Resource Planning in Organisational Development Projects Jan 08 2021 Corporate decisions have consequences, especially if they pertain to a company's strategic advancement. These decisions are almost always implemented using an organizational development project. Understandably, members of the senior management and project management prefer to make the process as predictable and tangible as possible. Frequently, they rely on resource planning for (a subjective sense of) certainty. However, it can be generally observed that traditional resource planning is an insufficient solution for organizational development projects. Quotes like the following illustrate how fancifully it is implemented and utilized: "105 percent of the time, my employees are working at 200 percent of their capacity." The present thesis not only provides an overview of existing approaches, their potentials and limitations, but also shows how adequate resource planning can be productively implemented.

Creative Approaches to Planning and Local Development Jun 25 2022 This book project highlights creative approaches to planning and local development. The dynamic complexity, diversity and fluidity which characterize contemporary society represent challenges for planning and development endeavours. While research and policy work has extensively focused on large cities and on metropolitan regions, there has been relatively little work on 'smaller places'. This book shows that if these new challenges affect all places and regions, small and medium-sized towns (SMSTs) are suffering many specific problems that call imperatively for the design and implementation of very imaginative, creative approaches to planning and local development. What could enhance creativity in local development and planning? Is it possible to talk about creative capacity building at the level of a town that might release imaginative and innovative activities? Under what local and non-local conditions is creativity being initiated and flourishing? What are the major obstacles and in what way can these be contained in order to safeguard pockets of creative action? Interdisciplinary and with case studies from France, Norway and other European countries, this volume presents a wide range of approaches and territorial contexts of small cities and towns in which spatial dynamics and the consequences of the city-region for urban planning theory and practice in Europe are highlighted, with a special focus on the challenges for - and understanding of - planning and development of SMSTs. It provides a significant body of critical, comparative and contextual perspectives on the quest for urban sustainability and resilience in SMSTs, therefore emphasizing collaborative and potentially innovative approaches that can be detected, but also the shortcomings, pitfalls and 'traps' that can lie behind the approaches aimed at concerting ecological, economic, and socio-cultural concerns, and the discourses promoting them.

Parks and Recreation System Planning Nov 06 2020 Parks and recreation systems have evolved in remarkable ways over the past two decades. No longer just playgrounds and ballfields, parks and open spaces have become recognized as essential green infrastructure with the potential to contribute to community resiliency and sustainability. To capitalize on this potential, the parks and recreation system planning process must evolve as well. In Parks and Recreation System Planning, David Barth provides a new, step-by-step approach to creating parks systems that generate greater economic, social, and environmental benefits. Barth first advocates that parks and recreation systems should no longer be regarded as isolated facilities, but as elements of an integrated public realm. Each space should be designed to generate multiple community benefits. Next, he presents a new approach for parks and recreation planning that is integrated into community-wide issues. Chapters outline each step—evaluating existing systems, implementing a carefully crafted plan, and more—necessary for creating a successful, adaptable system. Throughout the book, he describes initiatives that are creating more resilient, sustainable, and engaging parks and recreation facilities, drawing from his experience consulting in more than 100 communities across the U.S. Parks and Recreation System Planning meets the critical need to provide an up-to-date, comprehensive approach for planning parks and recreation systems across the country. This is essential reading for every parks and recreation professional, design professional, and public official who wants their community to thrive.

An Integrated Approach in Production Planning and Scheduling Aug 15 2021 Production Management is a large field concerned with all the aspects related to production, from the very bottom decisions at the machine level, to the top-level strategic decisions. In this book, we are concerned with production planning and scheduling aspects. Traditional production planning methodologies are based on a now widely accepted hierarchical decomposition into several planning decision levels. The higher in the hierarchy, the more aggregate are the models and the more important are the decisions. In this book, we only consider the last two decision levels in the hierarchy, namely, the mid-term (or tactical) planning level and the short-term (or operational) scheduling level. In the literature and in practice, the decisions are taken in sequence and in a top-down approach from the highest level in the hierarchy to the bottom level. The decisions taken at some level in the hierarchy are constrained by those already taken at upper levels and in turn, must translate into feasible objectives for the next lower levels in the hierarchy. It is a common sense remark to say that the whole hierarchical decision process is coherent if the interactions between different levels in the hierarchy are taken into account so that a decision taken at some level in the hierarchy translates into a feasible objective for the next decision level in the hierarchy. However, and surprisingly enough, this crucial consistency issue is rarely investigated and few results are available in the literature.

