What are the Questions and Other Essays: Further Contributions to Modern Economics Introduction to Modern Economic Growth Lectures on Microeconomics Otto Neurath's Economics in Context Manual of References and Exercises in Economics, Vol. 2 International Macroeconomics Founder of Modern Economics: Paul A. Samuelson The Economics Book Economic Geography Paul Samuelson and the Foundations of Modern Economics Postmodern Moments in Modern Economics Arrow and the Ascent of Modern Economic Theory Great Economists Since Keynes The Age of Economic Measurement Social Ontology and Modern Economics Philosophy of Economics The Nature and State of Modern Economics Principles and Problems of Modern Economics Modern Economics Issues in Contemporary Economics Essays on: The Nature and State of Modern Economics Institutions, Innovation, and Industrialization The MIT Dictionary of Modern Economics, fourth edition Relational Anthropology for Contemporary Economics Economic Anthropology Statistics and the German State, 1900-1945 William Stanley Jevons and the Making of Modern Economics History of Economic Thought Aquinas and the Market Pioneers of Modern Economics in Britain Main Currents in Modern Economics Student Workbook in Modern Economics Divine Providence in Early Modern Economic Thought Microeconomic Principles and Problems The Puzzle of Modern Economics From New Era to New Deal The Methodology of Economics, Or, How Economists Explain Joan Robinson and Modern Economic Theory A Guide to Modern Economics Money, Commerce, and Economics in Late Medieval English Literature

Manual of References and Exercises in Economics, Vol. 2 Jun 26 2022 Excerpt from Manual of References and Exercises in Economics, Vol. 2: For Use With, Modern Economic Problems This Manual follows the lines of the "Manual of References and Exercises," published in the autumn of 1916, to accompany the volume on Economic Principles. The literature of the field treated in "Modern Economic Problems" is now so vast that no more than a few of the titles could be included in the following lists. The references given are usually the more recent of those that would be helpful to students desiring to go more deeply into the subjects. The collection of questions and exercises is based upon the list printed, first in 1904 and much enlarged in 1910, in the author's "Principles of Economics." Much material has been added that had been shaped and used in class work at Princeton University, and a few other problems have been drawn from, or suggested by, other published lists. The plan of indicating the original sources of a number of these questions has been found to be too difficult to be completed for the present edition. Indeed, it appears that numerous test problems have become a common heritage for economic teachers, and one can hardly be sure when one has traced the ideas to their original sources. Some of them have appeared in somewhat differing forms in various lists for a half century past. Particular acknowledgment is made to my colleagues, Professors Adriaance and McCabe, who devised a number of the questions for class use; and to Dr. Stanley E. Howard, who has given most valuable aid in the preparation of this Manual in its present form. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

The Age of Economic Measurement Sep 17 2021 The twentieth-century could be justifiably called the age of measurement, yet few scholars have looked at the development of measurement and its impact on economics. What accounted for the emergence and establishment of economic measurement as a critical component of modern economics? What questions and problems created the drive to measurement, and how have economists reacted to the changing status of numbers in their field? The eleven essays presented here include the work of William Stanley Jevons, Irving Fisher, Lucien March, Wassily Leontief, Richard Stone, and A. F. W. Crome, as well as discussions of events connected with the Federal Reserve Bank and the U.S. Bureau of Labor Statistics. In addition, four "perspectives" placed throughout the volume consider the paths just covered and the vistas that lay ahead. The Age of Economic Measurement is the 2001 supplement to the journal History of Political Economy. All 2001 subscribers will receive a copy as part of their annual subscription.

