[Advances in Electromagnetic Fields in Living Systems](#) Jan 10 2021 Health Effects of Cell Phone Radiation will offer a concentrated and up-to-date overview on the effects of radio frequencies on human tissue. While significant advances are being made on many fronts, ranging in frequency from quasi-static to the optical regime, a special emphasis of this volume is on current understanding of biological interactions of cellular mobile communication radiation. The use of cell-phones has experienced phenomenal growth - some estimate that there will be more than 3.5 billion users of these wireless devices by the end of 2010, worldwide. The widespread impact of these new wireless technologies has raised concerns about the safety of human exposure to radio-frequency (RF) energy emitted by these telecommunication devices. A better understanding of the biological effects of RF electromagnetic field is needed to safeguard against possible harm to the general population. Fortunately in recent years there has been a resurgence of research interest in achieving a quantitative understanding of the relationships between the biological effects of RF radiation and the physical variables that may cause them. A significant number of results have and are beginning to appear in the literature. This volume

reviews and assesses the biological effects of exposure to electromagnetic fields from wireless communication technology.

Seeking the Truth from Mobile Evidence Sep 05 2020 Seeking the Truth from Mobile Evidence: Basic Fundamentals, Intermediate and Advanced Overview of Current Mobile Forensic Investigations will assist those who have never collected mobile evidence and augment the work of professionals who are not currently performing advanced destructive techniques. This book is intended for any professional that is interested in pursuing work that involves mobile forensics, and is designed around the outcomes of criminal investigations that involve mobile digital evidence. Author John Bair brings to life the techniques and concepts that can assist those in the private or corporate sector. Mobile devices have always been very dynamic in nature. They have also become an integral part of our lives, and often times, a digital representation of where we are, who we communicate with and what we document around us. Because they constantly change features, allow user enabled security, and or encryption, those employed with extracting user data are often overwhelmed with the process. This book presents a complete guide to mobile device forensics, written in an easy to understand format. Provides readers with basic, intermediate, and advanced mobile forensic concepts and methodology Thirty overall chapters which include such topics as, preventing evidence contamination, triaging devices, troubleshooting, report writing, physical memory and encoding, date and time stamps, decoding Multi-Media-Messages, decoding unsupported application data, advanced validation, water damaged phones, Joint Test Action Group (JTAG), Thermal and Non-Thermal chip removal, BGA cleaning and imaging, In-System-Programming (ISP), and more Popular JTAG boxes - Z3X and RIFF/RIFF2 are expanded on in detail Readers have access to the companion guide which includes additional image examples, and other useful materials

Les cartes à puce Jul 24 2019 Devenue un objet usuel du quotidien, la carte à puce fait intervenir de très nombreuses technologies informatiques. Cet ouvrage présente les concepts fondamentaux de la carte à puce et ses domaines d'applications. Il nous révèle les caractéristiques des systèmes d'exploitation embarqués, la manière de programmer les cartes dans le langage Java Card, les techniques mises en œuvre pour garantir leur sécurité face aux attaques physiques et logiques, ainsi que les méthodes formelles pour faire de la carte un objet de confiance. Le fonctionnement interne de la carte SIM dans les téléphones mobiles est décrit en détail. Le passeport biométrique et le paiement mobile sont traités à travers la technologie RFID/NFC qui ouvre la voie à de nouvelles applications du sans contact.

Mobile (for) Development Dec 21 2021 With their widespread use in the Global South, mobile phones are attracting growing interest from international aid actors and local authorities alike, who are positioning mobile technology as a growth driver and a solution to many social problems. Initiated by giants of the digital industry, these policies are reviving old questions about technological development, the relationship between the market sector and States, and the role of technology in the inequalities between the Global North and Global South. Through a multi-sited

ethnography on maternal care in Ghana and India, this Element provides a first-hand look at initiatives that promise to improve poor women's health in the Global South through the use of mobile phones; a field known as Mobile Health or mHealth. Attentive to the way in which these technical objects modify power relations at both international and local levels, this Element also discusses how mHealth transforms care practices and healthcare.

Handbook of Research on Innovations in Non-Traditional Educational Practices Apr 24 2022 While many school districts and institutions of higher education still cling to the traditional agrarian school year with a factory model delivery of education and Carnegie units based on seat time when most people are no longer farmers, factory workers, or reliant on learning in a classroom, there are bursts of promising practices that buck the norm by questioning the educational value of these traditions. Though researchers have investigated the potential of students learning in their own homes via personalized instruction delivered by computers rather than attending traditional institutions, the status quo in education has remained stubbornly resistant to change. Mixed-reality simulations, year-round schooling, grouping students by competencies instead of age, and game-based teaching are just a few of the educational innovations that seek to maximize learning by recognizing that innovation is essential for successfully teaching students in the modern era. The Handbook of Research on Innovations in Non-Traditional Educational Practices is a comprehensive reference source that examines various educational innovations, how they have developed workarounds to navigate traditional systems, and their potential to radically transform teaching and learning. With each chapter highlighting a different educational innovation such as experiential learning, game-based learning, online learning, and inquiry-based learning and their applications in all levels of education, this book explores the issues and challenges these educational innovations face as well as their impact. It is intended for academicians, professionals, administrators, and researchers in education and specifically benefits academic deans, vice presidents of academic affairs, graduate students, faculty technology leaders, directors of teaching and learning centers, curriculum and instructional designers, policymakers, principals and superintendents, and teachers interested in educational change.

