Knowledge in a Social World Mar 22 2022 Knowledge in a Social World offers a philosophy for the information age. Alvin Goldman explores new frontiers by creating a thoroughgoing social epistemology, moving beyond the traditional focus on solitary knowers. Social, cultural, and technological changes present new challenges to our ways of knowing and understanding, and philosophy must face these challenges. Against the tides of postmodernism and social constructionism Goldman defends the integrity of truth and shows how to promote it by well-designed forms of social interaction. He urges that social discourse promises more than the mere politics of consensus, and that suitably norm-governed debate and belief-revision can increase veridical knowledge. Goldman's aims are not just philosophical but practical. From

science to education, from law to democracy, he shows why and how public institutions should seek knowledge-enhancing practices. He examines how cyberspace and other technologies expand the scope of communication, and warns of the need to safeguard content quality. He scrutinizes the free marketplace of ideas, the adversary system in the law, and media coverage of political campaigns. The result is a bold, timely, and systematic treatment of the philosophical foundations of an information society.

Applied Leadership Aug 15 2021 'Applied Leadership: A Synthesis of Theory & Practice' is a holistic view of leadership. It highlights myths and misperceptions existing about leadership and their negative impact on the practical application. The book discusses existing theories of leadership, analyzes strengths of individual theories, and their weaknesses in providing a holistic view of leadership, leading to a need for a holistic approach to leadership. The book builds up a holistic model and plugs in the existing theories to develop a bigger picture. The cardinals of the holistic model are then discussed as individual chapters from theoretical as well as practical aspects of leadership. The discussion of individual cardinals is finally translated into an applied leadership model that presents a comprehensive view of leadership, bridges the theory-practice gap and can be used as a framework for researchers and practitioners of leadership.

QUANTITATIVE TECHNIQUES FOR MANAGERIAL DECISIONS Nov 06 2020 This book is specially designed for a course in Quantitative Techniques taught to MBA students. It provides the students with a thorough introduction to basic quantitative tools required to perform analytical evaluations and arrive at logical decisions. The second edition of the book essentially retains the flavour of the first edition. Concepts have been explained in an easy to understand language and emphasis is on practical applications rather than rigorous mathematical treatment. As far as possible, detailed proofs and axioms associated with pure mathematics have been avoided. The text in the second edition has been suitably modified for giving

better clarity. Nearly fifty solved examples have been added to various chapters to enable students to understand the nuances of problem solving. Fifty unsolved problems have also been added to give ample scope to the student for practice. The book also includes chapters on transportation models, assignment models and network analysis. KEY FEATURES : Learning objectives at the beginning of each chapter enable students to focus on important points of a chapter. Case studies and real life problems to connect students to the real-world situations. Worked examples to enhance student comprehension of the subject. Numerous well-balanced chapter-end exercises with answers to help students attain confidence and master the concepts. Illustrations on solutions to problems with the help of computer software. Summary at the end of each chapter to help students review the key concepts.

Lights Out (The SNAP Agency Book #1) Jul 02 2020 CIA analyst Brynn Taylor developed a new program to combat terrorism, and she invited members of foreign intelligence agencies to America to foster cooperation between countries. Now one of them, Egyptian spy Remon Riad, is missing. Jack Hudson has been working for the Strategic Neutralization and Protection Agency (SNAP) for almost nine years and takes the lead in

hunting down the missing spy. But he isn't at all pleased to find out Brynn is involved. It's hard to trust a woman who's already betrayed you. Every lead they follow draws them dangerously deeper into an international plot. Kidnapping, murder, explosions, poisoning--the terrorists will do anything to accomplish their goal of causing a digital blackout that will blind a strategic US military communications center and throw the world into chaos. Can Brynn surrender control to a man who doesn't trust her? And can Jack ever get over what she did to him? The fate of the world--and their hearts--hangs in the balance.