The MIT Dictionary of Modern Economics, fourth edition Dec 09 2020 an up-to-date authoritative reference designed primarily for students of economics but invaluable also to students of business and other social sciences and ideal for anyone who wants a brief explanation of an economic concept or institution The MIT Dictionary of Modern Economics is an up-to-date, authoritative reference designed primarily for students of business and other social sciences and ideal for anyone who wants a brief explanation of an economic concept or institution. In this fourth edition one entry in ten has been revised and one entry in twenty is new. Whereas the third edition increased the coverage of American institutions, this edition breaks new ground by including entries considered important from an Eastern European perspective. It also supplies comparative statistics on major economic variables for selected countries, describes the origins of widely used acronyms, and includes bibliographic references at the end of featured entries. The dictionary answers in a clear and concise way the enduring questions, which economists have considered for two centuries or more, as well as the issues of the moment, such as economic change in Europe, the problems of pollution, or the prospects for greater freedom of trade. With close to 2,800 entries it is comprehensive in its coverage of theory, national and international institutions, schools of thought, and important economists, including recent Nobel Prize winners. The dictionary was compiled initially by an experienced team of economists at Aberdeen University in the United Kingdom, and new authors have been recruited to provide international expertise, reflecting changes in the structure of the international economy. This fourth edition was prepared by John Cairns, Robert Elliott, Jan McAviney, and Robert Shaw, all of the Economics Department, University of Aberdeen.

Principles and Problems of Modern Economics May 14 2021

International Macroeconomics May 26 2022 An essential introduction to one of the most timely and important subjects in economics International Macroeconomics presents a rigorous and theoretically elegant treatment of real-world international macroeconomic problems, incorporating the latest economic research while maintaining a microfounded, optimizing, and dynamic general equilibrium approach. This one-of-a-kind textbook introduces a basic model and applies it to fundamental questions in international economics, including the determinants of the current account in small and large economies, processes of adjustment to shocks, the determinants of the real exchange rate, the role of fixed and flexible exchange rates in models with nominal rigidities, and interactions between monetary and fiscal policy. The book confronts theoretical predictions using actual data, highlighting both the power and limits of given theories and encouraging critical thinking. Provides a rigorous and elegant treatment of fundamental questions in international macroeconomics Brings undergraduate and master's instruction in line with modern economic research Follows a microfounded, optimizing, and dynamic general equilibrium approach Addresses fundamental questions in international economics, such as the role of capital controls in the presence of financial frictions and balance-of-payments crises Uses real-world data to test the predictions of theoretical models Features a wealth of exercises at the end of each chapter that challenge students to hone their theoretical skills and scrutinize the empirical relevance of models Accompanied by a website with lecture slides for every chapter

Money, Commerce, and Economics in Late Medieval English Literature Jun 22 2019 This is the first collection of essays dedicated to the topics of money and economics in the English literature of the late Middle Ages. These essays explore ways that late medieval economic thought informs contemporary English texts and apply modern modes of economic analysis to medieval literature. In so doing, they read the importance and influence of historical records of practices as aids to contextualizing these texts. They also apply recent modes of economic history as a means to understand the questions the texts ask about economics, trade, and money. Collectively, these papers argue that both medieval and modern economic thought are key to valuable historical contextualization of medieval literary texts, but that this criticism can be advanced only if we also recognize the specificity of the economic and social conditions of late-medieval England.

Aquinas and the Market Jun 02 2020 Economists investigate the workings of markets and tend to set ethical questions aside. Theologians often dismiss economics, losing insights into the influence of market incentives on individual behavior. Mary L. Hirschfeld bridges this gap by showing how a humane economy can lead to the good life as outlined in the thought of St. Thomas Aquinas.

Issues in Contemporary Economics Mar 12 2021

Economic Geography Feb 20 2022 A revised and updated edition of the leading introductory text on the geography of economic life, from the local to the global Economic Geography is an engaging and accessible introduction to the different ways modern economic geographers understand, analyze, and interpret economic processes. This comprehensive text addresses significant questions relevant to contemporary economic life, from the activities of transnational corporations to issues surrounding workplaces and consumption. It encourages readers to explore how spatial patterns, places, networks, and territories shape large-scale economic processes. Accessible, highly-illustrated material presents fresh insights from the field—complemented by relatable, real-world examples that help students understand the social, cultural, and political contexts underpinning global economic processes. Now in its third edition, this extensively revised and updated textbook retains the features and thematic structure that have proved popular with students and instructors alike, while adding exciting new content. New chapters explore how the global economy and global development are institutionalized and governed, the economic geographies of global climate change, economic practices outside the capitalist mainstream, the role of migrants in labour markets, global production networks, and more. Introduces economic geography with a thematic approach including major concepts, current debates, and case studies Revised and updated to enhance international coverage, including three entirely new chapters on international development, alternative economies, and global climate change Substantial new content on labour migration, global production networks, and recent intellectual trends such as evolutionary economic geography Highly illustrated with diagrams and photographs closely integrated into the text Pedagogical aids including key case studies, learning objectives, text boxes, chapter essay questions, summaries, and further reading Core geographical concepts—such as place, networks and territory—are closely integrated into all chapters. Economic Geography: A Contemporary Introduction is an invaluable source of up-to-date knowledge for students new to the field, for those requiring a solid foundation, as well as for a broader academic and public readership with interest in this area of study.

