activities and tasks that are undertaken in its many and diverse departments. It should serve as an introductory material to beginning college manufacturing and related majors. Over the years, I have learned that most of these beginners are ill equipped with key aspects of manufacturing when they arrive. This group also includes all technical- and business-minded individuals who enroll or train in trade, business, engineering, vocational and technical programs and institutions. This book is divided into 12 very distinctive chapters that are closely arranged to follow manufacturing activities as sequentially as possible, to help readers follow a rather continuous thread of activities generally undertaken in the industry. Its chapters cover various topics including different types, techniques or methods, and philosophies of manufacturing; manufacturing plants and facilities; manufacturing machines; tools and production tooling; manufacturing processes; manufacturing materials and material handling systems; measurement instruments; manufacturing personnel; manufactured products; and planning, implementing, controlling and improving manufacturing systems.
