Research Priorities for Airborne Particulate Matter Jul 16 2021 In 1997, the U.S. Environmental Protection Agency (EPA) established regulatory standards to address health risks posed by inhaling tiny particles from smoke, vehicle exhaust, and other sources. At the same time, Congress and the EPA began a multimillion dollar research effort to better understand the sources of these airborne particles, the levels of exposure to people, and the ways that these particles cause disease. To provide independent guidance to the EPA, Congress asked the National Research Council to study the relevant issues. The result was a series of four reports on the particulate-matter research program. The first two books offered a conceptual framework for a national research program, identified the 10 most critical research needs, and described the recommended timing and estimated costs of such research. The third volume began the task of assessing initial progress made in implementing the research program. This, the fourth and final volume, gauged research progress made over a 5-year period on each of the 10 research topics. The National Research Council concludes that particulate matter research has led to a better understanding of the health effects caused by tiny airborne particles. However, the EPA, in concert with other agencies, should continue research to reduce further uncertainties and inform long-term decisions.

Business Design Thinking and Doing May 02 2020 This textbook aims to guide, instruct and inspire the next generation of innovation designers, managers and leaders. Building upon an evidence-based innovation development process, it introduces, explains and provides visual models and case examples of what Business Design is, how it is applied across sectors and organizations, and its impact on decision-making and value creation. Students will read and analyze design-led innovation business cases from across the globe, discover multi-disciplinary strategies (from marketing to anthropology) and practice applying a designer's toolkit to find, frame, and solve business problems in contemporary ways. Throughout the book, students will break down the process of innovation and move from initiation to implementation, engage in iterative feedback loops, and develop concrete plans for personal and professional collaboration and workplace application. For MBA and senior undergraduate students, this book offers a step-by-step and comprehensive reference guide to creative problem framing and solving -- inside and beyond the classroom. It integrates marketing principles and management frameworks, with anthropological and design methods reflecting the diverse and in-demand skills vital to tomorrow's workforce. For instructors, this book offers a way to confidently engage learners in the realm of design practices and strategies relevant to business decision-making. The pedagogical framework, along with a comprehensive suite of techniques and templates, offers both novice and experienced teachers a step-by-step reference guide that facilitates skills development in creative problem framing and solving. Angèle Beausoleil is Assistant Professor of Business Design and Innovation in the Rotman School of Management at the University of Toronto, Canada. She is a 'pracademic' who teaches design methodologies for business innovation and leads research on organizational innovation process design, navigation and management. A former communications designer, senior strategist and innovation lab executive, she applies her extensive industry experience to crafting high impact student-centred learning experiences. At Rotman, Beausoleil is the Academic Director of the Business Design Initiative, an emerging education and research centre focused on design-led innovation leadership. She also teaches human-centred design, innovative leadership and creativity to executives, MBA and Commerce students.