The ECSQARU conferences are biennial and have become a major forum for advances in the theory and practice of r- soning under uncertainty. The ?rst ECSQARU conference was held in Marseille (1991), and after in Granada (1993), Fribourg (1995), Bonn (1997), London (1999), Toulouse (2001) and Aalborg (2003). The papers gathered in this volume were selected out of 130 submissions, after a strict review process by the members of the

Program Committee, to be presented at ECSQARU 2005. In addition, the conference included invited lectures by three outstanding researchers in the area, Seraf ? ?n Moral (Imprecise Probabilities), Rudolf Kruse (Graphical Models in Planning) and J ? erˆ ome Lang (Social Choice). Moreover, the application of uncertainty models to real-world problems was addressed at ECSQARU 2005 by a special session devoted to s- cessful industrial applications, organized by Rudolf Kruse. Both invited lectures and papers of the special session contribute to this volume. On the whole, the programme of the conference provided a broad, rich and up-to-date perspective of the current high-level research in the area which is re?ected in the contents of this volume. Managing Your Competencies Aug 23 2019 A competency is a combination of knowledge, skills and attitude that one needs in order to function adequately in any given professional situation – a nurse must know how to give a crying child a vaccination, and a policeman must be able to stop a drunken brawl. Competency orientated teaching has become an important objective in higher education. To meet this objective, an individual personal development plan (PDP) is indispensable. PDPs are based on what one knows about one's own skills and what one needs to acquire for one's future profession. Managing Your Competencies shows the reader how to go about drawing up a PDP.

Robust Control System Design Oct 29 2022 This book presents a synthesized design principle versus the existing separation principle of modern control theory of over six decades since the start. Guided by this new principle, a generalized state feedback control can be designed based on the parameters of observer and for a great majority of plant systems, and the robust property of this control can be fully realized. The robust property of the existing state feedback control which is designed separate from the parameters of its realizing observer, cannot be realized for a great majority of plant systems. By freely design and adjust the observer order, the corresponding generalized state feedback control can unify completely the existing state feedback control and static output feedback control, and can adjust effectively the tradeoff between performance and robustness. This generalized state feedback control can assign eigen-structure, and can improve performance

and robustness far more effectively than the control designed using classical control theory. Equally significant, the results of this book are very simple that can be comprehended and grasped very easily. These results are introduced and illustrated from the basic level, and use only the basic mathematical tools. Ample examples and exercise problems that can be solved by hand computation, are provided. This third edition made substantial improvement on this aspect. Modern control theoreticians only formulated the feedback control design problem in various ways, the point however is to really solve this problem.

Curriculum Models for the 21st Century Jan 08 2021 Changing student profiles and the increasing availability of mainstream and specialized learning technologies are stretching the traditional face-to-face models of teaching and learning in higher education. Institutions, too, are facing far-reaching systemic changes which are placing strains on existing resources and physical infrastructure and calling into question traditional ways of teaching through lectures and tutorials. And, with an ever-increasing scrutiny on teaching and teachers' accountability for positive educational outcomes, the call for closer attention to learning, teaching and, most especially, to the design and delivery of the curriculum is given increasing relevance and importance. Research provides strong evidence of the potential for technologies to facilitate not only cognition and learning but also to become integral components in the redesign of current curriculum models. Some Universities and individual academics have moved along this pathway, developing new and innovative curriculum, blending pedagogies and technologies to suit their circumstances. Yet, there are others, unsure of

the possibilities, the opportunities and constraints in these changing times. Curriculum Models for the 21st Century gives insights into how teaching and learning can be done differently. The focus is on a whole of curriculum approach, looking at theoretical models and examples of practice which capitalize on the potential of technologies to deliver variations and alternatives to the more traditional lecture-based model of University teaching.?

Fundamentals of Computer Vision Sep 16 2021 Computer vision has widespread and growing application including robotics, autonomous vehicles, medical imaging and diagnosis, surveillance, video analysis, and even tracking for sports analysis. Topics of importance and interest to scientists are presented in a thoughtful and thought-provoking way, with coverage ranging from high-level object-oriented software to low-level machine-code operations. Taking a problem-solving approach, this book gives the reader an insight into the ways programs are implemented and what actually happens when they run. Throughout, the importance of good programming style is emphasised and illustrated. Two languages, Fortran 90 and C++, are used to provide contrasting examples, and explain how various techniques are used and when they are appropriate or inappropriate. For scientists and engineers needing to write programs of their own or understand those written by others, Computing for Scientists: * Is a carefully written introduction to programming, taking the reader from the basics to a considerable level of sophistication. * Emphasises an understanding of the principles and the development of good programming skills. * Includes optional "starred" sections containing more specialised and advanced material for the more ambitious reader. * Assumes no prior knowledge, and has many examples and exercises with solutions included at the back of the book.
