Gynecology in Traditional Chinese Medicine - Vietnamese Edition Nov 16 2021 *Gynecology in Traditional Chinese Medicine (Vietnamese Edition)* compiled based on the clinical and other medical lectures. It is easy to read. The part of treatment method based on etiology and pathology, differentiation and prescription and medicinal herbs as well as acupuncture points. This book covers the special characteristics of female anatomy, physiology and pathophysiology and the importance of the menstrual cycle as an indicator of systemic balance. The principles of Chinese diagnosis and treatment as they pertain to the female system are explained and

discussed. This includes common conditions such as: - A. Abnormal menstruation, leucorrhea, dysmenorrhea, amenorrhea, menopause, premenstrual syndrome (PMS), and uterine bleeding. B. Pregnancy disorders: Morning sickness, abdominal pain and vaginal bleeding during pregnancy. C. Post-partum diseases: Abdominal pain, constipation, lactation deficiency, lochia and infertility. Other common conditions are also explained.

Human Malformations and Related Anomalies

Dec 25 2019 This widely acclaimed reference work gives a comprehensive survey of all significant human malformations and related anomalies from the perspective of the clinician. The anomalies are organized by anatomical

system and presented in a consistent manner, including details of the clinical presentation, epidemiology, embryology, treatment and prevention for each anomaly. When known, the molecular or other pathogenetic basis for the malformation is given. Most anomalies are illustrated by photographs or drawings. Specific malformations are linked to syndromes through the extensive use of differential diagnosis tables. Over a decade has passed since the first edition of this book was published, and the revised edition fully incorporates the advances made in the field during the intervening years.. It reflects new understanding of human developmental biology that has emerged from molecular, cytogenetic, and biochemical studies; new observations by clinicians as well as enhanced diagnostic and prevention capacities; and more accurate and comprehensive epidemiology. By condensing much of the information presented in the first volume of the previous edition, and exercising rigorous editorial control, Drs.

internal anatomy of teeth and provides a complete review of the literature concerning the current state of research employing contemporary imaging tools such as micro-CT and CBCT, which offer greater accuracy whether using qualitative or quantitative approaches. In order to facilitate the management of complex anatomic anomalies, specific clinical protocols and valuable practical tips are suggested. In addition, supplementary material consisting in high-quality videos and images of different anatomies obtained using micro-CT technology is made available to the reader. The book was planned and developed in collaboration with an international team comprising world-recognized researchers and experienced clinicians with expertise in the field. It will provide the readers with a thorough understanding of canal morphology and its variations in all groups of teeth, which is a basic prerequisite for the success of endodontic therapy.

This book is a dedicated text to learn pathologic images seen during EUS. The digital anatomy correlation used in this work is the natural continuation of efforts to apply the University of Colorado Visible Human data set to gastroenterology. The Visible Human data set was created by Dr. Vic Spitzer and colleagues at the University of Colorado and is currently housed at the university's Center for Human Simulation. The data set consists of high resolution transaxial digital images captured as cadavers were abraded away at 1 mm or less depths. These images are compiled into blocks of data and each structure is identified. This information can be used to pull out and manipulate 3-D structures as well as allowing one to review planar anatomy in any orientation. Using the Visible Human dataset, one should be able to find a normal anatomy correlate to any image found during a EUS examination. However, as important as normal anatomy is, it is the abnormal features which are the crux of

ist verbunden mit 2 stofflichen Begriffen: den
Antigenen und den Antikörpern. Antigene sind
solche körperfremden Agenzien, deren
Eindringen in den tierischen Organismus zur
Bildung von Antikörpern führt. Antikörper sind
Proteine, welche in Körperzellen und im Blut
auftreten und hier als solche nachgewiesen
werden können. Durch die Bildung von
Antikörpern wird die Reaktivität des Organismus
gegenüber dem Antigen in bestimmter Weise
verändert. Diese veränderte Reaktionsfähigkeit
kann biologisch zweckmäßig sein, wenn sie
darin besteht, die Eliminierung körperfremder

Stoffe einzuleiten oder Giftstoffe (Toxine) unschädlich zu machen und somit die Resistenz des Organismus gegen deren schädliche Reizwirkungen zu steigern. Sie kann aber auch biologisch unzweckmäßig sein, wenn es zu erhöhter Empfindlichkeit gegen bestimmte Fremdstoffe kommt, wie bei der Anaphylaxie oder Allergie. Antigene sind die immunitätsauslösenden Fremdstoffe, während die vom Organismus als Antwort auf den antigenen Reiz gebildeten Antikörper Immunität verleihen und somit die eigentlichen Träger des Immunitätszustandes sind.