Microeconomic Principles and Problems Dec 29 2019 Microeconomic Principles and Problems offers a comprehensive introduction to all major perspectives in

modern economics, including mainstream and heterodox approaches. Through providing multiple views of markets and how they work, it will leave readers better able to understand and analyse the complex behaviours of consumers, firms, and government officials, as well as the likely impact of a variety of economic events and policies. Most principles of microeconomics textbooks cover only mainstream economics, ignoring rich heterodox ideas. They also lack material on the great economists, including the important ideas of Adam Smith, Karl Marx, Thorstein Veblen, John Maynard Keynes and Friedrich Hayek. Mainstream books neglect the kind of historical analysis that is crucial to understanding trends that help us predict the future. Moreover, they focus on abstract models more than existing economic realities. This engaging book addresses these inadequacies. Including explicit coverage of the major heterodox schools of thought, it allows the reader to choose which ideas they find most compelling in explaining modern economic realities. Written in an engaging style focused on real world examples, this ground-breaking book brings economics to life. It offers the most contemporary and complete package for any pluralistic microeconomics class. ing explicit coverage of the major heterodox schools of thought, it allows the reader to choose which ideas they find most compelling in explaining modern economic realities. Written in an engaging style focused on real world examples, this ground-breaking book brings economics to life. It offers the most contemporary and complete package for any pluralistic microeconomics class.

The Nature and State of Modern Economics Jun 14 2021 What do modern academic economists do? What currently is mainstream economics? What is neoclassical economics? And how about heterodox economics? How do the central concerns of modern economists, whatever their associations or allegiances, relate to those traditionally taken up in the discipline? And how did economics arrive at its current state? These and various cognate questions and concerns are systematically pursued in this new book by Tony Lawson. The result is a collection of previously published and new papers distinguished in providing the only comprehensive and coherent account of these issues currently available. The financial crisis has not only revealed weaknesses of the capitalist economy but also highlighted just how limited and impoverished is modern academic economics. Despite the failings of the latter being more widely acknowledged now than ever, there is still an enormous amount of confusion about their source and true nature. In this collection, Tony Lawson also identifies the causes of the discipline's failings and outlines a transformative solution to its deficiencies. Amongst other things, Lawson advocates for the adoption of a more historical and philosophical orientation to the study of economics, one that deemphasizes the current focus on mathematical modelling while maintaining a high level of analytical rigour. In so doing Lawson argues for a return to long term systematic and sustained projects, in the manner pursued by the likes of Marx, Veblen, Hayek and Keynes, concerned first and foremost with advancing our understanding of social reality. Overall, this forceful and persuasive collection represents a major intervention in the on-going debates about the nature, state and future direction of economics.

Founder of Modern Economics: Paul A. Samuelson Apr 24 2022 Paul Samuelson was at the heart of a revolution in economics. He was "the foremost academic economist of the 20th century," according to the New York Times, and the first American to win the Nobel Prize in Economics. His work transformed the field of economics and helped give it the theoretical and mathematic rigor that increased its influence in business and policy making. In *Founder of Modern Economics*, Roger E. Backhouse explores the central importance of Samuelson's personality and social networks to understanding his intellectual development. This is the first of two volumes covering Samuelson's extended and productive life and career. This volume surveys Samuelson's early years growing up in the Midwest to his experiences at the University of Chicago and Harvard University, where leading scholars in economics and other disciplines stimulated and rewarded his curiosity. His thinking was influenced by the natural sciences and he understood that a critical, scientific approach increased insights into important social and economic questions. He realized that these questions could not be answered through rhetorical debate but required rigor. His "eureka" moment came, he said, when "a good fairy whispered to me that math was a skeleton key to solve age old problems in economics." Backhouse traces Samuelson's thinking from his early days to the publication of his groundbreaking book *Foundations of Economic Analysis and Economics: An Introductory Analysis*, which influenced generations of students. His work set the stage for economics to become a more cohesive and coherent discipline, based on mathematical techniques that provided surprising insights into many important topics, from business cycles to wage and unemployment rates, and from how competition influences trade to how tax rates affects tax collection. *Founder of Modern Economics* is a profound contribution to understanding how modern economics developed and the thinking of a revolutionary thinker.