Side@Ways: Mobile Margins and the Dynamics of Communication in Africa Aug 29 2022 Marginality does not mean isolation. In Africa where people are permanently on the move in search, inter alia, of a 'better elsewhere', marginality means disconnection to obvious possibilities and the invisibility of the myriad connections that make life possible for the ordinarily sidestepped. This book is about the workings of networks of the mobile in Africa, a continent usually associated with the 'global shadows' of the world. How do changes in the possibilities for communication, with the recent hype of mobile technology, influence the social and economic dynamics in Africa's mobile margins? To what extent is the freedom associated with new Information and Communication Technologies reality or disillusion for people dwelling in the margins? Are ordinary Africans increasingly Side@Ways? How social are these emergent Side@Ways? Contributions to answering these and related questions are harvested from ethnographic insights by team members of the WOTRO funded 'Mobile Africa revisited' research programme hosted by the African Studies Centre, Leiden, The Netherlands.

The Melanesian World Jul 28 2022 This wide-ranging volume captures the diverse range of societies and experiences that form what has come to be known as Melanesia. It covers prehistoric, historic and contemporary issues, and includes work by art historians, political scientists, geographers and anthropologists. The chapters range from studies of subsistence, ritual and ceremonial exchange to accounts of state violence, new media and climate change. The 'Melanesian world' assembled here raises questions that cut to the heart of debates in the human sciences today, with profound implications for the ways in which scholars across disciplines can describe and understand human difference. This impressive collection of essays represents a valuable resource for scholars and students alike.

Mobile Phones: The New Talking Drums of Everyday Africa Oct 31 2022 'We cannot imagine life now without a mobile phone' is a frequent comment when Africans are asked about mobile phones. They have become part and parcel of the communication landscape in many urban and rural areas of Africa and the growth of mobile telephony is amazing: from 1 in 50 people being users in 2000 to 1 in 3 in 2008. Such growth is impressive but it does not even begin to tell us about the many ways in which mobile phones are being appropriated by Africans and how they are transforming or are being transformed by society in Africa. This volume ventures into such appropriation and mutual shaping. Rich in theoretical innovation and empirical substantiation, it brings together reflections on developments around the mobile phone by scholars of six African countries (Burkina Faso, Cameroon, Ghana, Mali, Sudan and Tanzania) who explore the economic, social and cultural contexts in which the mobile phone is being adopted, adapted and harnessed by mobile Africa.

Inside Bluetooth Low Energy Oct 07 2020 Bluetooth Low Energy (LE) is one of the latest enhancement to Bluetooth technology and, as the name suggests, it is aimed at ultra low power devices, such as heart rate monitors, thermometers, and laboratory sensors. Due to very low power

consumption, devices compliant with this standard can operate for months or even years on coin cell batteries without the need for recharging. This cutting-edge book helps you understand the whats, whys, and hows of Bluetooth LE. It includes a broad view of the technology, identifies the various building blocks and explains how they come together. The book explains the architecture of Bluetooth LE stack and the functionality provided by each of the layers. You find expert guidance in setting up your own system in a quick and efficient manner with inexpensive, easily available hardware and just a couple of PCs running Linux. Additionally, this practical volume features exercises and sample programs to help you get a first-hand feel for how the technology works.

Mobile Learning May 26 2022 As with television and computers before it, today's mobile technology challenges educators to respond and ensure their work is relevant to students. What's changed is that this portable, cross-contextual way of engaging with the world is driving a more proactive approach to learning on the part of young people. The first full-length authored treatment of the relationship between the centrality of technological development in daily life and its potential as a means of education, *Mobile Learning* charts the rapid emergence of new forms of mass communication and their potential for gathering, shaping, and analyzing information, studying their transformative capability and learning potential in the contexts of school and socio-cultural change. The focus is on mobile/cell phones, PDAs, and to a lesser extent gaming devices and music players, not as "the next new thing" but meaningfully integrated into education, without objectifying the devices or technology itself. And the book fully grounds readers by offering theoretical and conceptual models, an analytical framework for understanding the issues, recommendations for specialized resources, and practical examples of mobile learning in formal as well as informal educational settings, particularly with at-risk students. Among the topics covered:

- Core issues in mobile learning
- Mobile devices as educational resources
- Socioeconomic approaches to mobile learning
- Creating situations that promote mobile learning
- Ubiquitous mobility and its implications for pedagogy
- Bridging the digital divide at the policy level

Mobile Learning is a groundbreaking volume, sure to stimulate both discussion and innovation among educational professionals interested in technology in the context of teaching and learning.

Proceedings XIth ICPHS Jun 22 2019

Intergenerational solidarity in libraries / La solidarité intergénérationnelle dans les bibliothèques Sep 29 2022 Rapid and intensive changes in the information landscape cause changes in social relationships and, consequently, in relations between generations. Within their social role libraries should work actively to reduce age segregation and isolation, and build cohesive society through intergenerational services and programmes. The authors speak about the intergenerational dialogue in libraries - theories, research and practice - and about reading as a link between generations, thus offering to libraries strategies for establishing social cohesion.