Compromise Planning : A Theoretical Approach from a Distant Corner of Europe Jul 26 2022 The purpose of the book is to elaborate a planning theory which departs from the plethora of theories which reflect the conditions of developed countries of the North-West. The empirical material of this effort is derived from a country, Greece, which sits on the edge between North-West and South-East, at the corner of Europe. No doubt, there is extensive international literature on planning theory in general from a bewildering variety of viewpoints. The interested professional or student of urban and regional planning is certainly aware of the dizzying flood of books, articles and research reports on planning theory and of their never-ending borrowing of obscure concepts from more respectable scientific disciplines, from mathematics to philosophy and from physics to economics, human geography and sociology. He or she probably observed that there is a growing interest in theoretical approaches from the viewpoint of the so-called "Global South". The author of the present book has for many decades faced the impasse of attempting to transplant theories founded on the experience of the North-West to countries with a totally different historical, political, social and geographical background. He learned that the reality that planners face is unpredictable, patchy, and responsive to social processes, frequently of a very pedestrian nature. Planning strives to deal with private interests which planners are keen to envelop in a single "public interest", which is extremely hard to define. The behaviour of the average citizen, far from being that of the neoclassical model of the homo economicus, is that of an individual, a kind of homo individualis, who interacts with the state and the public administration within a complex web of mutual dependence and negotiation. The state and its administrative apparatus, i.e., the key-determinants and fixers of urban and regional planning policy, bargain with this individual, offer inducements, exemptions, derogations and privileges, deviate unhesitatingly from their grand policy pronouncements, but still defend the rationality and comprehensiveness of the planning system they have legislated and operationalized. It is by and large a successful *modus vivendi*, but only thanks to a constant practice of compromise. Hence, the term compromise planning, which the author coined as an alternative to all the existing theoretical forms of planning. This is the sort of planning, and of the accompanying theory, with which he deals in this book. It is the outcome of experience and knowledge accumulated in a long personal journey of academic teaching in England and Greece, research, and professional involvement.

Comparative Approaches to Program Planning Feb 21 2022 "As a practitioner in the field for over thirty years, I have been exposed to endless 'planning' sessions that are prescriptive to the point of being oppressive. Thistext 'gives permission' to the practitioner to allow for emergence, uncertainty, and ambiguity in the planning process. Comparative Approaches to Program Planning provides a guide for the manager, administrator, executive director, strategic planner, and CEO to embrace multiple planning strategies and the understanding of each. This is extremely worthwhile in a dynamic environment and an ever- changing landscape and worldview." —Paul D. McWhinney, ACSW, Director of Social Services City of Richmond, Richmond, Virginia "This is the book I've been waiting for. It provides not only a linear approach to program design, but gives language to the tacit knowledge many planners have of the circular nature of their work. Both linear and circular thinking are important to planning processes and now we have a resource for teaching." —Jon E. Singletary, PhD, MSW, MDiv, Baylor University, School of Social Work The first text on program planning to guide readers in selecting program planning approaches appropriate to setting, culture, and context Valuable for students and practitioners in the social work, public administration, nonprofit management, and community psychology fields, Comparative Approaches to Program Planning provides practical and creative ways to effectively conduct program planning within human service organizations. Written by leaders in the social work education community, this innovative book explores program planning as a multi-layered and complex process. It examines both a traditional linear problem-solving model as well as an alternative emergent approach to program planning, helping professionals to successfully develop and enact effective and culturally competent planning in organizations and communities.

Schedule Centered Planning Jan 28 2020 The best way to assure the success of a project is to create a suitable project plan. The project plan is a vision of the future, a blueprint for how the project should proceed. A properly developed plan will provide a high degree of predictability of how the project will evolve, and the insights gained during planning will help the project manager to quickly and effectively deal with the unpredictable. Schedule Centered Planning is not a new approach, but it is unique, reflecting insights gained in 25 years of successfully managing projects. It recognizes that a properly developed schedule must reflect all other aspects of planning; it advocates iterative development so projects that cannot use Agile can still be Agile-like; and it stresses the concurrent nature of planning, i.e. that risk analysis must be performed in parallel with schedule development. When properly applied, the approach and the insights presented will greatly reduce, possible even eliminate the chaos that seems to be inevitable on too many projects. Included in the book is an appendix which shows how to use fields, filters, groups and views to turn Microsoft Project into a powerful planning tool, to create a schedule which truly is a project plan! If you are new to planning, or if you manage large, complex projects, deal with multidisciplinary teams, or work in an environment where the focus is primarily on the schedule, then this book is for you.

Water Resources and Land-Use Planning: A Systems Approach May 24 2022 This volume constitutes the proceedings of the NATO Advanced Study Institute on Water Resources and Land-Use Planning that was held in Louvain-la-Neuve, Belgium, July 3-14, 1978. In the pre-paration of the two-week NASI, we identified 12 major goals and objectives, knowing well, at the time, that the satisfaction of all priorities would be an impossible task. It is instructive that we share these early goals and objectives with our readers prior to evaluating the NASI's contribution. 1. Relate and analyze water resources (water quantity and quality, surface and groundwater) and related land resources in a multi objective framework. 2. Identify and relate the scientific, technological, institutional, societal, legal and political aspects of water and related land resources to policy decisions. 3. Promote and foster the transfer of technological information and assistance in water related land resources within the various levels of government. 4. Analyze the above three objectives and goals in light of the experience gained by the institute participants via case studies. 5. Improve communication and understanding among the various disciplines involved in water and related land resources. 6. Discuss and analyze the applicability of advanced planning methodologies germane to water and related land resources. 7. Identify current and projected future water and related land resources problems and issues and suggest ways to alleviate their respective and interrelated impacts.