Postmodern Moments in Modern Economics Dec 21 2021 Publisher Description

Introduction to Modern Economic Growth Sep 29 2022 Introduction to Modern Economic Growth is a groundbreaking text from one of today's leading economists. Daron Acemoglu gives graduate students not only the tools to analyze growth and related macroeconomic problems, but also the broad perspective needed to apply those tools to the big-picture questions of growth and divergence. And he introduces the economic and mathematical foundations of modern growth theory and macroeconomics in a rigorous but easy to follow manner. After covering the necessary background on dynamic general equilibrium and dynamic optimization, the book presents the basic workhorse models of growth and takes students to the frontier areas of growth theory, including models of human capital, endogenous technological change, technology transfer, international trade, economic development, and political economy. The book integrates these theories with data and shows how theoretical approaches can lead to better perspectives on the fundamental causes of economic growth and the wealth of nations. Innovative and authoritative, this book is likely to shape how economic growth is taught and learned for years to come. Introduces all the foundations for understanding economic growth and dynamic macroeconomic analysis Focuses on the big-picture questions of economic growth Provides mathematical foundations Presents dynamic general equilibrium Covers models such as basic Solow, neoclassical growth, and overlapping generations, as well as models of endogenous technology and international linkages Addresses frontier research areas such as international linkages, international trade, political economy, and economic development and structural change An accompanying Student Solutions Manual containing the answers to selected exercises is available (978-0-691-14163-3/\$24.95). Student Workbook in Modern Economics Feb 29 2020

The Methodology of Economics, Or, How Economists Explain Sep 25 2019 This book is an examination of the nature of economic explanation. The opening chapters introduce current thinking in the philosophy of science and review the literature on methodology. Professor Blaug then turns to the troublesome question of the logical status of welfare economics, giving the reader an understanding of the outstanding issues in the methodology of economics. This is followed by a series of case studies of leading economic controversies, which shows how controversies in economics may be illuminated by paying attention to questions of methodology. A final chapter draws the strands together and gives the author's view of what is wrong with modern economics. This book is a revised and updated edition of a classic work on the methodology of economics, in which Professor Blaug develops his discussion of the latest developments in macroeconomics, general equilibrium theory and international trade theory. A new section on the rationality postulate is also added.

Divine Providence in Early Modern Economic Thought Jan 28 2020 In this important volume, Joost Hengstmengel examines the doctrine of divine providence and how it served as explanation and justification in economic debates in the sixteenth, seventeenth and eighteenth centuries throughout Western Europe. The author discusses five different areas in which God was associated with the economy: international trade, division of labour, value and price, self-interest, and poverty and inequality. Ultimately, it is shown that the theological ideas continued to influence economic thought beyond the Medieval period, and that the science of economics as we know it today has theological origins. Interdisciplinary in nature, this book will be of interest to advanced students and researchers in the history of economic thought, the history of theology, philosophy and intellectual history.

