[International Relations from the Global South Jun 02 2020](#) This exciting new textbook challenges the implicit notions inherent in most existing International Relations (IR) scholarship and instead presents the subject as seen from different vantage points in the global South. Divided into four sections, (1) the IR discipline, (2) key concepts and categories, (3) global issues and (4) IR futures, it examines the ways in

which world politics have been addressed by traditional core approaches and explores the limitations of these treatments for understanding both Southern and Northern experiences of the "international." The book encourages readers to consider how key ideas have been developed in the discipline, and through systematic interventions by contributors from around the globe, aims at both transforming and enriching the dominant terms of scholarly debate. This empowering, critical and reflexive tool for thinking about the diversity of experiences of international relations and for placing them front and center in the classroom will help professors and students in both the global North and the global South envision the world differently. In addition to general, introductory IR courses at both the undergraduate and graduate levels it will appeal to courses on sociology and historiography of knowledge, globalization, neoliberalism, security, the state, imperialism and international political economy.

Serious Games Nov 19 2021 This textbook provides an introduction to the fundamentals of serious games, which differ considerably from computer games that are meant for pure entertainment. Undergraduate and graduate students from various disciplines who want to learn about serious games are one target group of this book. Prospective developers of serious games are another, as they can use the book for self-study in order to learn about the distinctive features of serious game design and development. And ultimately, the book also addresses prospective users of serious game technologies by providing them with a solid basis for judging the advantages and limitations of serious games in different application areas such as game-based learning, training and simulation or games for health. To cater to this heterogeneous readership and wide range of interests, every effort was made to make the book flexible to use. All readers are expected to study Chapter 1, as it provides the necessary basics and terminology that will be used in all subsequent chapters. The eleven chapters that follow cover the creation of serious games (design, authoring processes and tools, content production), the runtime context of serious games (game engines, adaptation mechanisms, game balancing, game mastering, multi-player serious games), the effects of serious games and their evaluation (player experience, assessment techniques, performance indicators), and serious games in practice (economic aspects, cost-benefit analysis, serious game distribution). To familiarize the readers with best practice in this field, the final chapter presents more than 30 selected examples of serious games illustrating their characteristics and showcasing their practical use. Lecturers can select chapters in a sequence that is most suitable for their specific course or seminar. The book includes specific suggestions for courses such as "Introduction to Serious Games", "Entertainment Technology", "Serious Game Design", "Game-based Learning", and "Applications of Serious Games".

Teaching Materials and the Roles of EFL/ESL Teachers Feb 29 2020 Teaching Materials and the Roles of EFL/ESL Teachers is published amidst a decade long increase in academic publications and training courses concerned with the evaluation and design of English language teaching materials. It is timely to consider what effect the advice on offer has had on teachers' practice. Are teachers evaluating materials carefully, using textbooks in the ways expected by textbook writers, developing their own materials, and mediating between materials and learners in the ways advised in the professional literature? The book explores these issues from a variety of perspectives. The views of publishers/textbook writers, those contributing to the professional literature, and teacher educators are synthesised to establish a 'theory' of how teachers can best fulfil their roles vis-à-vis materials and learners. This is then compared with 'practice', as represented by published accounts of teachers' actual practices and learners' perspectives. The conclusion reached is that teacher education in materials evaluation and design is essential and suggestions are offered as to the form this might take. The book is intended particularly for MA students and teacher educators concerned with materials evaluation and design, but is of interest to all those concerned with the publication and use of English language teaching materials.
