Development of a Global Sourcing Strategy Through Purchasing Portfolio Management Sep 17 2021 Studienarbeit aus dem Jahr 2013 im Fachbereich BWL - Unternehmensführung, Management, Organisation, , Sprache: Deutsch, Abstract: Ever since the introduction E-Business solutions in the late 1990 ?s markets have been evolving to more transparency and immediacy. Having the capability of comparing prices and lead times the global key costumer base also has become more demanding in terms of price, quality and availability. These changes have been increasing market pressure especially within the trading industry which often adds no or little value to the original product. The tool, machine, working equipment and service provider, the XYGroup, with its headquarters in Germany offers almost seventy thousand articles; from simple steel grinding tools to high-complexity industry working equipment solutions. The products are mostly delivered from the German headquarters to the subsidiaries. The company has been operating since 1910. In 2012 Z ?s sales aomunted roughly to 100 million €. One of the 15 subsidiaries within XYis XY CHINA is situated in the directly governed municipality CHINA. The subsidiary was founded in 2002. In 2012 it accounted for 4% of total XYsales. The location (City in China) was chosen because it provides a mature infrastructure including a harbor and a convenient highway connection to Beijing. In 2012 CHINA has reported Gross Domestic Product per capita of 91,180.6 RMB which was the highest GDP per capita of all Chinese cities. Furthermore CHINA ?s real GDP had the highest growth rate of all Chinese cities, 13,8% in 2012. Key accounts are leading automotive as well as aircraft manufacturers. Due to the financial crash in 2008 and its aftermath sales declines in consumer as well as professional markets. Competition within the tool and machine industry has ever since become fierce and the subsidiary struggles with different internal as well as external factors. One of the indicators for the accentuation of competition within the Chinese market is the subsidiary ?s increasingly growing "Outsource Procurement Quota". This quota states the amount of goods not being ordered from the headquarters in Germany but locally in China or in other countries from external suppliers. What might be the reason the purchasing managers currently source an increasing number of goods locally or in other countries instead of sourcing from their mother company that states to provide reliable conditions and quality?

Revisiting Integrated Water Resources Management Jun 14 2021 The book includes seventeen excellent researched and documented papers that reflect the diversity of thought, ideas and experiences related to IWRM. They draw from an extensive, inclusive and geographically representative range of theoretical propositions and practical examples. These include the implementation status of the IWRM concept at local, basin, regional and national levels; its appropriateness for the twenty-first century; main implementation gaps from the institutional, legal, policy, governance, management and technical viewpoints; the likelihood that IWRM's entrenchment in laws, regulations and policies has led to smoother implementation and the reasons why that has been the case; reflexions on whether the attention given to IWRM is pushing other alternatives to the policy periphery; and the new conceptual constructions that can be put forward for discussion in the international arena. For the development and water communities it is imperative to debate and reach towards more illustrative conclusions regarding whether the promotion of the IWRM concept and its actual implementation status have been beneficial for development and how the notion could evolve to achieve this end. In-depth objective and constructive discussions, arguments, proposals and ideas are put forward for analysis by all interested parties. The book has the objective of fostering scholarly exchange, encouraging intellectual debate and promoting the advancement of knowledge and understanding of IWRM as a concept, as a goal per se and as a strategy towards development goals. This book was published as a special issue of the International Journal of Water Resources Development.

HYDROGEOLOGY: PROBLEMS WITH SOLUTIONS Jan 10 2021 Numerical calculations are inevitably required in the field of hydrogeology and play a significant role in dealing with its various aspects. As often as not, students are seen struggling while solving numerical problems based on hydrogeology, as they find difficulty in identifying the correct concept behind the problem and the formula that can be applied to it. Also, there is a dearth of books, which help the readers in solving numerical problems of varied difficulty level and enable them to have a firm grounding in the subject of hydrogeology. The book Hydrogeology: Problems with Solutions fills this void in the finest way, and as desired, chiefly focuses on the sequential steps involved in solving the problems based on hydrogeology. It concisely covers the fundamental concepts, advanced principles and applications of hydrogeological tasks rather than overemphasising the theoretical aspects. The text comprises sixty solved hydrogeological problems, which are logically organised into ten chapters, including hydrological cycle, morphometric analysis, hydrological properties, groundwater flow, well hydraulics, well design and construction, groundwater management, seawater intrusion, groundwater exploration and groundwater quality. The practice of pedagogy of hydrogeology in yesteryears was a two-tier approach of theoretical principles with toy problems and in-situ case studies for research start-up. This book bridges the gap between routine problem-solving and state-of-the-practice for future. The book is primarily intended for the undergraduate and postgraduate students of Earth Sciences, Civil Engineering, Water Resources Engineering, Hydrogeology and Hydrology. It also serves as an excellent handy reference for all professionals.KEY FEATURES • Key Concept succinctly explores the models, methods and theoretical concepts related to each problem. • Necessary equations and formulae are specified. • Appendices and Glossary are included, leaving no scope to refer any other book. • Bibliography broadens the scope of the book.

Wind Solar Hybrid Renewable Energy System Aug 24 2019 This book provides a platform for scientists and engineers to comprehend the technologies of solar wind hybrid renewable energy systems and their applications. It describes the thermodynamic analysis of

wind energy systems, and advanced monitoring, modeling, simulation, and control of wind turbines. Based on recent hybrid technologies considering wind and solar energy systems, this book also covers modeling, design, and optimization of wind solar energy systems in conjunction with grid-connected distribution energy management systems comprising wind photovoltaic (PV) models. In addition, solar thermochemical fuel generation topology and evaluation of PV wind hybrid energy for a small island are also included in this book. Since energy storage plays a vital role in renewable energy systems, another salient part of this book addresses the methodology for sizing hybrid battery-backed power generation systems in off-grid connected locations. Furthermore, the book proposes solutions for sustainable rural development via passive solar housing schemes, and the impacts of renewable energies in general, considering social, economic, and environmental factors. Because this book proposes solutions based on recent challenges in the area of hybrid renewable technologies, it is hoped that it will serve as a useful reference to readers who would like to be acquainted with new strategies of control and advanced technology regarding wind solar hybrid systems