Essays on: The Nature and State of Modern Economics Feb 08 2021 What do modern academic economists do? What currently is mainstream economics? What is neoclassical economics? And how about heterodox economics? How do the central concerns of modern economists, whatever their associations or allegiances, relate to those traditionally taken up in the discipline? And how did economics arrive at its current state? These and various cognate questions and concerns are systematically pursued in this new book by Tony Lawson. The result is a collection of previously published and new papers distinguished in providing the only comprehensive and coherent account of these issues currently available. The financial crisis has not only revealed weaknesses of the capitalist economy but also highlighted just how limited and impoverished is modern academic economics. Despite the failings of the latter being more widely acknowledged now than ever, there is still an enormous amount of confusion about their source and true nature. In this collection, Tony Lawson also identifies the causes of the discipline's failings and outlines a transformative solution to its deficiencies. Amongst other things, Lawson advocates for the adoption of a more historical and philosophical orientation to the study of economics, one that deemphasizes the current focus on mathematical modelling while maintaining a high level of analytical rigour. In so doing Lawson argues for a return to long term systematic and sustained projects, in the manner pursued by the likes of Marx, Veblen, Hayek and Keynes, concerned first and foremost with advancing our understanding of social reality. Overall, this forceful and persuasive collection represents a major intervention in the on-going debates about the nature, state and future direction of economics.

The Economics Book Mar 24 2022 All your complicated economic questions and theories explained by world experts. Economics is a broad topic and if you're not an economist by profession, your knowledge might be limited - until now! The Economics Book is your jargon-free, visual guide to understanding the production and distribution of wealth. Using a combination of authoritative, clear text, and bold graphics, this encyclopedia explores and explains big questions and issues that affect us all - everything from taxation, to recession, to the housing market and much more! By following an innovative visual approach, The Economics Book demystifies and untangles complicated theories. Make sense of abstract concepts through colourful graphics, fun facts, and step-by-step flow diagrams. Satisfy Your Hunger for Knowledge Dive deeper into the history of economics with this page-turning book! From the ancient Greeks to today, you'll discover over 100 key ideas from the world's greatest theorists, such as Thomas Malthus, John Maynard Keynes, and Milton Friedman. Fortunately, you don't need a degree in economics to gain this type of understanding. The Economics Book is your accessible guide to gaining tonnes of invaluable economic knowledge and learning how the economy shapes our world! This book will be your guide through the history of economics: - Let the Trading Begin 400 BCE - 1770 CE - The Age of Reason 1770 - 1820 - Industrial and Economic Revolutions 1820 - 1929 - War and Depressions: 1929 - 1945 - Post-War Economics 1945 - 1970 - Contemporary Economics 1970 - Present The Series Simply Explained With over 7 million copies sold worldwide to date, The Economics Book is part of the award-winning Big Ideas series from DK Books. It uses innovative graphics along with engaging writing to make complex subjects easier to understand.

Philosophy of Economics Jul 16 2021 "Philosophy of economics may be the first work to have successfully bridged serious economics in the twentieth century with modern Anglo-American philosophy, in particular the work of Wittgenstein. The book raises some of the central philosophical questions facing modern economics, especially to do with the scope of objective reasoning in the making of evaluative judgements, the appropriate role of economic expertise, and the status of the concepts and theorems of mathematical economics. It is argued that careful description of the particular case in the light of general principles may be a starting

point for analysis, even though there are no ultimate starting points. The work thus permits a sure and safe course to be found between scepticism and dogmatism for any project of economic inquiry." -- From publisher description.

Modern Economics Apr 12 2021 This is a substantial update of the classic *Modern Economics*. It has been updated to reflect recent developments in the field, and made more student-friendly with the addition of "Learning Objectives" at the start of chapters, chapter summaries and review questions at the end of chapters, and boxed examples and case studies incorporated throughout.

Lectures on Microeconomics Aug 29 2022 Economic concepts and techniques presented through a series of "big questions," models that show how to pose a questions rigorously and work toward an answer. This book helps readers master economic concepts and techniques by tackling fundamental economic and political questions through a series of models. It is organized around a sequence of "big questions," among them: When do markets help translate individuals' uncoordinated, selfish actions into outcomes that are best for all? Do markets change people, and, if so, for worse or better? Translated into the language of modern economics, do Marx's ideas have merit? Why is there so much income inequality? Or is there too little? The arguments are in the theorem-proof format, distinguishing results derived in the context of fully specified models from educated speculation. Readers will learn how to pose a question rigorously and how to work toward an answer, and to appreciate that even (especially!) the broadest and most ambitious questions call for a model. The goal of the book is not to indoctrinate but to show readers how to reason toward their own conclusions. The first chapter, on the Walrasian model of general equilibrium, serves as the prerequisite for the rest of the book. The remaining chapters cover less conventional topics, including the morality of markets; matching theory; Marxism, socialism, and the resilience of markets; a formalization of Kant's categorical imperative; unintended consequences of policy design; and theories of justice. The book can be used as a textbook for advanced undergraduate or graduate students or as a resource for researchers in disciplines that draw on normative economics.

