[Geologic Processes and Events | The Changing Earth | Geology Book | Interactive Science Grade 8 | Children's Earth Sciences Books](#) Jun 13 2021 Fossils are evidences of lives thousands of years ago. Archaeologists search all over the world to find and study them. The purpose of this interactive science book is to help students understand how fossils show change in life and environmental conditions throughout geologic time. Students will also learn about absolute and relative dating, and what their uses are. Get a copy today.

Earth's Darkest Hour - Man's Darkest Hour 01 2020 This BOOK reveals deep truths found in the Bible concerning the Last Days in mankind's future that few scholars, if any, have ever pieced together. During the End Times, devastating events will occur to such extraordinary proportions that it will be the darkest times the earth and mankind will ever face. The author explains the Last Years of mankind in precise, easy to understand language and format. This book is written for both the scholar and the student to offer hope to all with explanation of how to be ready and escape this darkest devastation that mankind will ever experience. There is a way of escape from the Great Tribulation; the seven-year period of extraordinary disasters that will befall the earth and mankind by earthquakes and large asteroid or asteroid-like objects that deface the earth's surface. One ruler takes over the world by force, killing billions of people. This same ruler will control everyone on the earth except those who refuse his mark. The fate of those who take his mark and those who do not are discussed with exact Biblical references. What is his mark? The author shares his views and Biblical truth about this mark. Earth's Darkest Hour - Man's Darkest Hour also expounds on the following: Events that must happen before Earth's and Man's Darkest Hour takes place. How to escape the End Times disasters. The events that happen to those caught up in the seven-year Tribulation Period. This book describes the details of the seven-year Tribulation Period when the worst terrors in all of human history will take place on the earth and to mankind. This BOOK gives you the Biblical reasons why these events take place. The length of time the one world ruler will rule the earth and his outcome. This book tells you plainly what happens after Armageddon. Earth's Darkest Hour - Man's Darkest Hour gives you the population decreases on the earth, given in the Book of Revelation, that allows you to understand how devastating the End Times disasters will effect mankind as a whole. This BOOK describes the Antichrist's system in detail. You don't have to follow the Antichrist or take his mark. There is hope for those who find themselves living during the Tribulation Period; The Earth's Darkest Hour - Man's Darkest Hour.

Accretion of Extraterrestrial Matter Throughout Earth's History 27 2022 Every year Earth is bombarded with about 40,000 tons of extraterrestrial material. This includes microscopic cosmic dust particles shed by comets and asteroids in outer space, meteorites, as well as large comets and asteroids that have led to catastrophic events in the geologic past. Originally considered only a curiosity, extraterrestrial matter found on Earth provides the only samples we have from comets, asteroids, and other planets. Only recently mankind has started to actively collect extraterrestrial matter in space (Apollo program, Stardust mission) rather than to wait for its delivery to Earth. Still, most of our knowledge of the origin and evolution of our system is based on careful studies of meteorites, cosmic dust, and traces of large impact events in the geologic record such as the mass extinction that terminated the Cretaceous Period and led to the extinction of the dinosaurs. This book summarizes our current knowledge of the properties, origin, orbital evolution and accretion mechanism of extraterrestrial matter accreted on Earth and sheds light on accretion processes and fluxes in the geologic past. The chapters in the first part of the book are arranged in order to follow extraterrestrial matter from its origin in space, its orbital evolution on its way to Earth, its interaction with the Earth's magnetosphere and atmosphere to its more or less violent collision with the Earth's surface. In the second part of the book several chapters deal with the present-day flux of cosmic dust and meteorites to Earth. Finally, several chapters deal with the reconstruction of the accretion history of extraterrestrial matter on Earth, starting with the most recent geologic

past and ending with the very early, violent accretion period shortly after the formation of Earth, Moon and other solid planets in our solar system.

[Fragments of the Earth's Geology Or in the Beginning](#) Apr 23 2022 One Final Push is a dynamite devotional book full of inspirational poetry, testimonies, and other spirit filled writings. This book will encourage you and cause your faith to soar higher as it reveals the loving and patient heart of our Heavenly Father. You will want to draw closer to God and to know Him by His Spirit in a greater way. One Final Push is a prophetic book for this hour and will reveal strategic ways in how to remain joyful and steadfast as the church prepares for its One Final Push! Vanessa Bonner is an ordained minister and teacher of God's Word. She and husband, Ronald are founders of Families for Christ Ministry in Chocowinity, North Carolina. They have three grown children and three grandchildren. She is the author of the best-selling book, Help God I'm Single but I Don't Want to Be.

