**Guided Instruction** Nov 05 2020 You know that repeating the same words and the same instructions—or simply announcing the answers to questions—doesn't help students learn. How do you get past the predictable and really teach your kids how to learn? Douglas Fisher and Nancy Frey say that helping students develop immediate and lifelong learning skills is best achieved through guided instruction, which they define as "saying or doing the just-right thing to get the learner to do cognitive work"—in other words, gradually and successfully transferring knowledge and the responsibility for learning to students through scaffolds for learning. In this helpful and informative book, they explain how guided instruction fits your classroom and works for your students. Their four-part system for implementation consists of these elements: \* Questioning to check for understanding. \* Prompting to facilitate students' thinking processes and processing. \* Cueing to shift students' attention to focus on specific information, errors, or partial understandings. \* Explaining and modeling when students do not have sufficient knowledge to complete tasks on their own. Each element is thoroughly explained and illustrated with numerous examples drawn from the authors' extensive experience in the classroom and their observations of hundreds of expert teachers, as well as a broad sampling of relevant research. Aimed at teachers at all grade levels, across the curriculum, Guided Instruction will help you provide timely and meaningful scaffolds that boost students to higher levels of understanding and accomplishment.

Rhetoric in the Flesh Dec 26 2019 Rhetoric in the Flesh is the first book-length ethnographic study of the gross anatomy lab to explain how rhetorical discourses, multimodal displays, and embodied practices facilitate learning and technical expertise and how they shape participants' perceptions of the human body. By investigating the role that discourses, displays, and human bodies play in the training and socialization of medical students, T. Kenny Fountain contributes to our theoretical and practical understanding of the social factors that make rhetoric possible and material in technical domains. Thus, the book also explains how these displays, discourses, and practices lead to the trained perspective necessary for expertise. This trained vision is constructed over time through what Fountain terms embodied rhetorical action, an intertwining of body-object-environment that undergirds all scientific, medical, and technical work. This book will be valuable for graduate and advanced

undergraduate courses in technical and professional communication (technical communication theory and practice, visual or multimodal communication, medical technical communication) and rhetorical studies, including visual rhetoric, rhetoric of science, medical rhetoric, material rhetoric and embodiment, and ethnographic approaches to rhetoric.

**The New College Classroom** Jan 19 2022 What the latest science of learning tells us about inspiring, effective, and inclusive teaching at the college level. College instruction is stuck in the past. If a time traveler from a century ago arrived on today's campuses, they would recognize only too well the listlessness of the lecture hall and the awkward silence of the seminar room. Yet we know how to do better. Cathy N. Davidson and Christina Katopodis, two of the world's foremost innovators in higher education, turn to the latest research and methods to show how teachers at every kind of institution can help students become independent, creative, and active learners. The New College Classroom helps instructors in all disciplines create an environment that is truly conducive to learning. Davidson and Katopodis translate cutting-edge research in learning science and pedagogy into ready-to-use strategies to incorporate into any course. These empirically driven, classroom-tested techniques of active learning—from the participatory syllabus and ungrading to grab-and-go activities for every day of the term—have achieved impressive results at community colleges and research universities, on campus, online, and in hybrid settings. Extensive evidence shows that active-learning tools are more effective than conventional methods of instruction. Davidson and Katopodis explain how and why their approach works and provide detailed case studies of educators successfully applying active-learning techniques in their courses every day, ensuring that their students are better prepared for the world after college.

**Advances in Medical Education** Dec 06 2020 About 550 registrants from 51 different countries attended the Seventh Ottawa Conference on Medical Education and Assessment in Maastricht. We received 525 abstracts for the conference, divided in thematic poster sessions and platform presentations. Organising the conference was an honour and we tried to meet the high standards of a friendly and relaxed atmosphere which has characterized previous Ottawa conferences. During and after the conference about 250 papers were submitted for publication in the conference proceedings, leaving us little time for a post-conference depression. Despite the large number of papers, the editors have attempted to review and edit the papers as care fully as possible. Occasionally, however, correspondence exceeded reasonable deadlines, preventing careful editing of a small number of the papers. Although we felt that our editorial task was not quite finished, we nevertheless decided to include these papers. We thank the many authors for their enthusiastic and prompt response to - occasionally tedious - editorial suggestions and requests. We are sure that this collective effort has resulted in a book that will make an important contribution to the field of medical education. The editors want to thank Jocelyn Flipppo-Berger whose expertise with desk top publishing and perseverance was a great help.

**The Clinically Oriented Gross Anatomy Lab Workbook** Jul 21 2019 The gross anatomy lab is the only place where a student who is studying to be a physician, physician assistant, nurse, or physical therapist can actually see and learn how the organs, blood vessels, nerves, bones, joints, and muscles of the body are spatially related to each other. The gross anatomy lab experience, however, is too often primarily focused on the dissection and identification of organs, muscles, nerves, and blood vessels. There are not any gross lab dissectors or workbooks that associate the knowledge learned in gross lab with the skills applied in clinical practice. This workbook has been designed specifically to extend the gross anatomy lab experience into the clinical realm. Each chapter in this workbook focuses on one of the major body regions. In the first pages of each chapter, questions of various types (multiple choice, fill-in-the-blanks, and essay) are presented to identify the clinical anatomy you should know about the body region you are dissecting in gross lab. The questions focus on the anatomical basis of common injuries, conditions, and diseases and the surface anatomy knowledge that is applied during physical examination of patients. The answers to

these questions, which are provided in the last pages of each chapter, are what your clinical instructors will expect you to understand and be able to apply when you are in your clinical rotations. This workbook will help you experience gross lab in its most meaningful sense: the opportunity to have the cadaver, the physical remains of your first patient, help teach you how to visualize in your mind and examine the internal organs, muscles, nerves, and blood vessels of all the living patients you will try to help in your professional life.

**The Oxford Handbook of Undergraduate Psychology Education** Feb 26 2020 The Oxford Handbook of Undergraduate Psychology Education is dedicated to providing comprehensive coverage of teaching, pedagogy, and professional issues in psychology. The Handbook is designed to help psychology educators at each stage of their careers, from teaching their first courses and developing their careers to serving as department or program administrators. The goal of the Handbook is to provide teachers, educators, researchers, scholars, and administrators in psychology with current, practical advice on course creation, best practices in psychology pedagogy, course content recommendations, teaching methods and classroom management strategies, advice on student advising, and administrative and professional issues, such as managing one's career, chairing the department, organizing the curriculum, and conducting assessment, among other topics. The primary audience for this Handbook is college and university-level psychology teachers (at both two and four-year institutions) at the assistant, associate, and full professor levels, as well as department chairs and other psychology program administrators, who want to improve teaching and learning within their departments. Faculty members in other social science disciplines (e.g., sociology, education, political science) will find material in the Handbook to be applicable or adaptable to their own programs and courses.