Pioneers of Modern Economics in Britain May 02 2020 This volume contains a series of biographical essays on seven of the most influential economists in Britain since World War II. Each essay gives background details and a critical assessment of the economist's work, examining his or her impact on the development of modern economics.

Paul Samuelson and the Foundations of Modern Economics Jan 22 2022 Paul A. Samuelson was the first American Nobel Laureate in economics, and the second overall. He was credited for "the scientific work through which he has developed static and dynamic economic theory and actively contributed to raising the level of analysis in economic science." That recognition is now thirty years old and Samuelson remains at work in the cutting edge of the discipline. He is also widely known for a basic textbook that became a landmark learning tool throughout the second half of the twentieth century. This excellent collegial appreciation focuses heavily on Samuelson's *Foundations of Economic Analysis*. In that work, and a series of brief essays, he has contributed to an integration of statics and dynamics by way of the correspondence principle. He has also combined the multiplier and accelerator mechanisms in a model of economic fluctuations; he has reformed the foundations of consumption theory by his concept of revealed preferences; he has developed or improved several major theorems within international trade; and created theories of maximum efficiency and maximum growth rate. Finally, he has clarified the role of collective goods in resource allocation. In considering the work and life of Samuelson, editor Puttaswamaiah, has assembled a worthy group of brilliant commentators. Among the analytic papers in this volume are "An essay on the Accuracy of Economic Prediction" by L.R. Klein, "Analytical Aspects of Anti-Inflation Policy" by Robert M. Solow, a paper by Vitorangelo Orati on Samuelson's linkage to Schumpeter and Keynes, "Money and Price Theory by Carlo Benetti and Jean Cartelier, and a concluding essay on "The Role of Samuelson's Economics" by Michael Emmett Brady. Most unusual in works of this kind are some strong critical statements, including a pungent examination of vanity as well as creativity in Samuelson's work. What emerges is a clear picture of a special scholar. Scholars and students will welcome it alike-a result that well fits the purpose and character of Samuelson. The festschrift has its origins in several issues of the *International Journal of Applied Economics and Econometrics*. Professor K. Puttaswamaiah has more than three decades of editing journals in economics. He is a member of the journal, *Savings and Development* issued at the University of Milan. He is author of *Economic Development of Karnataka, Cost-Benefit Analysis, and Nobel Economists: Lives and Contributions*.

Institutions, Innovation, and Industrialization Jan 10 2021 This book brings together a group of leading economic historians to examine how institutions, innovation, and industrialization have determined the development of nations. Presented in honor of Joel Mokyr—arguably the preeminent economic historian of his generation—these wide-ranging essays address a host of core economic questions. What are the origins of markets? How do governments shape our economic fortunes? What role has entrepreneurship played in the rise and success of capitalism? Tackling these and other issues, the book looks at coercion and exchange in the markets of twelfth-century China, sovereign debt in the age of Philip II of Spain, the regulation of child labor in nineteenth-century Europe, meat provisioning in pre-Civil War New York, aircraft manufacturing before World War I, and more. The book also features an essay that surveys Mokyr's important contributions to the field of economic history, and an essay by Mokyr himself on the origins of the Industrial Revolution. In addition to the editors, the contributors are Gergely Baics, Hoyt Bleakley, Fabio Braggion, Joyce Burnette, Louis Cain, Mauricio Drelichman, Narly Dwarkasing, Joseph Ferrie, Noel Johnson, Eric Jones, Mark Koyama, Ralf Meisenzahl, Peter Meyer, Joel Mokyr, Lyndon Moore, Cormac Ó Gráda, Rick Szostak, Carolyn Tuttle, Karine van der Beek, Hans-Joachim Voth, and Simone Wegge. Joan Robinson and *Modern Economic Theory* Aug 24 2019 This and its companion volume, "The Economics of Imperfect Competition and Employment", are about Joan Robinson, her impact on modern economics, her challenges and critiques and the advances made in the science and art of economics.