[Encyclopedia of Earth Myths](#) Nov 18 2021 Richard Leviton has become the pre-eminent authority on sacred sites and visionary geography. Through books such as Signs on the Earth, The Emerald Modern, and The Galaxy on Earth he has explored both the personal and universal aspects of our connection to the planet. Now he shows in Encyclopedia of Earth Myths how many of the oldest and most evocative of the world's myths contain a secret about the Earth. They tell something vital about its make-up and history and our long-standing human relation to it. Encyclopedia of Earth Myths offers a unique blueprint for understanding world mythology. Carl Jung and Joseph Campbell tutored us in the psychological relevance of myths and the universality of their themes. Now Richard Leviton shows us how they reveal hidden clues about the Earth's spiritual landscape. Using clairvoyance and scholarship, Leviton examines 153 mythic topics in A-Z fashion drawn from 21 cultures to tease out their information about Earth's secret landscape. Each entry shows how something considered merely mythic--dragons, giants, the Minotaur, Holy Grail, Fountain of Youth, Golden Apples--actually decodes and illuminates the planet's esoteric make-up. Whether it's African, Tibetan, Native American, Hindu, Peruvian, Egyptian, Greek, or one of 14 other cultures, myths of many cultures all point to the planet. It's as if clues about the Earth's visionary geography have been scattered in all cultures, awaiting our retrieval and decoding. Encyclopedia of Earth Myths is also a practical tutorial for a new subject: our Earth. But this is virtually a new planet we're being introduced to here. The result is an essential reference for anyone interested in world mythology who wants to look beyond the cloak of mythic symbolism and see the world anew.

[Global Bio-Events](#) Jul 26 2022

[The Earth Chronicles Handbook](#) Mar 10 2021 An encyclopedic compendium of the myths and actual events from humanity's ancient civilizations that reveal the influence of visitors from the 12th planet--the Anunnaki • Offers easy access to the mythic characters and subjects covered by the seven books of The Earth Chronicles series • Provides alphabetical listings to the terminology of ancient civilizations concerning their gods, kings, cultures, and religions • Contains detailed summations, commentaries, and instructions for locating topics within all the author's books The Earth Chronicles series, a historical and archaeological adventure into the origins of mankind and planet Earth, began with the publication of the bestselling The 12th Planet. The series is based on the premise that the myths from the world's earliest civilizations were in fact recollections of actual events and that the gods of ancient peoples were visitors to Earth from another planet--the Anunnaki, inhabitants of 12th planet. The series' books include The 12th Planet, The Stairway to Heaven, The Wars of Gods and Men, The Lost Realms, When Time Began, The Cosmic Code, and The End of Days, all products of the author's unmatched study of the ancient records of Sumer, Babylonia, Assyria, Israel, and Egypt and the civilizations of pre-Columbian America. Unearthing the hidden history of Earth and mankind, the series uses the past to unveil the meaning of the prophesied future. Zecharia Sitchin has created an encyclopedic compendium of the key figures, sites, concepts, and beliefs to provide a unique navigational tool through this entire opus. Entries are coded to indicate at a glance their cultural origin and contain summations, commentaries and guidance for locating the topics within all of his books, including Genesis Revisited, Divine Encounters, The Lost Book of Enki, The Earth Chronicles Expeditions, and Journeys to the Mythical Past.

[Classical Mechanics](#) Oct 05 2020 Intended for advanced undergraduates and beginning graduate students, this text is based on the highly successful course given by Walter Greiner at the University of Frankfurt, Germany. The two volumes on classical mechanics provide not only a complete survey of the topic but also an enormous number of worked examples and problems show students clearly how to apply the abstract principles to realistic problems.

