insights which should be beneficial to any sensitive scientist and makes it available to the English-speaking world for the recognition it deserves. "The path which led Gebser to his new and universal perception of the world is, briefly, as follows. In the wake of materialism and social change, man had been described in the early years of our century as the "dead end" of nature. Freud had redefined culture as illness—a result of drive sublimation; Klages had called the spirit (and he was surely speaking of the hypertrophied intellect) the "adversary of the soul," propounding a return to a life

like that of the Pelasgi, the aboriginal inhabitants of Greece; and Spengler had declared the "Demise of the West" during the years following World War I. The consequences of such pessimism continued to proliferate long after its foundations had been superseded. It was with these foundations—the natural sciences—that Gebser began. As early as Planck it was known that matter was not at all what materialists had believed it to be, and since 1943 Gebser has repeatedly emphasized that the so-called crisis

of Western culture was in fact an essential restructuration.... Gebser has noted two results that are of particular significance: first, the abandonment of materialistic determinism, of a one-sided mechanistic-causal mode of thought; and second, a manifest "urgency of attempts to discover a universal way of observing things, and to overcome the inner division of contemporary man who, as a result of his one-sided rational orientation, thinks only in dualisms." Against this background of recent discoveries and conclusions in the natural sciences Gebser discerned the

potential human universality. He also sensed the necessity to go beyond the confines of this first treatise so as to include the humanities (such as political economics and sociology) as well as the arts in a discussion along similar lines. This was the point of departure of The Ever-Present Origin. From In memoriam Jean Gebser by Jean Keckeis

experience as a teacher and using his building designs as examples, the author shows us that buildings are not objects but organisms, and cities are not machines but complex ecosystems. Fleeing Holland just weeks before Hitler's invasion, the Van der Ryn family settled in the outskirts of New York City. Young Sim grew up exploring the tiny pockets of grass, puddles, and swamps he found in Queens. An avid high school art student, he progressed to studying architecture in college. But he found the pervading modernist-style buildings to be

emotionally cold and lacking human sensitivity. He longed for a way to restore architecture back to life. His breakthrough came during the frequent campus visits of R. Buckminster Fuller, who inspired him to think and design with the geometries of the natural world. Design for Life shows how the young architect began to look at the world with new eyes and saw the shifting patterns in nature and how these patterns profoundly affect how we live and work in the structures we build. Using his own projects and teaching experiences as examples, the author reveals the evolution of his

thinking and the emergence of a new process of collaborative design that honors the buildings' users and connects them to the Earth. The book shows how architecture has created physical and mental barriers that separate us from our world, but how we can recover the soul of architecture and reconnect with our natural surroundings. Sim Van der Ryn is the president of Van der Ryn Architects, a Northern California firm known for its work in sustainable architecture. He taught architecture and design at the University of California, Berkeley, for over 30 years, inspiring

a new generation to create buildings and communities that are sensitive to place, climate, and the flow of human interactions. Appointed California State Architect in the 1970s by then-Governor Jerry Brown, Van der Ryn introduced the nation's first energy-efficient government building projects. His vision and persuasive skills heralded a golden age of ecologically sensitive design and resulted in the adoption of strict energy standards and disability access standards for all state buildings and parks. As the author of six groundbreaking books about

planning and design, including Sustainable Communities (1986, with Peter Calthorpe), Ecological Design (1996, with Stuart Cowan) and numerous articles, Van der Ryn has helped inspire architects to see the myriad ways they can apply physical and social ecology to architecture and environmental design. The author lives and works in Northern California, across the Golden Gate Bridge from San Francisco.

issues that humanity faces. While conventional top-down, outside-in development has reached a cul-de-sac, a new, integral form of development is emerging around the world. Integral Development uniquely articulates this emergent approach, and invites us to fully participate in this process. The integral approach has been researched and framed over decades of in-depth experience in transformative development education and practice all over the world. It uniquely combines four mutually reinforcing perspectives: nature and

community; culture and spirituality; science, systems and technology; and enterprise and economics. Conventional development theory and practice has prioritized the latter two perspectives, neglecting the former two. This has caused massive imbalances in today's world. The four interconnected perspectives allow for a transformative and integrated engagement with core development issues in a way that is locally relevant and globally resonant. Throughout, the practical impact of Integral Development is brought to life through highly innovative cases.