Statistics and the German State, 1900-1945 Sep 05 2020 Considers statistical innovation, 1900-1945, in the Weimar Republic and the Third Reich.

Main Currents in Modern Economics Mar 31 2020 Main Currents in Modern Economics deserves to be the classic it is. At the time of its original publication in 1962, Ben Seligman, a scholar's scholar, had immersed himself in the development of economic thought since 1870. This product of his efforts is truly timeless. Why is Main Currents still modern and surprisingly up-to-date? For Seligman, the story begins with the revolt of German historical writers against the rigidity of classical doctrine, a natural starting point for contemporary theory. He takes us from the world of Thorstein Veblen to Galbraith's theory of countervailing power and the affluent society—worlds that he makes us understand are not so far apart., Seligman also shows us how the doctrines begin to repeat themselves. Tradition is reaffirmed with the rediscovery of marginalism by Jevons, the Austrians, and J. B. Clark. A more neutral version of "equilibrium economics" is supplied by Leon Walras and Vilfredo Pareto, a main current of thought extended by John R. Hicks and Paul A. Samuelson. Seligman characterizes the principal trait of modern doctrine as the use of technique for its own sake. Dismissing G.L.S. Shackle's writing on uncertainty, he criticizes Shackle's use of continuous rather than discontinuous function., Main Currents may have been published too soon to be fully appreciated. Seligman's focus on the thrust toward technique now has a ring of truth that can no longer be ignored. As Ray Canterbury notes in his introduction, in some respects only the names of the players have changed, and Main Currents' pertinence to today's issues is self-evident. Economics has moved so deeply into technique that the next generation may have to rediscover the past in order to find its way out. Seligman's book is a good place to begin the journey.

From New Era to New Deal Oct 26 2019 In popular imagery, Herbert Hoover is often stereotyped as a 'do-nothing' president who offered only nineteenth-century slogans for the greatest economic catastrophe in twentieth-century American history. Nothing could be further from the truth. This study examines the properties of an innovative approach to economic growth and stability formulated by Hoover and his associates during his years as secretary of commerce (1921-9) and inspects his deployment of this strategy from the White House following the Great Crash in the autumn of 1929. Attention is then focused on Hoover's attempts to reformulate his macro-economic programme as the depression deepened in late 1931 and 1932. Archival materials provide arresting insights into Hoover's aspirations for a new institution - the Reconstruction Finance Corporations - as a vehicle for stimulating investment through a novel form of 'off-budget' financing. To complement the discussion of Hoover's theories of economic policy in their various manifestations, the views of contemporary economists on problems of the day are surveyed.

Arrow and the Ascent of Modern Economic Theory Nov 19 2021 This and the companion volume are about the ascent, vicissitudes and lacunae in the science and art modern economics and about Kenneth Arrow, his architectonic contributions to and impact on the theoretical and applied economics and moral and political philosophy of our age. They provide a comprehensive composite analysis of Arrow's approach and contributions to and his impact on modern economics and philosophy seen from various forms. In addition to original essays that not only analyse Arrow's contributions and impact, but provide insights into what is being done at the frontiers of the subject, these volumes contain interview chapters that afford extraordinary glimpses into the creativity and personality of the major contributors to the economics of our age (including our protagonist) and are an important historical document.

William Stanley Jevons and the Making of Modern Economics Aug 05 2020 This book examines William Stanley Jevons's role in revolutionizing nineteenth-century economics.

Economic Anthropology Oct 07 2020 This book is a new introduction to the history and practice of economic anthropology by two leading authors in the field. They show that anthropologists have contributed to understanding the three great questions of modern economic history: development, socialism and one-world capitalism. In doing so, they connect economic anthropology to its roots in Western philosophy, social theory and world history. Up to the Second World War anthropologists tried and failed to interest economists in their exotic findings. They then launched a vigorous debate over whether an approach taken from economics was appropriate to the study of non-industrial economies. Since the 1970s, they have developed a critique of capitalism based on studying it at home as well as abroad. The authors aim to rejuvenate economic anthropology as a humanistic project at a time when the global financial crisis has undermined confidence in free market economics. They argue for the continued relevance of predecessors such as Marcel Mauss and Karl Polanyi, while offering an incisive review of recent work in this field. *Economic Anthropology* is an excellent introduction for social science students at all levels, and it presents general readers with a challenging perspective on the world economy today. Selected by Choice as a 2013 Outstanding Academic Title