[The Encyclopedia of Very Important Events Through Modern History](#) Apr 4 2021 So, you know about history's biggest events... but do you know the story behind them? Knowledge is power - we've all heard that before and seen it proven right. Because of this, learning a bit of history can help us not make the same mistakes in the future. History, after all, is one big series of lessons we can apply to our present to avoid repeating the biggest errors ever made. The main problem is that sometimes history can get... kind of boring (sorry, historians!). But we're changing that for good. Divided into 54 incredibly engaging and well-told stories representing the biggest and most influential events that have taken place throughout modern history, The Encyclopedia of Very Important Events Through Modern History compiles humorous, inspiring, tragic and even disastrous stories that shaped the world to become - for better or for worse - what we know it as today. Discover the truth behind the most massive events in history, such as: - Isaac Newton and his apple - you know the story, right? But what if I told you the whole tale was a LOT more complex than simply a falling fruit? - You may be aware that WWI began with an assassination, but did you know that it was a wrong turn by a driver that set the stage for the world's second bloodiest war? Yikes! - And we all know how messy a divorce can get... but what about a divorce that caused a literal religious war across an entire nation and set half the country on fire... literally! This book will help you unlock the entire truth behind the largest events in history so get ready; it's a fascinating read. Grab a copy of The Encyclopedia of Very Important Events through Modern History and learn the historical facts and stories most people don't know about the events we all know!

Chicxulub: The Impact and Tsunami May 12 2021 This book tells the story of the catastrophic impact of the giant 10 Km asteroid Chicxulub into the ancient Gulf of Mexico 65.5 million years ago. The book begins with a discussion of the nature of asteroids and the likelihood of future Earth-impacts. The story then turns to the discovery of a global sediment layer attributed to the fallout from the impact and a piecing together of the evidence that revealed a monster crater, buried under the Gulf. Reviewed is the myriad of geological and fossil evidence that suggested the disastrous sequence of events occurring when a "nuclear-like" explosion ripped through the sea, Earth, and atmosphere, thus forming the mega-crater and tsunami. The aftermath of the Chicxulub's event initiated decades and more of major global climate changes including a "Nuclear Winter" of freezing darkness and blistering greenhouse warming. A chapter is dedicated to the science of tsunamis and their model generation, including a portrayal of the globally rampaging Chicxulub waves. The asteroid's global devastation killed off some 70% of animal and plant life including the dinosaurs. The study of an ancient Cambrian fossil bed suggests how "roll of the dice" events can affect the future evolution of life on Earth. We see how Chicxulub's apparent destruction of the dinosaurs, followed by their replacement with small mammals, altered forever the progress of human evolution. This book presents a fascinating glimpse through the lens of the natural sciences - the geology, climatology, and oceanography, of the effects of an enormous astronomical event.

The Key to Earth History Mar 22 2022 The Key to Earth History introduces students to the basic tools used by geologists to reconstruct the Earth's history, and shows how these tools can be used to chart the pattern of global environmental change since the formation of the Earth some 4600 million years ago. It tells a story of mountain building, climate change and of the evolution of life, and uses the North Atlantic region (Europe and North America) as a study area to illustrate this story. Divided into two parts, the book shows how stratigraphy is the key to understanding the history of the Earth. The first part examines basic stratigraphical methods used to establish, date and interpret the rock record as the product of a series of events which shaped Earth history. The second part presents the results obtained by geologists, who have used these stratigraphical tools to reconstruct the pattern of global environmental change through geological time and focuses on the geological evolution of the North Atlantic region. The Key to Earth History is essential reading for geologists, geographers and environmental scientists, as well as to all those interested in the story of the planet. "The authors provide no one with an alibi for bad stratigraphic teaching!" —Geoscientist "The aims of this introductory textbook are to explain the process and pattern of Earth history, to generate interest and enthusiasm, to make stratigraphy fun and exciting! These aims are admirably achieved." —The Holocene "This is a great little book! I found that, not only was everything covered, but that it was covered in a refreshing, readable, non-nonsense fashion." —Earth Science Reviews "The Key to Earth History really should be compulsory reading for all ... geology students." —Geologie

Other Worlds Than Our Sep 04 2020

Mother Earth's Revenge Feb 21 2022 Mother earth having been abused for so long is in a state of toxic shock. With her bountiful natural beauty and her children being devoured by huge corporate conglomerates followed by rogue and maverick nations she unleashes her anger on those who refuse to live in unity of mankind. As she does with her place in the universe more deeply established she purges herself of the demonstrative ego of man and regains control through the unity she has brought to her children. In ways only a mother can know.