A Secret History of Consciousness

Aug 27 2022 For the last four centuries, science has tried to account for everything in terms of atoms and molecules and the physical laws they adhere to. Recently, this effort was extended to try to include the inner world of human beings. Gary

Lachman argues that this view of consciousness is misguided and unfounded. He points to another approach to the study and exploration of consciousness that erupted into public awareness in the late 1800s. In this "secret history of consciousness," consciousness is seen not as a result of neurons and molecules, but as responsible for them; meaning is not imported from the outer world, but rather creates it. In this view, consciousness is a living, evolving presence whose development can be traced through different historical periods, and which evolves along a path

more expansive state. What that consciousness may be like and how it may be achieved is a major concern of this book. Lachman concentrates on the period since the late 1800s, when Madame Blavatsky first brought the secret history out into the open. As this history unfolds, we encounter the ideas of many modern thinkers, from esotericists like P. D.

spirituality's deepest mystery-- what consciousness is, how it works, and why it's important. Christian de Quincey presents seven simple steps for understanding consciousness and how it can lead to spiritual awareness: observe your language, identify the problem, learn how to look, recognize your patterns, know yourself, embrace your shadow, and practice transformation. All of us exhibit both shadow and light, aspects of ourselves we fear and deny (our inner Zombies) as well as qualities we admire and want to radiate (our inner Angels). The key to a creative and fulfilled life is

Readers will learn the difference between "energy talk" and "consciousness talk"; how the body affects the mind, and vice versa; and where to go for help to develop consciousness, heal emotions, or grow spiritually. De Quincey shows how to recognize and break habits and patterns that run your life, how to find out who you really are, and why facing up to your darkest fears will liberate your brightest light as you learn to embrace all of your humanity and

Education, however, is about more than teaching children skills for earning a living and how to function in life. It is really a means of transmitting both a culture and a heritage. William Irwin Thompson, one of today's most innovative interdisciplinary thinkers, talks about how to transform a cultural legacy in the course of transmitting it. His visionary approach takes education far beyond the

He not only presents a far-reaching system of knowledge and teaching, but also suggests how we can stimulate the best and healthiest patterns of development in our children and teenagers. What happened in the human lineage over the last three million years that made us into a near-geologic force capable of altering the face of our planet and threatening our own existence? In *Emerging World*, Roger Briggs explores the evolution of consciousness and shows that this is behind everything humans have done, are now doing, and are capable of in the future. By bringing together the best knowledge from paleoanthropology, cultural philosophy, cognitive psychology, and evolutionary theory, Briggs makes the

case that humanity is now on the verge of a major transformation, a monumental turning point in our story. Foreseen by many sages and scholars, this anticipated leap promises a new era of history and culture, and a new civilization on Earth in which the needs of all people are met and we become stewards of our living planet. Yet this is by no means guaranteed.

Emerging World offers a new understanding of our crisis today and points the way to a bright future for humanity and life on our planet.

The Ecstatic and the Archaic Feb 21

2022 The word 'archaic' derives from the Greek *arkhaios*, which in turn is related to the word *archē*, meaning 'principle', 'origin', or 'cause'; the notion of ecstasy, or *ekstasis*, implies standing outside or beyond oneself, a self-transcendence. How these two concepts are articulated and co-implicated constitutes the core question underlying this edited collection, which examines both the present day and antiquity in order to

trace the insistent presence of the ecstatic amid the archaic. Presented in three parts, the contributors to this diverse book take the concept of the archaic in an entirely new direction. Part I, 'Ecstasy and the psychological', covers topics including Jung, Freud, ancient psychotherapy, desire, and theatre. Part II, 'Ecstatic-archaic history', considers Ludwig Klages, Orestes and Dionysus. Finally, Part III, 'Ancient ecstatic in other worlds', examines Luo Guanzhong's Three Kingdoms and Enki at Eridu. The collection offers a distinctive contextualisation of the dimension of

l adaptations found in any biology textbook, though these are necessarily discussed in a general way. Its primarily concerned with consciousness, with what the organism experiences. Just how far back into evolutionary history consciousness extends, of course, is a highly controversial issue, and one which we will probably never resolve with certainty. We know we are conscious, and most people would probably extend consciousness to other mammals, but when it comes to lower vertebrates, let alone invertebrates, there is no consensus. This book takes a