History of Economic Thought Jul 04 2020

The Puzzle of Modern Economics Nov 27 2019 Does economics hold the key to everything or does the recent financial crisis show that it has failed? This book provides an assessment of modern economics that cuts through the confusion and controversy on this question. Case studies of the creation of new markets, the Russian transition to capitalism, globalization, and money and finance establish that economics has been very successful where problems have been well defined and where the world can be changed to fit the theory, but that it has been less successful in tackling bigger problems. The book then offers a historical perspective on how economists have, since the Second World War, tried to make their subject scientific. It explores the evolving relationship between science and ideology and investigates the place of heterodoxy and dissent within the discipline.

Great Economists Since Keynes Oct 19 2021 These vignettes offer an account of each of a range of economists who followed Keynes. Those covered include James

Tobin, Arrow and his impossibility theorem and others.

What are the Questions and Other Essays: Further Contributions to Modern Economics Oct 31 2022 A study of environmental degradation, this work presents the environmental problems of South Korea. The effects of rapid industrialisation and modernisation are documented along with the choices and actions which are available to the country.

Relational Anthropology for Contemporary Economics Nov 07 2020 This open access book offers a multidisciplinary dialogue on relational anthropology in contemporary economics. A particular view of the human being is often assumed in economic models, but seldom acknowledged let alone explicated. Addressing this neglected area of research in economic studies, altogether the contributors touch upon the importance and potential of virtues, the notions of freedom and self-love, the potential of simulation models, the dialectics of love, and questions of methodology in constructing a relational anthropology for contemporary economics. The overall result is a highly informative and constructive dialogue, establishing inter alia a research agenda for future collaborative and multidisciplinary study.

Otto Neurath's Economics in Context Jul 28 2022 Otto Neurath (1882-1945) was a highly unorthodox thinker both in philosophy and economics. The contributions to this sparkling new book conclude that Neurath touched on many of the most critical problems of economic theory during its formative years as a modern discipline. His economics provide insights into the foundational problems of modern economics and should encourage contemporary economic theorists to critically reflect their own hidden presumptions.

A Guide to Modern Economics Jul 24 2019 This work provides a valuable review of the most important developments in economic theory and application over the last decade. Comprising twenty-seven specially commissioned overviews, the volume presents a comprehensive and student-friendly guide to contemporary economics. Previously published by Routledge as part of the Companion to Contemporary Economic Thought, these essays are made available here for the first time in a concise paperback edition. A Guide to Modern Economics will be a valuable guide to all those who wish to familiarize themselves with the most recent developments in the discipline.

Social Ontology and Modern Economics Aug 17 2021 Economists increasingly recognise that engagement with social ontology - the study of the basic subject matter and constitution of social reality - can facilitate more relevant analysis. This growing recognition amongst economists of the importance of social ontology is due very considerably to the work of members of the Cambridge Social Ontology Group. This volume brings together important papers by members of this group, some previously unpublished, in a collection that reveals the breadth and vitality of this Cambridge project. It provides a brilliant introduction to the central themes explored, perspectives sustained, insights achieved and how the project is moving forward. An initial set of papers examine how ontology is understood and justified within this Cambridge project and consider how it compares with prominent historical and contemporary alternatives. The majority of the included papers involve social ontological analysis being put to work directly in underlabouring for specific types of development in economics. The papers are grouped according to their contribution to clarifying and developing (i) various competing traditions and projects of modern economics, (ii) history of thought contributions, (iii) methodological concerns, (iv) ethics and (v) conceptions of particular aspects of social reality, including money, gender, technology and institutions. Background to and a brief history of the Cambridge group is provided in the Introduction. Social Ontology and Modern Economics will be of interest not only to economists but also philosophers of social science, social theorists and those eager to explore the nature of gender, social institutions and technology.