Acupuncture and Chinese Medicine Jan 26 2020 Charles Buck draws on three decades of study, practice and teaching in this book to provide a relevant and engaging account of the

origins of acupuncture and Chinese medicine. From its pre-Han dynasty roots to Chinese medicine as we know it today, Buck covers the key texts, the main scholars and the concepts they have contributed, emphasising those that are more relevant to clinicians wishing to understand the authentic tradition. The information presented is based on diverse sources including original translations of Chinese sources and interpretations of the work of many prominent medical sinologists. With Buck's lucid and engaging style, *Roots of Modern Practice* provides an accessible and authoritative resource that will help practitioners and students deepen their understanding of this great medical tradition. A practical and modern appreciation of China's medical wisdom, this book will be of great value to students and practitioners of Chinese medicine and acupuncture, and anyone interested in the roots of this time-honoured medicine.

Warm Disease Theory: Wen Bing Xue Oct 27 2022 In Chinese medicine there are four classics that all serious students are required to study.

These include the Classic of Internal Medicine (Nei Jing), Treatise on Cold Damage (Shang Han Lun), Synopsis of the Golden Chamber (Jin Kui Yao Lue), and "Warm Disease Theory (Wen Bing Xue). Warm Disease Theory" is the most modern of the four classics. Although referred to as a classic, in this context, the term "classic" means an area of classical study rather than a single classical text. Even though there are numerous references to warm diseases in very ancient texts, warm disease was not developed as an independent system until the Qing dynasty. There were several schools of warm disease, dating from the Ming and Qing dynasties, but until the time this text was written there had never been an attempt to integrate their ideas into an overview. The five medical experts who most significantly influenced the development of Warm Disease theory were Wu You Ke, Ye Tian Shi, Xue Sheng Bai, Wu Ju Tong, and Wang Meng Ying. The first of these, Wu You Ke, lived in the Ming dynasty. He put forward the theory

of pestilence qi (li qi) which explained the role of certain infectious factors in the etiology of communicable diseases. His was the first theory to assert that warm pathogens enter the body through the mouth and nose. He published these ideas in his "Treatise on Acute Epidemic Warmth (Wen Yi Lun)." The other four medical experts all lived and wrote during the Qing dynasty. Dr Ye Tian Shi introduced the theory that warm diseases develop and transmit through four aspects, namely the defense, qi, construction, and blood aspects. His lectures and teachings were edited by his disciples and published in the "Treatise on Warm Heat (Wen Re Lun)". Xue Sheng Bai concentrated on discussing damp-heat disease factors. He clearly explained that damp-heat usually occurs from a combination of external yang brightness and internal greater yin factors affecting each other. He published his ideas in his "Detailed Analysis of Damp-Heat (Shi Re Tiao Bian). " Dr Wu Ju Tong expanded on the ideas of Dr Ye Tian Shi by developing a

system of differential diagnosis based on the pathological changes in the triple burner. He summarized his findings and published them in his "Detailed Analysis of Warm Diseases (Wen Bing Tiao Bian)." Dr Wang Meng Ying developed insights on the cause of warm fevers, their symptoms, and their treatment methods, by applying the theories set down in the "Classic of Internal Medicine and Treatise on Cold Damage" to the views of his renowned contemporaries. He published his ideas in several books, the most important of which is "Warm Disease Latitudes and Longitudes (Wen Re Jing Wei)." However, even these great Ming and Qing dynasty doctors of warm disease, on whose works this text is based, only had partial insights; their views were relatively fragmentary. "Warm Disease Theory" is the first text to integrate the views of every school, the first to undertake a comprehensive discussion of the foundations of warm disease theory and the clinical treatment of warm

diseases. It is in fact such a valuable source of theoretical and therapeutic information that it is often considered a modern classic. The text is arranged in two sections. The first introduces all the basic information about warm disease, including its history, disease causes, pattern identification, and general diagnostic and treatment methods. The second section devotes a separate chapter to each of the different warm diseases. It deals with the disease factors, clinical manifestations, pulses, and treatments in the warm diseases of the four seasons including wind warmth, spring warmth, summerheat warmth, damp warmth, latent summerheat warmth, autumn dryness, and warm toxins. In each of these warm diseases, the disease concepts, etiologies, pathologies, main points of diagnosis and treatment policies are discussed first, then the patterns and treatments of their characteristic disease transformations are explained.