what if approach. What if all forms of existence were conscious to some extent, a view known as panpsychism or panexperientialism? Based on those aspects of their function and behavior that we can actually observe and measure, what can we say about what this consciousness is like? The resulting story is one in which consciousness becomes increasingly more complex over evolutionary history, yet is based on facts of animal behavior that any reader, regardless of personal views on consciousness, can accept. In order to simply a vast amount of scientific

literature, the book focuses on two general properties of consciousness and its behavioral manifestations: the experience of an outer world embedded in space and time; and that of an inner self that is defined by its relationship to other organisms. Two key claims made are that 1) dimensions of externally-perceived space and time have emerged more or less one at a time over the course of evolutionary history; and 2) the number of spatial/temporal dimensions experienced by any organism in the outer world is closely related to experienced inner dimensions in its

relationships with other organisms. For example, the simplest invertebrate organisms experience one dimension of space, in the form of intensity discriminations made of simple stimuli such as light, touch and chemical substances. Closely correlated with this one-dimensional experience of the outer world is the ability to make simple self-other discriminations, in which the organism in effect distinguishes itself one-dimensionally from the outer world. Somewhat more evolved invertebrates, such as arthropods, experience two dimensions of

space, their perception being largely limited to shapes, contrasts, and surfaces. They can also distinguish between two dimensions in their relationships with other organisms, as exhibited in the ability to discriminate such classes of other as male vs. female and kin vs. non-kin. The most highly evolved invertebrates, as well as all vertebrates, experience additional dimensions of space and/or time and make still finer discriminations among other organisms. The evolutionary story is not confined to organisms, however. The book argues that the same

dimensional relationships exist on lower levels of existence. Thus there are atoms that recognize and interact with other atoms in various degrees of dimensions, and there are cells that recognize and interact with other cells in different numbers of dimensions. Again, the minimal claim being made is that the function and behavior of these lifeforms can be understood in terms of dimensions, while leaving it up to individual readers to decide whether this could reflect a similar dimensionality of consciousness. and the Rise of the Pocket God explores the relationship between modern religion and ancient values. Journey through the bucolic fields of the ancient villager, en route to the concrete jungles and splendid skylines of the modern city-goer. See what wedded the ancient believer to his God and his fellow believers. Then glimpse the growing chasm between the modern believer, her society, and her Father. And, in the end, see what us modern folks can do to attain an ancient-like communion with the Lord.

Cultural Politics in Modern India

May 24 2022

India's global proximities derive in good measure from its struggle against British imperialism. In its efforts to become a nation, India turned modern in its own unusual way. At the heart of this metamorphosis was a "colourful cosmopolitanism," the unique manner in which India made the world its neighbourhood. The most creative thinkers and leaders of that period reimagined diverse horizons.

not only in widespread anti-colonial struggles but also in articulating the vision of alter-globalization, universalism, and cosmopolitanism. This book, in revealing this dimension, offers new and original interpretations of figures such as Kant, Tagore, Heidegger, Gandhi, Aurobindo, Gebser, Kosambi, Narayan, Ezekiel, and Spivak. It also analyses cultural and aesthetic phenomena, from the rasa theory to Bollywood cinema, explaining how Indian ideas, texts, and cultural expressions interacted with a wider world and contributed to the making of modern

Architecture is a Verb Jan 20 2022

Architecture is a Verb outlines an approach that shifts the fundamental premises of architectural design and practice in several important ways. First, it acknowledges the centrality of the human organism as an active participant interdependent in its environment.

Second, it understands human action in terms of radical embodiment—grounding the range of human activities traditionally attributed to mind and cognition: imagining, thinking, remembering—in the body. Third, it asks what a

is, extends the performative functional interpretation of design to interrogate how buildings move and in turn move us, how they shape thought and action. Finally, it is committed to articulating concrete situations by developing a taxonomy of human/building interactions. Written in engaging prose for students of architecture, interiors and urban design, as well as practicing professionals, Sarah Robinson offers richly illustrated practical examples for a new generation of designers.