Advances in Studies of Heterogeneities in the Earth's Lithosphere Aug 03 2020 This second special issue is in honor of Keiiti Aki. It focuses on recent advances in quantifying and interpreting heterogeneities in lithospheric structures and earthquake behavior. The volume provides a combination of reviews, methodological studies and applications on topics related to Aki's pioneering contributions. The discussed subjects include research associated with dynamic earthquake rupture. It also includes material on Aki and a list of his publications.

Geologic Processes and Events | The Changing Earth | Geology Book | Interactive Science Grade 8 | Children's Earth Sciences Books Jul 02 2020 Fossils are evidences of lives thousands of years ago. Archaeologists search all over the world to find and study them. The purpose of this interactive science book is to help students understand how fossils show changes in life and environmental conditions throughout geologic time. Final Events on Planet Earth Apr 11 2021

Notes, Critical, Illustrative, and Practical, on the Book of Daniel Aug 23 2019

Early Bird Earth Science Sep 16 2021 EARLY BIRD EARTH SCIENCE TEACHING GUIDE

Earth's Deep History Dec 19 2021 Rudwick tells the gripping story of the gradual realization that the Earth's history has not only been unimaginably long but also astonishingly eventful in utterly unexpected ways.

First Traces of Life on the Earth Feb 09 2021

Sciences of the Earth Jun 25 2022 The planet as seen by its inhabitants In two millennia, our knowledge of the planet and its natural laws and forces has undergone remarkable changes--from the religious belief of earth as the center of the universe to the modern astronomers' view that it is a mere speck in the cosmos. Now a first-of-its-kind reference work charts this remarkable intellectual progression in our evolving perception of the earth by surveying the history of geology, geography, geophysics, oceanography, meteorology, space science, and many other fields. Covers human understanding of the Earth in various times and cultures The Encyclopedia traces our understanding of the earth and its functioning throughout history, summarizing historical explanations of earthly occurrences, including explanations with no scientific basis. It presents the latest facts and theories, explains how our understanding of the earth has evolved, and shows why many outrageous and fanciful earlier ideas were accepted in their time. The coverage explores the physical phenomena that inform our knowledge, starting at the earth's core and extending outward through the mantle, crust, oceans, and atmosphere to the magnetosphere and

beyond. Charts the evolution of our perceptions The primary focus of the Encyclopedia is the history of the study of the earth. It also discusses the institutions that advanced and shaped science and probes the interplay between science, practical applications, and social and political forces. The result is a unified historical overview of the earth across a wide canvas of time and place, from antiquity to the space age. Its wide-ranging articles summarize subjects as diverse as geography and imperialism, environmentalism, computers and meteorology, ozone formation theories since 1800, scientific rocketry, the Scopes trial, and much more. Special Features Shows how diverse disciplines, from geology to space science, fit together in a coherent view of the earth * Explains earlier ideas and theories in the context of the beliefs and scientific knowledge of their time * Spotlights important institutions that have shaped the history of science * Explores relationships between science, practical applications, and sociopolitical concerns * Provides a subject index and an index of scientists with birth/death dates

Marine Electrical Practice Feb 27 2020 Marine Engineering Series: Marine Electrical Practice, Sixth Edition focuses on changes in the marine industry, including the application of programmable electronic systems, generators, and motors. The publication first ponders on insulation and temperature ratings of equipment, protection and discrimination, and AC generator. Discussions focus on construction, shaft-drive generators, effect of unbalanced loading, subtransient and transient reactance protection discrimination, fault current, measurement of ambient air temperature, and basis of machine ratings. The text then examines AC switchgear, automatic voltage regulators, DC generators, and DC switchgear. Topics cover switchgear for parallel-operated generators, protection against short-circuit, field regulators and the effect of tropical temperatures, compound wound generators, power generators, loading sharing, voltage comparison circuit, and amplifier and condition circuit. The manuscript surveys electric cables, motors, motor control gear, semiconductors, storage batteries, and battery control gear. Concerns include calculations to determine the size of battery required, types of storage batteries, rectifiers, tunnel diodes, maintenance of control gear, overload protection, insulation, sheathing, and flexible cords and cables. The publication is a dependable reference for marine engineers and researchers interested in marine engineering.

