Learning to Teach English in the Secondary School Sep 05 2020 This best-selling textbook combines theory and practice to present a broad introduction to the opportunities and challenges of teaching English in secondary school classrooms. Each chapter explains the background to current debates about teaching the subject and provides tasks, teaching ideas, and further reading to explore issues and ideas in relation to school experience. Already a major text for many university teaching courses, this new edition has been thoroughly updated in the light of new legislation and includes fresh chapters on the National Literacy Strategy, Media and ICT. Other chapters suggest a broad range of approaches to teaching such crucial areas as: reading and writing, speaking and listening drama, media studies and information technology grammar, poetry and language study Shakespeare post-16 English language and literature Written particularly with the new and student teacher in mind, this book offers principles and practical examples of teaching and learning in a twenty-first century context as new notions of literacy compete with demands of national assessment. It raises issues concerning competence-based courses, working with a mentor in school and monitoring the development of a student teacher.

Using Effectiveness Data for School Improvement Jan 28 2020 Data metrics in schools are becoming increasingly complex, but despite their best efforts, teachers and academics generally find them something of a 'black-box'. This book lifts the lid on that box, exploring the provenance and problematization of existing techniques and developing new algorithms for measuring the more oblique aspects of in-school performance. Using contextual value-added measures in England as a foundation - they have become the template of choice for policy-makers around the world and a basis for some excellent school effectiveness research - the book explores the potential of performance and progress data to guide student and teacher self-evaluation, to set targets and allocate resources, to evaluate initiatives and identify good practice, to assess and reward staff responsibility, and to inform policy in relation to emerging issues like school choice, equality of opportunity and post-compulsory progression. Chapters are sectioned in three parts - 'Past', 'Present' and 'Future' - and cover: the historical journey from raw-threshold to refined-contextual measures of school effectiveness research and policy on pupil attainment and value-added data the leading UK government and Fischer Family Trust models issues relating to differential effectiveness and the interpretation of data how best to blend data from different sources new non-cognitive metrics for assessing social and emotional aspects of learning (SEAL) and staff responsibility managing data for school improvement and understanding professional attitudes to it. Using Effectiveness Data for School Improvement brings together for the first time in one place the various metrics and models, and their basis in research. A full technical specification is included so that both 'data experts' and 'data novices', academics and practitioners, can use the book to understand and maximize what is potentially a hugely transforming, but under-utilized, resource and an increasingly important aspect to school and curriculum management.

Improving Literacy at KS2 and KS3 Sep 25 2019 `Improving Literacy at KS2 and KS3 is all about primary-secondary transfer, seen mostly through the eyes of secondary teachers, but with some interesting contributions from middle-school staff who know the territory well. This book sees the NLS's influence on primary practice as generally benign, but takes a more jaundiced view of the implications for secondary teaching, especially in its central chapter "Evidence from experienced practitioners". There are, however, many useful suggestions for reshaping and adapting parts of the strategy, including chapters on classroom literacy and everyday life and literacy and drama which consider ways of relating learning to the wider culture beyond school, including screen-based literacy. There is also a review of the language-across-the-curriculum movement and a chapter on subject literacies which has left me with an abiding admiration for geography teachers as lone voices of dissent' - Sue Palmer, TES Teacher This book will help students and practising teachers to understand the issues surrounding literacy, the place of transition in pupils' lives, and to feel confident in handling The National Literacy Strategy. The book focuses on the crucial period when children complete primary schooling and begin in secondary schools. It examines the issue of transition from one phase to the other and specifically, the nature of literacy at this period. The authors contrast the `whole school' approach of primaries to the very subject-specific nature of secondary teaching. The authors set the NLS in perspective, reviewing earlier movements such as Language across the Curriculum and the NLS itself. They offer a critique of the strategy and outline its strengths and weaknesses. The book sets out evidence of the way schools are reacting to the NLS, and what classroom teachers and their pupils think. Its coverage is comprehensive and includes focus on primary, secondary and middle schools, the teaching of literacy and English, the role of ICT, as well as important areas such as media education, drama and modern foreign languages. This book will be useful to education students and to practicing teachers in primary and secondary schools.