In, Drift Off: Ambient Music's Psychedelic Past rethinks the history and socioaesthetics of ambient music as a popular genre with roots in the psychedelic countercultures of the late twentieth century. Victor Szabo reveals how anglophone audio producers and DJs between the mid-1960s and century's end commodified drone- and loop-based records as "ambient audio": slow, spare, spacious audio sold as artful personal media for creating atmosphere, fostering contemplation, transforming awareness, and stilling the body. The book takes a trip through landmark ambient

audio productions and related discourses, including marketing rhetoric, artist manifestos and interviews, and music criticism, that during this time plotted the conventions of what became known as ambient music. These productions include nature sounds records, experimental avant-garde pieces, "space music" radio, psychedelic and cosmic rock albums, electronic dance music compilations, and of course, explicitly "ambient" music, all of which popularized ambient audio through vivid atmospheric concepts. In paying special attention to the **Where To Download dl3.pling.com on November 30, 2022 Read Pdf Free**

ambient audio; to ambient audio's relationship with the psychedelic, New Age, and rave countercultures of the US and UK; and to the coincident evolution of therapeutic audio and "head music" across alternative media and independent music markets, this history resituates ambient music as a hip highbrow framing and stylization of ongoing practices in crafting audio to alter consciousness, comportment, and mood. In so doing, Turn On, Tune In, Drift Off illuminates the social and aesthetic rifts and alliances informing one of today's most popular musical experimentalisms.

Companion to Migration, Communication, and Politics Dec 19 2021 The Routledge Companion to Migration, Communication and Politics brings together academics from numerous disciplines to show the legal, political, communicative, theoretical, methodological, and media implications of migration. The collection makes the compelling case that migration does not occur in a vacuum; rather, it is driven by and reacts to various factors, including the political, economic, and cultural worlds in which individuals live. The 25 chapters reveal the complex nature of migration from

various angles, not only looking at how policy affects migrants but also how individuals and marginalized groups are impacted by such acts. In Part I contributors examine migration law, debating the role of the state in managing migration flows and investigating existing migration policy. Part II offers theories and methods that integrate communication studies, political science, and law into the study of migration, including cultural fusion theory and Gebserian theory. Part III looks at how contemporary perceptions of migration and mig

with media representations across media outlets worldwide. Finally, Part IV offers case studies that present the intricacies of migration within different cultural, national, and political groups. Migration is the key political, economic, and cultural issue of our time and this companion takes the next step in the debate; namely, the effects of the how, in addition to the how and why. Researchers and students of communication, politics, media, and law will find this an invaluable intervention.

Consciousness and Culture Apr 23 2022 Jean Gebser was one of the most original and influential thinkers of the 20th century, though this work is the first collection of essays on Gebser to appear in English. The work begins with an analysis of Gebser's mode of inquiry and notes the distinguishing features of his theory of culture. The chapters that follow, each written by experts in a range of fields, explore Gebser's impact on the physical sciences, fine arts, popular culture

subsequently lived in Spain where he was attached to the Ministry of Education of the Spanish Republic. From 1937-1939 he lived in Paris in the circle which included Picasso, Andre Malraux, Paul Eluard, and Louis Aragon. In 1939 he made his permanent home in Switzerland where he became a citizen in 1951. For many years Gebser was Lecturer at the Institute of Applied Psychology in Zurich and was later appointed honorary Professor of Comparative Studies of Civilization at the University of Salzburg, Austria. For his many publications, including books on Rilke, his friend

Federico Garcia Lorca, recent developments in the sciences, East-West relations, evolution, and twentieth century civilization and its antecedents, Gebser received several prizes, including a share of the German Schiller prize, the literary award of the Esslingen Artist's Guild, the Koggen prize of the City of Minden, and the literary award of the City of Berne. He died in Berne on May 14, 1973."

lives of contemporary human beings. 2012 is about us on planet Earth at this time. December 21, 2012: will the world really change forever on this date, the end of a 5,125-year calendar last used over a thousand years ago? Certainly Hollywood would like you to think so. Indeed, a not-so-small industry has arisen around the date, hawking everything from t-

shirts to teleseminars. Clearing a path between fantasy and reality, Alexandra Bruce surveys the entire 2012 landscape, asking questions such as: Is the Earth losing its Mojo? How did 2012 come to mean "The End of Time"? Did psychedelics facilitate the Maya "Cosmovision"? Should we worry about Earth Crustal Displacement? What the hell is

"Planet X"? Uniquely amongst a vast array of 2012 literature, this book features interviews with the leading experts—including Graham Hancock, John Major Jenkins, Daniel Pinchbeck and many others—and insightful, detailed analysis of the broad spectrum of opinion, debate, research and myth regarding the most compelling "end times" prediction of the 21st century.