Remote Sensing and Global Climate Change Nov 06 2020 Experts report the state of the art in the study of global climate change using remote sensing techniques. Topics covered include the principles of remote sensing, the management of data, data requirements in climatology, the principles of modelling, the input of data into models, and the application of remote sensing to the atmosphere, ice and snow, seas and land. The book is highly topical given the current great public and scientific awareness of possible man-made changes to the climate. It is essential reading for anyone new to the field, and invaluable as a reference work to those already working in it.

A Select Library of the Nicene and Post-Nicene Fathers of the Christian Church: St. Augustin's City of God and Christian doctrine. [1907] Jul 22 2019

Tarzan at the Earth's Core and Other Tales Mar 30 2020 From the vaults of the SF Gateway, the most comprehensive digital library of classic SFF titles ever assembled, comes an ideal introduction to the fantastic worlds of one of the greatest adventure writers of all time, Edgar Rice Burroughs. The son of a Civil War veteran, Edgar Rice Burroughs was a prolific writer for the early pulp magazines. Famous the world over as the creator of Tarzan - and in SF circles for his Martian tales featuring John Carter - Burroughs is a household name. This omnibus collects six more tales of Tarzan of the Apes - perhaps the greatest pulp hero of all time: TARZAN AT THE EARTH'S CORE, TARZAN THE INVINCIBLE, TARZAN TRIUMPHANT, TARZAN AND THE CITY OF GOLD, TARZAN AND THE LION MAN and TARZAN AND THE LEOPARD MEN.

Outlines of the Earth's History: A Popular Study in Physiography Jan 08 2021 "Outlines of the Earth's History: A Popular Study in Physiography" by Nathaniel Southgate Shaler. Published by Good Press. Good Press publishes a wide range of titles that encompasses every genre. From well-known classics & literary fiction and non-fiction to forgotten?or yet undiscovered gems?of world literature, we issue the books that need to be read. Each Good Press edition has been meticulously edited and formatted to boost readability for all e-readers and devices. Our goal is to produce eBooks that are user-friendly and accessible to everyone in a high-quality digital format.

The Earth's Fragile System Dec 27 2019 The Earth's Fragile Systems is concerned with some of the most pressing and worrying of the problems afflicting our globe, problems that have been discussed in various forums and are well known not to be simple intellectually, practically or politically.

Zoologica Jan 28 2020

Earth's Glacial Record Nov 25 2019 This book discusses glacial or glacially-controlled sequences as markers of the Earth's geodynamic and climatic history.

Earth Hour May 24 2022 Click flashlights, light lanterns, and get ready to turn electric lights out to celebrate Earth Hour! Wherever you are, you can help our planet. Kids around the world use electric energy to do all kinds of things--adults do, too. From cleaning the clothes we play in, to lighting up our dinner tables, to keeping us warm and toasty when the weather is cold, electricity is a huge part of our lives. Unfortunately, it can also have a big impact on our planet. Earth Hour--a worldwide movement in support of energy conservation and sustainability--takes place each March and is sponsored by the World Wildlife Fund for Nature (WWF). During Earth Hour, individuals, communities, and businesses in more than 7,000 cities turn off nonessential electric lights for one hour. Across each continent--from the Eiffel Tower to the Great Wall of China to the Statue of Liberty--one small act reminds all of us of our enormous impact on planet Earth.

The Earth's Ionosphere Dec 07 2020 Although interesting in its own right, due to the ever-increasing use of satellites for communication and navigation, weather in the ionosphere is of great concern. Every such system uses trans-ionospheric propagation of radio waves, waves which must traverse the commonly turbulent ionosphere. Understanding this turbulence and predicting it are one of the major goals of the National Space Weather program. Acquiring such a prediction capability will rest on understanding the very topics of this book, the plasma physics and electrodynamics of the system. Fully updated to

reflect advances in the field in the 20 years since the first edition published Explores the buffeting of the ionosphere from above by the sun and from below by the lower atmosphere Unique text appropriate both as a reference and for coursework

[History: World History in 50 Events](#) Sep 28 2022 Do you want to learn how our planet and the life on it became what they are today Read about the 50 most important events in world history, from the beginning of time to the present day. This book is perfect for history lovers. Author James Weber did the research and compiled this huge list of events that changed our planet's history forever. Some of them include: - The Big Bang (13.8 billion years ago)- First Life on Earth (3.7 billion years ago)- The Era of the T-Rex (68 million years ago)- The Cretaceous-Paleogene Extinction that killed the Dinosaurs (65 million years ago)- The Yellowstone Supervolcanic Eruption (640,000 years ago)- The Last Mammoth on Earth (4,500 years ago)and many many more The book takes you through the most important events on Earth over the last 3 billion years. You will find pictures and explanations to every event, making this the perfect resource for students and anyone wanting to broaden their knowledge of history. Note: If you are looking for a book on world history from a human perspective, be sure to check out Human History in 50 Events. Download your copy now! Locutions to the World 2014 - Messages from Heaven about the near Future of our World

[World 2019 Messages from Heaven about the near Future of our World.](#) By our Lord and Saviour Jesus Christ and our Mother of Salvation Holy Virgin Mary. Virgin Mary is God's Final Preacher. God is always trying to lead man away from self-destruction. He sends his preachers. He sends his teachers. But these are snuffed out. Their words are not listened to and their invitations are rejected. So, finally, he has sent me. I am his final teacher, his final prophet. I am his last opportunity to change the course of history. There is no one behind me, no other message, no other signs than the ones that I will give. When I tell the world that it must listen to me, I am not speaking from a selfish and arrogant spirit. I am speaking as one who sees the destruction, the hopelessness of mankind if my words are not heeded. The fourth of five books from 2011 until 2015.

[Microwave Radiometry and Remote Sensing of the Earth's Surface and Atmosphere](#) Apr 15 2021 This book contains a selection of refereed papers presented at the 6 Specialist Meeting on Microwave Radiometry and Remote Sensing of the Environment held in Florence, Italy on March 15-18, 1999. Over the last two decades, passive microwave remote sensing has made considerable progress, and has achieved significant results in the study of the Earth's surface and atmosphere. Many years of observations with ground-based and satellite-borne sensors have made an important contribution to improving our knowledge of many geophysical processes of the Earth's environment and of global changes. The evolution in microwave radiometers aboard satellites has increased steadily over recent years. At the same time, many investigations have been carried out both to improve the algorithms for the retrieval of geophysical parameters and to develop new technologies. The book is divided into four main sections: three of these are devoted to the observation of the Earth's surface and atmosphere and the fourth, to future missions and new technologies. The first section deals with the study of sea and land surfaces, and reports recent advances in remote sensing of ocean wind, sea ice, soil moisture and vegetation biomass, including electromagnetic modelling and the assimilation of radiometric data in models of land surface processes. The following two sections are devoted to the measurement of atmospheric quantities which are of fundamental importance in climatology and meteorology, and, since they influence radio-wave propagation, they also impact on several other fields, including geodesy, navigational satellite and radioastronomy. The last section presents an overview of new technologies and plans for future missions.

[Earth-Shattering Events](#) Oct 17 2021 "A truly welcome and refreshing study that puts earthquake impact on history into a proper perspective." --Amos Nur, Emeritus Professor of Geophysics, Stanford University, California, and author of Apocalypse: Earthquakes, Archaeology, and the Wrath of God Since antiquity, on every continent, human beings in search of attractive landscapes and economic prosperity have made a Faustian bargain with the risk of devastation by an earthquake. Today, around half of the world's largest cities – as many as sixty – lie in areas of major seismic activity. Many, such as Lisbon, Naples, San Francisco, Teheran, and Tokyo, have been severely damaged or destroyed by earthquakes in the past. But throughout history, starting with ancient Jericho, Rome, and Sparta, cities have proved to be extraordinarily resilient: only one, Port Royal in the Caribbean, was abandoned after an earthquake. Earth-Shattering Events seeks to understand exactly how humans and earthquakes have interacted, not only in the short term but also in the long perspective of history. In some cases physical devastation has been followed by decline. But in others, the political and economic reverberations of earthquake disasters have presented opportunities for renewal. After its wholesale destruction in 1906, San Francisco went on to flourish eventually giving birth to the high-tech industrial area on the San Andreas fault known as Silicon Valley. An earthquake in

Earth's earliest documented sedimentary phosphates, one of the greatest accumulations of organic matter (the Shunga Event) and generation of the Earth's earliest supergiant petroleum deposit. The volume highlights the potential of the FAR-DEEP core archive for future research of the Great Oxidation Event and the biogeochemical cycles operating during that time. Welcome to the illustrative journey through one of the most exciting periods of planet Earth!
